

CIPS

Analog-Based Severe Probability Guidance

Alex Elmore
Dr. Charles Graves

How We Use Analogs

Old CIPS Analog System

- **Analogs:** Past weather patterns
- **STEP 1:** Find analogs that match the forecast
- **STEP 2:** Frequency of hazard or threshold showing up at a grid point in analogs

Severe Report Frequency

Percentage [%] of Top 15 Analogs Exceeding 1 Severe Weather Report Within 110 km of Grid Point
Using GFS215 20190321/0000F096 and Valid at 20190325/0000 on the SP Domain

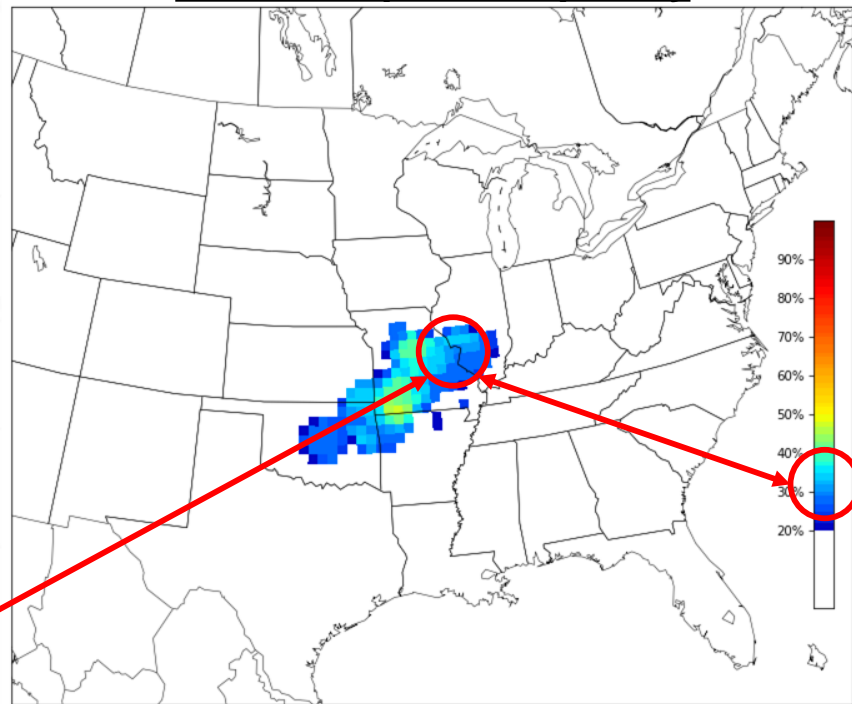

How We Use Analogs

Old CIPS Analog System

- **Analogs:** Historical Weather Patterns
- **STEP 1:** Find analogs that match the forecast
- **STEP 2:** Frequency of hazard or threshold showing up at a grid point in analogs

Approximate frequency around St. Louis= \sim 30%. This translates to \sim 5 out of 15 analogs having severe here.

Severe Report Frequency

Percentage [%] of Top 15 Analogs Exceeding 1 Severe Weather Report Within 110 km of Grid Point
Using GFS215 20190321/0000F096 and Valid at 20190325/0000 on the SP Domain

Not Your Father's CIPS

New CIPS Analog System

- Still uses top matching analogs
- Still uses severe reports
- Machine Learning-based probabilities

...Why are we doing this?

NOAA's National Weather Service

2019-2022 STRATEGIC PLAN

in brief

VISION

A Weather-Ready Nation: Society is prepared for and responds to weather, water, and climate-dependent events.

MISSION

Provide weather, water, and climate data, forecasts, and warnings for the protection of life and property and the enhancement of the national economy.

NOAA's National Weather Service

2019-2022 STRATEGIC PLAN

“Integrating the power of human skill with the efficiency of new computing technology will revolutionize *hazard forecasting, enabled by machine learning and advanced probabilistic tools.*”

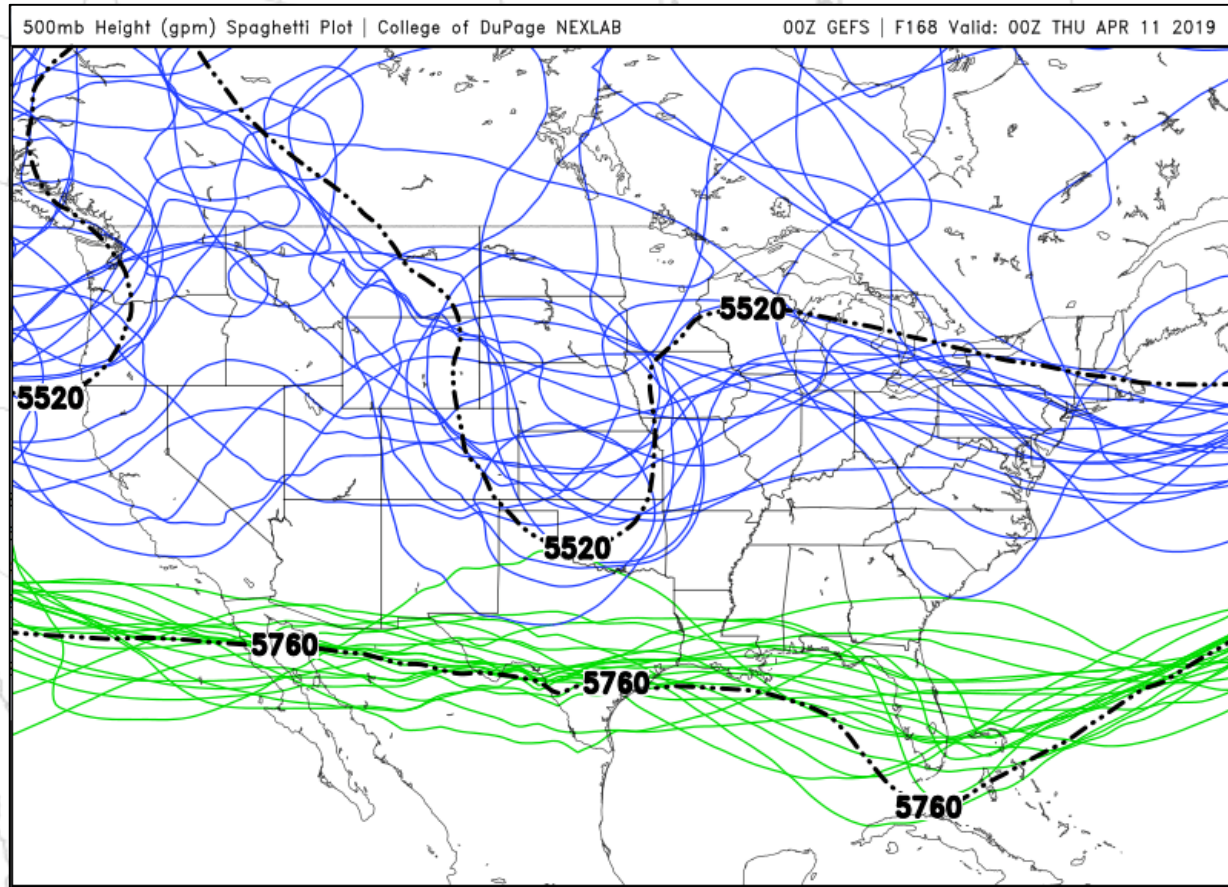

VISION

A Weather-Ready Nation: Society is prepared for and responds to weather, water, and climate-dependent events.

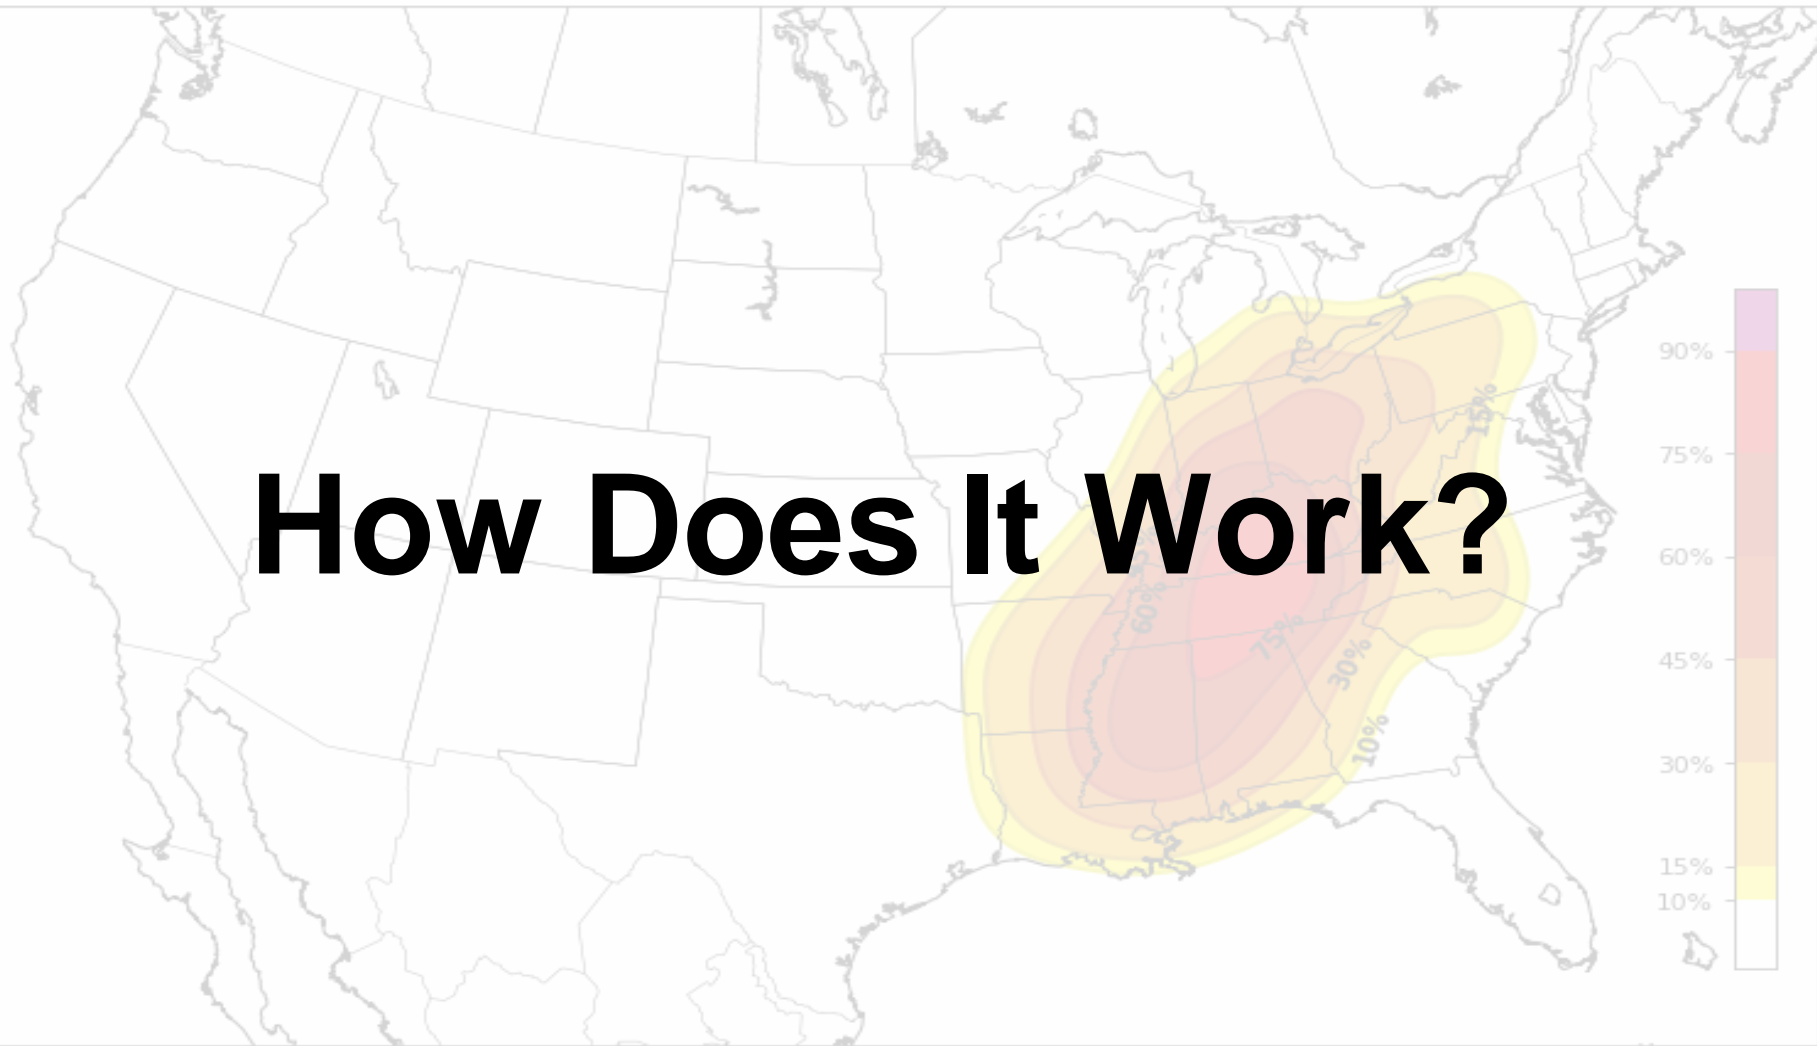

MISSION

Provide weather, water, and climate data, forecasts, and warnings for the protection of life and property and the enhancement of the national economy.

GEFS 500mb Heights Valid 168 Hours Out (Day 7)

How Does It Work?

STEP 1: Analogs are found based on the 24-192 hour forecasts of 0000 UTC GEFS Mean

0000 UTC GEFS	F024	F048	F072	F096	F120	F144	F168	F192
	Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Day 8

<u>Fields Used</u>				
Mass Fields	300mb Heights	500mb Heights	850mb Heights	MSLP
Thermal Fields	500mb Temps	700mb Temps	850mb Temps	2m Temps
Moisture Fields	700mb Specific Humidity	850mb Specific Humidity	2m Specific Humidity	PWAT

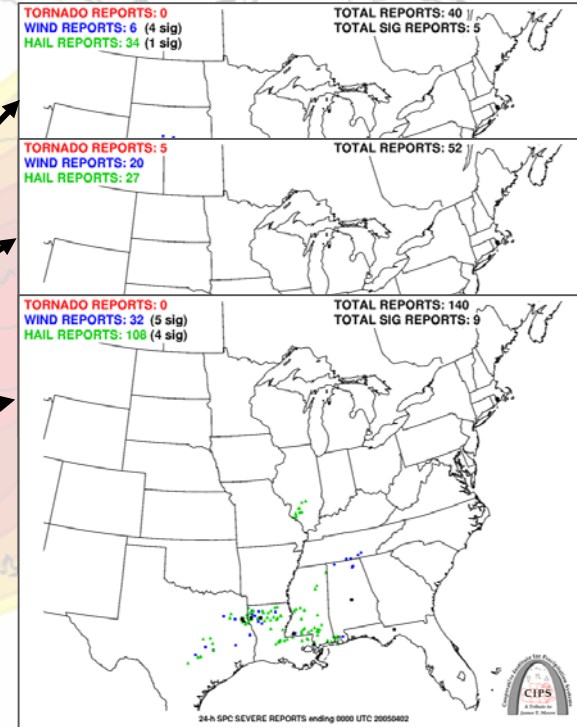

STEP 1: Analogs are found based on the 24-192 hour forecasts of 0000 UTC GEFS Mean

0000 UTC GEFS	F024	F048	F072	F096	F120	F144	F168	F192
	Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Day 8

<u>Fields Used</u>				
Mass Fields	300mb Heights	500mb Heights	850mb Heights	MSLP
Thermal Fields	500mb Temps	700mb Temps	850mb Temps	2m Temps
Moisture Fields	700mb Specific Humidity	850mb Specific Humidity	2m Specific Humidity	PWAT

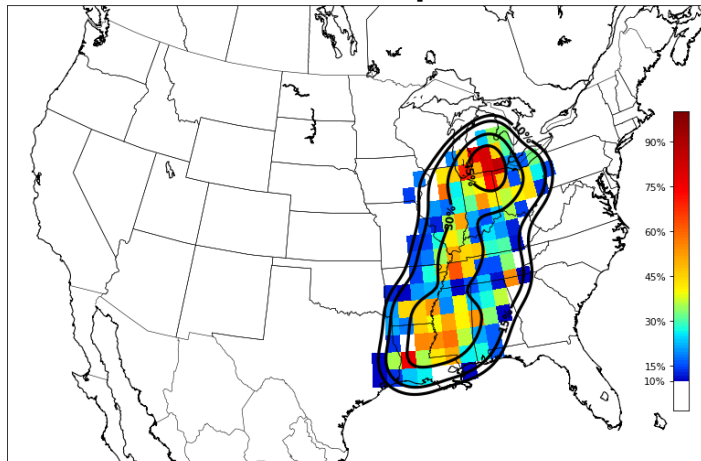

STEP 2: Machine Learning algorithm examines the relationship between analogs and severe reports

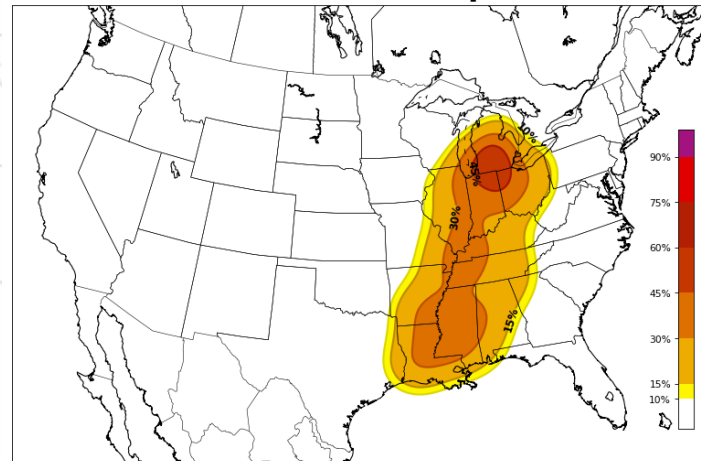

STEP 3: Machine Learning algorithm applies historical relationship to forecast. Output is probability of severe within 110km of a grid point.

Summary

Purpose:

- Provide probabilistic guidance for severe weather

Strengths:

- Identifies severe potential of large-scale pattern
- Provides forecast certainty/uncertainty

Limitations:

- Based on single model/ensemble
- Early- or late-period events
- Mesoscale events
