

# POST TROPICAL CYCLONE REPORT

<b>Storm Name</b>	Tropical Storm Hilary
<b>NWS Office</b>	WFO Los Angeles / Oxnard
<b>Begin/End Date</b>	08/20/23 - 08/21/2023
<b>Fatalities</b>	0 - Direct 0 - Indirect
<b>Tornadoes</b>	0

## Event Summary

Tropical Storm Hilary affected southern CA with the main impacts across the WFO LOX CWA occurring from Sunday through Sunday night August 20, 2023. Tropical Storm Hilary produced wind gusts in the 40-50 mph range with the highest gusts of 60-70 mph over the San Gabriel Mountains. Peak gust was 87 mph at the Magic Mountain Truck Trail (SCE) site. Other peak gusts include 66 mph at Camp 9 RAWS and 55 mph at Browns Canyon (SCE). High-intensity rainfall occurred over many areas during the storm (0.50-1.00 inch/hour). The highest intensity observed was 1.20 inches/hour at Leo Carrillo on the coast in far southwestern Los Angeles County in Deal Flats in Ventura County across the western Santa Monica Mountains. Rainfall in August across southwestern CA is typically less than 0.05 inch, as was the case this month. The rain from Tropical Storm Hilary was the first measurable rain for the month for many areas. Record daily and monthly rainfall occurred at many sites in Ventura and Los Angeles Counties as a result of Hilary. New August monthly rainfall records include 2.99 inches at Downtown Los Angeles, 2.55 inches at Los Angeles International Airport, 2.63 inches at Long Beach, 3.56 inches at Burbank, 3.94 inches at Palmdale, 4.65 inches at Woodland Hills (Pierce College), 4.74 inches at UCLA, and 1.77 inches at Oxnard NWS. Note: Downtown Los Angeles has records dating back to 1877, the longest period of record in this area.

*NOTE: It is unlikely that the point-based observations provided in this report sampled the peak values for the event.*
