1. INTRODUCTION

The United States National Oceanic and Atmospheric Administration (NOAA) National Weather Service (NWS) disseminates weather, water, climate, and oceanographic products (hereafter referred to as weather products) in a variety of formats: graphical, plain language text, and textual and binary data formats intended for machine-to-machine use. This document describes formatting for binary products that are disseminated over the Global Telecommunication System (GTS) Internet File Service (GIFS) and the GeoNetCast-Americas (GNC-A) broadcast, and includes a list of the binary products disseminated over these systems as well as sources of a few software applications and computer workstations that can be used to view these products.

2. ABBREVIATIONS AND ACRONYMS

3. BINARY PRODUCTS

The NWS disseminates some weather products with information encoded in binary data formats. The GIFS and the GNC-A systems include several encoding formats used in dissemination of binary data.

3.1. FORMATS

Binary file formats are often used for efficient storage, transfer and processing of data in computer systems and digital electronic devices. For more, see "Why Binary Files are Needed" at https://chortle.ccsu.edu/java5/notes/chap86/ch86_6.html.

A description of the binary formats used in dissemination of GIFS and GNC-A weather products is shown below:

- **BUFR**

The Binary Universal Form for the Representation of meteorological data (BUFR) is a binary data format maintained by the World Meteorological Organization (WMO). BUFR is portable, compact, and universal. BUFR belongs to the category of table-driven code forms. BUFR can store a large amount of data and metadata in a small amount of space by using look-up tables and bit-by-bit packing.

Notes: Details on BUFR format [BUFR User's Guide](#)

- **DIFAX**

A digital fax is a type of fax document that is sent and sometimes received electronically rather than a paper document. The benefit of a digital fax is that the electronic document can be stored in a file on a computer hard drive for viewing later and printed when the recipient requires a hard copy. Considered a greener alternative to traditional faxing, it is possible to send a digital fax using hardware and software developed for the purpose.

NWS digital fax data files are now stored in TIFF with Group 4 compression. Our observations indicate a 30% to 60% decrease in file size with this compression scheme over the previous (G3-1D) scheme.

- **GRIB**

GRIB (**GR**Idded **B**inary or **General R**egularly-distributed **I**nformation in **B**inary form) is a concise data format commonly used in meteorology to store historical and forecast weather data. It is standardized by the World Meteorological Organization's Commission for Basic Systems, known under number GRIB FM 92-IX, described in the *WMO Manual on Codes No. 306*.

- Currently there are two editions of GRIB in use.
 - The first edition is known as GRIB, GRIB1 or GRIB-Extended and is used worldwide by most meteorological centers for Numerical Weather Prediction output (NWP).
 - The second edition is known as GRIB2 with meteorological centers slowly changing over to this format. Some of the second-generation GRIB are for derived product distributed in Eumetcast of Meteosat Second Generation. Another example is the NAM (North American Mesoscale) model.¹

3.2. BINARY PRODUCT FOLDERS

The GIFS and the GNC-A systems store data folders for GIFS and transmit over channels for GNC-A. Each service has a set of folders or channels where binary products are stored or transmitted.

- GIFS is an Internet pull service with a set of folders in which products are stored.
- GNC-A disseminates products over a satellite network, with a set of channels for weather product types.

3.2.1. GIFS BINARY PRODUCT FOLDERS

GIFS Folder locations (<https://ra4-gifs.weather.gov/data/RMTN/>)

BUFR	https://ra4-gifs.weather.gov/data/RMTN/BUFR/
GRIB Extended	https://ra4-gifs.weather.gov/data/RMTN/GRIB_Extended/
GRIB2	https://ra4-gifs.weather.gov/data/RMTN/GRIB2/
PIC	https://ra4-gifs.weather.gov/data/RMTN/PIC/
RADAR	https://ra4-gifs.weather.gov/data/RMTN/RADAR/

¹ <https://en.wikipedia.org/wiki/GRIB>

- The BUFR folder holds weather products that are in the BUFR format.
- The GRIB_Extended folder holds weather products that are in the GRIB1 (sub version 2) format
- The GRIB2 folder holds weather products that are in the GRIB2 format.
- The PIC folder holds weather products in a DIFAX and PNG format.
(Note: PIC is an abbreviation for picture.)
- The RADAR folder holds RADAR weather products in BUFR format.

3.2.2. GNC-A BINARY PRODUCT CHANNELS

GNC-A data is disseminated on thirteen (13) channels. The following table lists the five (5) channels on the GNC-A broadcast where binary products are located.

ISCS-BUFR	83
ISCS-GRIB1	85
ISCS-GRIB2	86
ISCS-PIC	87
ISCS-RADAR	88

- The ISCS-BUFR channel holds weather products that are in the BUFR format.
- The ISCS-GRIB1 channel holds weather products that are in the GRIB Extended format
- The ISCS-GRIB2 channel holds weather products that are in the GRB2 format.
- The ISCS-PIC channel holds weather products in a DIFAX and PNG format.
- The ISCS-RADAR channel holds radar weather products in BUFR format.

3.3. VIEWING BINARY PRODUCTS

Weather products encoded in a binary format require special software to view the data. Each of the product encoding methods requires unique software to decode and extract the product into a viewable format. Some of these methods will require expertise in software installation and configuration in order to decode the desired products. No single software application will enable a user to view all types of binary encoded weather products.

Free software options for decoding binary products are available to the public, but most require a license to download and use. Appendix A of this document contains a list of some readily available software applications, which may require purchase or a license. The links provided are suggestions and not recommendations for decoding binary products. The user may need a deep understanding of weather products in order to use the information and data generated by the applications.

The best option for viewing binary encoded weather products is to use a computer workstation enabling a user to more easily view all of the various binary encoded weather products. A few workstation options are listed in Appendix A. This list is not all encompassing and the National Weather Service does not recommend any workstation vendor, but is merely providing a few examples.

3.3.1. National Centers for Environmental Prediction DECODING

The National Centers for Environment Prediction (NCEP) have developed software for decoding binary weather products. The available software is free but is limited to decoding only few encoding types. Expertise in the development of software may be necessary to compile the software for use in decoding weather products.

NCEP has several webpages that describe how to decode weather products and provides software for download. A list of links for more information and software is below:

- [NCEP Decoder Web Site \(noaa.gov\)](http://noaa.gov)
- [NCEP Decoder Interface Format \(noaa.gov\)](http://noaa.gov)
- [NCEP Decoder Download \(noaa.gov\)](http://noaa.gov)

4. BINARY PRODUCT MESSAGE HEADERS AND WRAPPER ENCODING

For users who might want to develop software to decode binary products, an understanding of the WMO headers and the binary encoding will be necessary. The *WMO Manual on the Global Telecommunication System, Annex III to the WMO Technical Regulations* explains in detail the message header and encoding wrapper used to identify a DIFAX (facsimile) weather product, such as can be found in the PIC folder for GIFS and the ISCS-PIC channel. The detailed example of the formatting is on page 112 in the URL:

https://library.wmo.int/doc_num.php?explnum_id=10469

The other binary product types (GRIB, GRIB2, and BUFR) follow the same formatting scheme of header, data, and end of message indicators. Using a hex editor to view binary products shows the same formatting as described for the DIFAX product. Descriptions for BUFR, GRIB and GRIB2 are below.

- BUFR description
https://www.eumetnet.eu/wp-content/uploads/2017/04/OPERA_buf_r_sw_desc.pdf

- GRIB Description
<https://repository.library.noaa.gov/view/noaa/11444>
- GRIB2 Description
https://graphical.weather.gov/docs/grib_design.html

Appendix B provides a product association table, using a part of the header information to categorize binary products for users who are looking for specific products on GIFS. A complete inventory of binary products on the two services (GNC-A and GIFS), available as of the date of this document's publication, is listed in Appendix C.

5. CONCLUSION

The National Weather Service disseminates complex meteorological and oceanographic data in an efficient exchange and storage method, specifically, binary encoding. Some products disseminated on GNC-A and GIFS are binary encoded.

Viewing these binary encoded files requires the use of applications or workstations to decode and present the data into a viewable format. Simply, a user will not be able download a file from GIFS and view that product in a browser. No single application is known to enable a user to view all of the various encoding methods for weather products. Also, a user must be familiar with the desired weather product(s) and have the appropriate software application(s) installed and configured to view the weather product(s).

A workstation from third party vendor enables users to view binary encoded weather products, and is the best method for viewing all of the available weather products disseminated over GNC-A and GIFS. The adventurous user may decide to review WMO and NWS documentation to understand more fully header and encoding methods used by the NWS in the dissemination of complex meteorological and oceanographic data and then develop their own decoder.

Appendix A: WORKSTATION AND APPLICATION LINKS

DISCLAIMER: NWS does not endorse the services or providers listed. Information presented is believed to be correct at the time of publication. Any fee or payment required for service is the responsibility of the consumer. The NWS recommends using multiple sources of information to validate the information that is received.
