10/01/21 00:00 PST 0 Drought

10/31/21 23:59 PST 0

Nearly all of the central California Interior remained classified as being in an exceptional drought by the end of October, 2021 due to a long term precipitation deficit. As of October 31, 2021, the impacted area has received less than 50% of normal precipitation since July 1, 2020.

FRESNO COUNTY --- 1.3 ESE MELVIN [36.81, -119.65]

10/08/21 05:00 PST 0 Heavy Rain

10/08/21 06:58 PST 0 Source: Trained Spotter

A trained spotted reported heavy rainfall for almost two hours in north Fresno and Clovis with ponding of water reported on several roadways.

A Pacific cold frontal system pushed through the area during the morning of October 8 spreading widespread precipitation across the area. Several stations in the eastern portion of the San Joaquin Valley and the Sierra Nevada range measured between a tenth and a four tenths of an inch of rainfall with portions of Fresno and Madera Counties picking up locally heavy showers which produced higher precipitation amounts. Several high elevation SNOTELs picked up an estimated one to three inches of new snowfall. The precipitation ended by late afternoon as the storm moved east of the area.

10/11/21 08:20 PST 0 High Wind (MAX 89 kt)

10/11/21 22:26 PST 0

A deep upper low pressure system dropped from the Pacific Northwest into the Great Basin during the morning of October 11. This resulted in a period of strong winds from the late morning hours until the evening as a very strong pressure gradient developed. Several stations reported wind gusts exceeding 58 mph with the strongest winds most noticeable on the Mojave Desert Slopes of the Tehachapi Mountains. A few low impact indicator sites reported gusts exceeding 80 mph. The winds diminished by the morning of October 12 as the low moved east of the Great Basin and pressure gradients relaxed.

10/17/21 20:00 PST 0 High Wind (MAX 72 kt)

10/18/21 10:27 PST 0

A strong cold front pushed through central California from the evening of October 17 through the early morning of October 18 as a low pressure system dropped southward through the Great Basin. While this system did bring some light precipitation to the Sierra Nevada with several stations measuring 1 to 3 tenths of an inch of liquid precipitation and 1 to 3 inches of new snowfall above 6000 feet, the main impact from this system was a period of gusty winds across the West Side Hills as well as across the Kern County Mountains. Several stations reported wind gusts exceeding 45 mph with a few low impact indicator sites measuring gusts exceeding 60 mph.

In the wake of the storm that brought moderate to heavy precipitation and strong wind gusts to the area on October 25, skies cleared out across the San Joaquin Valley during the early morning of October 26. With abundant low level moisture present over the area along with inversion conditions, an area of dense fog formed around sunrise over south central Fresno County, eastern Kings County and western Tulare County, prompting the issuance of the first Dense Fog Advisory of the season. The fog reduced visibility to an eighth of a mile in a few spots before dissipating by late morning.

| | 10/30/21 10:45 PST | | 0 | |

High pressure centered over the Great Basin resulted in a mainly clear day with above normal temperatures across the area on October 29. Clear skies, light winds and inversion conditions allowed for areas of dense fog to form in the San Joaquin Valley overnight reducing visibility to as low as an eighth of a mile. The fog remained persistent in a few spots until late morning. A low pressure system moving across the Pacific Northwest on October 30 provided for enough mixing and cloud cover the following night to inhibit fog formation.
