

The National Weather Service Online

Brought to you by the National Weather Service in Wichita, KS

www.weather.gov/wichita

All of your favorite Weather Information Online!

You can find all of your favorite National Weather Service products on our webpage. The latest current conditions, forecasts, satellite imagery, radar loops, and all hazardous weather information is just a click away. In addition to the current and forecasted products, there is also a wealth of information available on the bar on left of page (see image below). This information includes current hazards, current observations, radar imagery, forecast, river forecasts, climate data (historical data as well) and weather safety information. Also see the current and archived weather stories detailing a past event on our webpage (top news of the day).

The NWS Wichita homepage (below, www.weather.gov/wichita), features a map of the forecast area as well as the latest conditions at the Wichita Mid-Continent Airport. If any hazardous weather is forecasted and advisories, watches or warnings are issued a color code will be used to specify which counties are being effected. Use your mouse to point and click on a county or city, and you will receive a 7-day forecast (right) as well as the current conditions at the nearest reporting site. If there is any hazardous weather, short term forecasts, or severe watches or warnings the text product will be highlighted in red (see hazardous weather outlook on right).
