An extreme heat event developed on July 8 across Interior Central CA as a strong ridge of high pressure setup across the region. This weather pattern promoted progressively increasing temperatures for several days with excessive heat warning criteria met in some locations beginning the night of July 8, and continuing in most locations through July 11. Maximum temperatures on the 9th and 10th were generally between 105-112 degrees. Unusually humid conditions resulted in heat index values of 110 degrees or higher in many locations. Nighttime relief was very limited, especially in critics, where minimum heat index values failed to drop below 80 degrees. In addition, very poor air quality occurred coincident with the heat event due to wildfires across CA. The San Joaquin Valley Air Pollution Control District, in cooperation with NWS Hanford, issued several Air Quality Alerts, Health Advisories, and other air quality statements, in response to the poor air quality. NWS Hanford has a well-developed agreement to assist the Air District with air quality information dissemination.

07/10/08 20:00 PST

Temperature records have been broken at several locations. The low temperature at Bakersfield on July 10th was 86 degrees. This breaks the record highest minimum temperature at Bakersfield for the date of 82 degrees, set in 2002. The low temperature at Fresno on July 10th was 82 degrees. This breaks the record for the highest minimum temperature at Fresno for the date of 80 degrees, set in 1896. The low temperature at Bakersfield on July 9th was 84 degrees. This was 7 degrees warmer than the record high minimum temperature at Bakersfield for the date of 77 degrees, set in 1975. The low temperature at Fresno on July 9th was 81 degrees. This was 2 degrees warmer than the record high minimum temperature at Fresno for the date of 79 degrees.

Two fatalities occurred during this extreme heat event. Both fatalities were in Kern County near Maricopa. The victims were both farm workers working during the heat event. The first fatality occurred of a 42 year old male vineyard worker in Kern County. He was found in his truck along a highway and vineyard. The second fatality was a man of unknown age, also working in the vineyard near Maricopa.

The combination of very hot weather of very poor air quality created a situation very dangerous for those individuals sensitive to poor conditions, such as the elderly, young, and those with chronic health problems.

was reported in the newspaper the Bakersfield water supply was being threatened by dirt and silt washing down the Kern River. The California Water Service shut down a portion of their water treatment facility as of July 15. The city has only a 3 day supply of clean emergency water and that is beginning to run out at one of the treatment plants.

Strong thunderstorms over the El Paso Mountains during the afternoon of July 13th caused flash flooding on the Randsburg Road, with erosion of the road. Later storms over the Piute Mountains caused flooding of Erskine Creek with mud and debris flows again moving into the town of Lake Isabella.

Afternoon and evening thunderstorms continued through the 15th, with activity diminishing on the 16th. Flooding was observed in the Thompson Canyon, Erskine Creek, and Kelso Canyon areas.

Several swift water rescues were performed by the Kern County Fire Department near Lake Isabella. Photo courtesy of the Kern County Fire Department.

California Highway Patrol reported flooding on Highway 14 at Robbers Roost (north of Red Rock Canyon). Kern County Department of Highways reported a water, mud and debris flow on Highway 14. Water was up to a foot deep in spots, and several vehicles were stranded. NWS off-duty employee reported water on Inyokern Road was 12 inches deep in spots with several cars stranded. Garlock Road was covered in extensive debris. Flash flooding and mud and debris flow were reported at the junction of Garlock Road and Red Rock Randsburg Road.

An upper-level trough approached California on the 20th, bringing yet another surge of monsoonal moisture into the eastern Kern deserts. Outflow boundaries from nocturnal convection over Arizona and northern Mexico generated pre-dawn showers over the China Lake Naval Air Warfare Center and spread clouds across the mountains and the San Joaquin Valley. With the warm, unstable airmass over the region, showers and thunderstorms developed over the Tehachapi Mountains and drifted north into Kern County around sunrise. One storm strengthened into a thunderstorm near Delano, and brought the first measurable rain to Visalia and Fresno since May 27th. 0.01 inch of rain fell at Fresno-Yosemite International Airport, and the Visalia Municipal Airport recorded 0.03 inch of rain from the storm. Widespread mid-level clouds accompanied the monsoonal moisture, and these clouds, in conjunction with a push of low-level marine air through the Sacramento Delta, brought sharp cooling to much of the central and southern San Joaquin Valley on the 20th and 21st. The high temperature for Fresno on July 19th was 102. The next day, Fresno could only reach a high of 89 degrees, a difference of 13 degrees.

One large thunderstorm formed over Barstow during the afternoon of July 20th. As the storm collapsed, strong outflow winds pushed across the Kern County deserts, triggering thunderstorms that produced flash flooding that affected much of Ridgecrest, with fast flowing high water across several city streets. Water rescues were necessary for several people in Ridgecrest due to the flood waters.

Flash flooding and debris flow flooded out several automobiles. Photo Courtesy Kern County Fire Department.

Wildfire

The Telegraph wildfire was located in the CalFire Merced-Madera-Mariposa Unit, near Mariposa in Mariposa County. The ignition date was July 25 at 1410 PST. The cause was human, due to target shooting. The size was 34,091 acres. The wildfire was contained on August 5. There were no fatalities. There were 130 properties lost, of which 100 were outbuildings. Property damages were estimated at \$25M. The cost to containment was \$36.5M.
