Despite the abundant rainfall and replenishing higher elevation snowpack received across the area in December, a long term precipitation deficit has resulted in continuing drought conditions across the central California Interior. Extreme drought conditions continued across most of the San Joaquin Valley and Kern County Deserts. Drought conditions did improve across the Sierra Nevada to moderate to severe conditions due to the abundant rainfall in December.

12/02/22 02:32 PST 0 High Wind (MAX 56 kt) 12/02/22 05:27 PST 0

A large low pressure system dropped southeast out of the northeast Pacific into central California during the afternoon of December 1 which resulted in widespread precipitation across the area between the morning of December 1 until the morning of December 2. Much of the Sierra Nevada picked up between 1.5 and 3 inches of beneficial liquid precipitation while elevations above 6000 feet generally picked up between 1 to 2 feet of new snowfall. Much of the San Joaquin Valley picked up between a quarter and a half inch of rainfall with slightly higher amounts being picked up in Merced County while Kern County had noticeably less precipitation with most stations picking up between a tenth and two tenths of an inch of rainfall. In addition to the precipitation, several stations reported wind gusts exceeding 60 mph while a few low impact indicator sites in Kern County measured gusts exceeding 60 mph.

(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z311) HANFORD - CORCORAN - LEMOORE

12/02/22 03:50 PST 0 Dense Foa

12/02/22 08:20 PST 0

Skies cleared out across portions of the San Joaquin Valley during the morning of December 2. This resulted in some localized dense fog across the area with visibility as low as eighth of a mile being briefly reported in Merced and in Hanford. Visibility rapidly improved by late morning as the fog dissipated.

California Highway Patrol reported rocks in the roadway at the intersection of Ben Hur Road and Silver Bar Road.

An upper level trough which moved through the region on December 3 and 4 brought another round of widespread precipitation to the area. This system picked up some warm tropical moisture which resulted in snow levels being rather high for much of the duration of this event. While significant snowfall did fall above 8000 feet, moderate to locally heavy rainfall below the snow line as much of the Sierra Nevada picked up between 2 and 4 inches of rainfall while the adjacent foothills picked up between 1.5 and 3 inches of rain and the San Joaquin Valley picked up between half an inch and an inch of rainfall. A rockslide was reported near Mariposa which resulted in some

Location Date/Time Deaths & **Event Type and Details** Property & Injuries Crop Dma brief road closures. Much like with the December 1 and 2 storm, amounts were much lower in Kern County where most stations only picked up a tenth of an inch or less of rainfall. (CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z310) DELANO - WASCO - SHAFTER, (CA-Z334) TEHACHAPI 12/07/22 02:15 PST Dense Foa 12/07/22 10:53 PST 0 A low pressure system moved eastward across central California during the afternoon and evening of December 6. As the low moved east of the area during the morning of December 7, skies cleared out and winds diminished across portions of the San Joaquin Valley and Tehachapi Mountains allowing for areas of dense fog to form as there was plenty of low level moisture around as a result of recent rainfall across the area. The fog lifted into a low cloud deck by late morning. (CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z311) HANFORD - CORCORAN - LEMOORE 0 12/08/22 02:50 PST Dense Fog 12/08/22 08:15 PST 0 A weak area of high pressure which built in over central California during the day on December 7 kept skies mainly clear and winds light overnight into the morning of December 8. This provided for favorable conditions for areas of dense fog to form towards daybreak in the San Joaquin Valley most noticeably in Merced County and near Hanford. The fog burned off by late morning. California Highway Patrol reported road	dway flooding near the intersection of Le	ee and Bradbury R	oads.	
A strong low pressure system slowly	moved across central California on De	ecember 10 and 1	1 providing the are	ea with moderate to
neavy precipitation. The precipitation	fell as snow above 5000 feet with seven	eral SNOTEL stati	ons picking up be	tween 18 and 30 inches of
estimated new snowfall. The snow lev	vel lowered to near 3000 feet by the aft	ternoon of Decem	ber 11 with some s	stations in the Sierra
	p between 3 and 6 inches of new snow	-		
• • •	hile the adjacent foothills picked up be			
oaquin Valley and Tehachapi Mounta	ains received between half an inch and	d an inch of rainfa	II. The precipitatio	n did change over the snow
n the Tehachapi Mountains above 40	00 feet, but snowfall amounts were ge	nerally light. Rain	shadowing effects	s limited precipitation
		the of our imple and	a augustar inch of r	sinfall. The presinitation
across the Kern County Deserts with	most stations receiving between a ten	ith of an inch and	a quarter ilicii oi i	aiman. The precipitation
across the Kern County Deserts with tapered off during the evening of Dec	most stations receiving between a ten ember 11 and ended by midday on De		a quarter inch or r	annan. The precipitation
tapered off during the evening of Dec	ember 11 and ended by midday on De	cember 12.

morning hours further south in Selma and Hanford. The fog completely dissipated by late morning.

(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z305) WEST SIDE OF FRESNO AND KINGS COUNTIES, (CA-Z310) DELANO - WASCO - SHAFTER,

Clear skies and light winds along with strong radiational cooling and a low level inversion made for favorable conditions for areas of dense fog to form by daybreak. Several webcams showed visibility below 1000 feet in Madera and Merced Counties where several school districts opened late for the first time this season due to dense fog. Patches of dense fog were also prevalent during the

(CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY

12/15/22 23:40 PST 0

12/16/22 11:40 PST 0

Clear cleared out and light winds prevailed for the second consecutive night across the San Joaquin Valley. As a result, areas of dense fog formed overnight and persisted in some locations until late morning when it dissipated. Several webcams across the valley showed visibility below 1000 feet and several school districts had delayed openings or delayed or cancelled bus service due to fog.

(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z305) WEST SIDE OF FRESNO AND KINGS COUNTIES, (CA-Z306) CARUTHERS - SAN JOAQUIN - SELMA, (CA-Z307) FRESNO - CLOVIS, (CA-Z310) DELANO - WASCO - SHAFTER, (CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY, (CA-Z314) BAKERSFIELD

12/16/22 20:45 PST 0 Dense Fog

12/18/22 13:40 PST 0

Clear skies and light winds prevailed across central California during the evening of December 16 which allowed for widespread dense fog to develop across the San Joaquin Valley during the morning of December 17. The fog lifted into a low cloud deck across most of the valley by late afternoon, but persisted in some locations until the morning of December 18. A stratus deck persisted across most of the valley until the afternoon of December 19 when mixing provided by a storm to the north of our area helped dissipate the low cloud deck.

(CA-Z306) CARUTHERS - SAN JOAQUIN - SELMA, (CA-Z307) FRESNO - CLOVIS, (CA-Z310) DELANO - WASCO - SHAFTER, (CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY

12/20/22 05:15 PST 0 Dense Fog

12/20/22 11:30 PST 0

Skies cleared out across the central portion of the San Joaquin Valley following the passage of an upper level low pressure system which had moved through northern California. The clearing skies and light winds made conditions favorable for denes fog to form over the central portion of the San Joaquin Valley. The fog lifted into a low cloud deck by late morning.

California Highway Patrol reported a large mudslide blocking the westbound lanes on SR 140 in Midpines.

A large upper trough moved slowly through California on December 30 and 31. This system had a deep fetch of tropical moisture associated with it which resulted in a period of moderate to heavy precipitation along with widespread flooding across much of the area on December 31. Numerous reports of flooding and debris flows were reported by law enforcement with several roads being briefly closed as a result of flooding. The system also produced strong wind gusts across the area between the afternoon of December 30 and the morning of January 1 with several stations in the West Side Hills and Tehachapi Mountains reporting gusts exceeding 60 mph.

Several stations in the Sierra Nevada below 7500 feet picked up between 4 and 7 inches of rainfall while the adjacent foothills picked up 2 to 4 inches of rainfall. Rain shadowing effects limited precipitation in the San Joaquin Valley to between half an inch and an inch of rain at most locations while many stations in the Tehachapi Mountains also picked up between half an inch and an inch of rain. Several higher elevations SNOTEL stations picked up 18 to 30 inches of new snowfall adding to the heavy snowpack which had already accumulated earlier in December.
