 Waterspout

 10/24/15 13:00 CST
 0
 Source: Public

The waterspout was reported off the Galveston Island coast near the town of Jamaica Beach.

A developing surface low off the middle Texas coastline tapped into the moisture from the remnants of Hurricane Patricia. As this low moved up the upper Texas coast it produced moderate to heavy rainfall that lead to southeastern Texas flooding. Within a better sheared downstream environment, isolated storms that formed along this low's leading warm frontal boundary produced tornadoes and waterspouts. In addition to the heavy rainfall, strong east northeast winds over much of the week resulted in minor coastal flooding along western Galveston Bay.

TEXAS, Central Southeast

 Source: Local Official

There was widespread flooding around the city of Houston. There were numerous reports of flooded and impassable roadways with submerged vehicles. Vehicles were submerged near Fondren Road and the Highway 59 southwest freeway as well as in the Galleria area. The Katy exit ramp to the north freeway was closed due to high water. Interstate 45 at North Shepherd had two feet of water flowing across all lanes. Highway 59 at the 610 Loop interchange was closed due to high water. There was also high water reported over Clay Road at North Eldridge in Bear Creek Pioneers Park that was blocking traffic. Sections of Memorial Drive near Bagby Street were closed due to high flood waters. All entrances to downtown Houston off of Interstate 45 were closed due to high water over the roadways. Eastbound Interstate 10 was closed due to high water near White Oak Bayou.

Injuries Crop Dmg

A strong upper level storm system, combined with high moisture levels to produce a bands of excessive rainfall that caused flash flooding across Fort Bend, Harris and Liberty Counties. Thunderstorms rapidly developed shortly after midnight on the 31st over Matagorda and Fort Bend Counties and moved into Harris County around 1:00 a.m. The thunderstorms trained or moved over the same areas between 1:00 a.m. and 4:00 a.m. with significant rainfall occurring over the southwest and south-central portions of Harris County into the east-central part of the county. After a brief break between 5:00 a.m. and 8:00 a.m. an additional round of thunderstorms slowly moved across Harris County from west to east producing additional heavy rainfall and worsening ongoing flooding conditions. Saturated grounds from previous heavy rainfall the week before coupled with intense short term rainfall rates resulted in widespread flooding. There was one confirmed flood related death and one possible flood related death.

BRAZORIA COUNTY --- 0.9 WSW JONES CREEK [28.97, -95.44], 0.8 NNW JONES CREEK [28.98, -95.44]

10/31/15 02:29 CST 50K Tornado (EF1, L: 1.20 mi , W: 40 yd) 10/31/15 02:34 CST 0 Source: NWS Storm Survey

A small EF-1 tornado moved from a wildlife management area one mile southwest south of Jones Creek where it uprooted several large trees. The tornado then crossed Highway 36 and severely damaged a mobile home just north of the roadway. The tornado caused minor damage for approximately a mile toward the northeast before reaching the Brazos River, or one mile northeast of Jones Creek. Estimated peak wind speed was 90 mph.
