## Heating Up by the Middle of Next Week! Heat Index Rising to 105-108°

# Tropical Weather **OUTLOOK**

## Monitoring A Potential Disturbance

Formation Chance: **60%**

An area of low pressure is expected to develop along a stalled front. There is a medium (60%) chance of this low becoming a weak tropical or subtropical system this weekend off the local coast. It is expected to remain in place after forming and then drift northward Sunday or Monday

### Hazards:

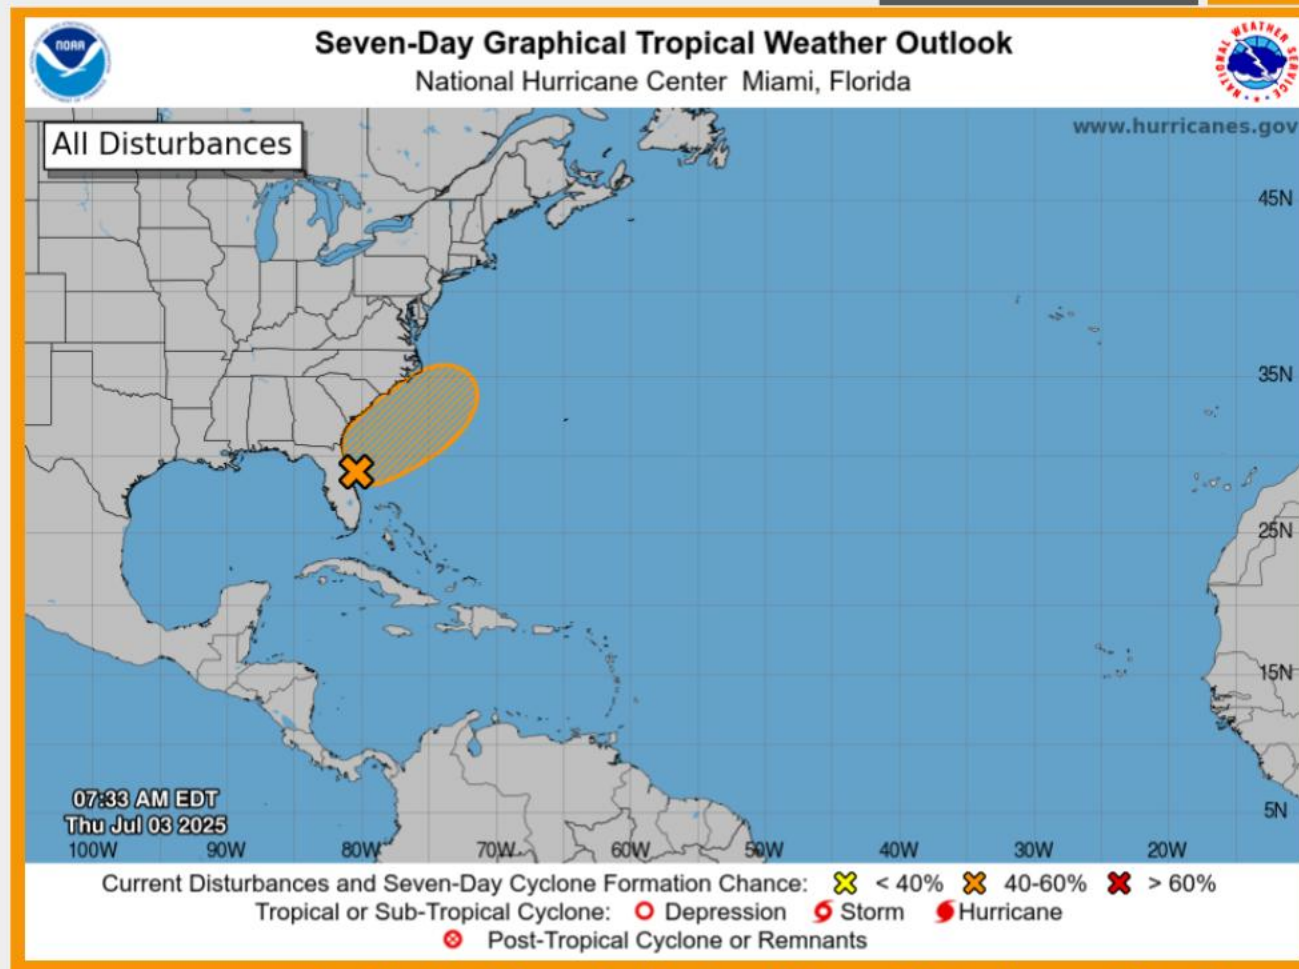

- Localized flash flooding risk, especially for North-Central FL
- Hazardous Boating Conditions
- Elevated Surf & Rip Current Risk
