11/01/22 00:00 PST 0 Drought

11/30/22 23:59 PST 0

Although a significant winter storm impacted central California between November 7 and November 9, the interior remained abnormally dry in November 2022 as most of the area had slightly below normal precipitation totals for the month. By the end of the month, nearly all of our area remained in an extreme or exceptional drought as most of our area has received less than a third of normal precipitation since July 1, 2020.

11/01/22 07:00 PST 0 Winter Weather

11/02/22 07:00 PST 0

A cold upper low pressure system dropping through the Great Basin region pushed a cold front through central California on November 1 producing widespread precipitation across the area and resulting in this being the first significant winter storm of the season. Much of the Sierra Nevada picked up between a quarter and a half inch of liquid precipitation with several stations above 6000 feet picking up an estimated 3 to 5 inches of new snowfall between the morning of November 1 and the morning of November 2 with a few stations picking up 6 inches of snow. Much of the San Joaquin Valley north of Fresno County picked up between a quarter and a half inch of rainfall, but amounts were much lower further southward with most stations only picking up a few hundredths of an inch.

11/02/22 13:32 PST 0 High Wind (MAX 64 kt)

11/03/22 06:50 PST 0

A strong pressure gradient developed behind an upper low pressure system as it was moving slowly eastward out of the Great Basin and produced a period a gusty wind across the mountains of Kern County between the afternoon of November 2 and the morning of November 3. Several stations measured gusts between 45 and 55 mph while a few low impact indicator sites had gusts of 60 mph or higher.

precipitation to the area the previous three days moved east of the area. This allowed for skies to clear out and winds to diminish resulting in areas of dense fog forming in the San Joaquin Valley toward daybreak. The fog was most noticeable in Madera where traffic along SR 99 was impacted.

11/12/22 06:00 PST 0 Dense Fog

11/12/22 10:00 PST 0

High clouds moving over the area during the morning of November 11 inhibited dense fog from forming in the San Joaquin Valley, but the clouds moved out of the area overnight and skies had cleared out by the morning of November 12. With light winds and inversion condition present, a narrow strip of dense fog formed by daybreak along SR 99 between Tulare and Selma where visibility was reduced to a few hundred feet and traffic was impacted along SR 99 for a few hours until the fog burned off.

11/20/22 02:00 PST 0 Frost/Freeze

11/20/22 08:00 PST 0

A cold and dry airmass settled over the San Joaquin Valley on November 19. With clear skies and light winds prevalent, strong radiational cooling allowed for temperatures to drop below the freezing mark for three hours or more across portions of the San Joaquin Valley.

This was the first freeze of the season for much of the central portion of the San Joaquin Valley.
