		<b>1400CST</b>							

An area of low pressure rapidly deepened over western Kansas in response to a strong upper level disturbance moving into the Plains. The pressure gradient strengthened over the Southern Plains with the western extent of the high surface winds occurring over the extreme southeastern Panhandle and northern Rolling Plains. Sustained wind of 40 to 45 mph was measured at KCDS for several hours with gusts reaching 56 mph. A few power lines and small tree limbs were blown down by the strong wind
