

Storm Data and Unusual Weather Phenomena - December 2017

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

TEXAS, South Panhandle

(TX-Z025) HALL, (TX-Z026) CHILDRESS, (TX-Z031) MOTLEY, (TX-Z032) COTTLE, (TX-Z038) KING

	12/22/17 16:00 CST	0	Winter Weather
	12/22/17 22:00 CST	0	

A compact upper level storm system moved across the South Plains and Rolling Plains during the afternoon into the evening of the 22nd. Although moisture was lacking with this system, several inches of snow fell at the surface near the center of the upper level closed circulation. Snowfall amounts ranged from 1.0 inches to 2.5 inches for the extreme southeastern Texas Panhandle and portions of the Rolling Plains. Elsewhere across the region, light snow generally melted as it hit the surface.

Snowfall totals from National Weather Service Cooperative weather observers are as follows:

2.5 inches at Childress 14NW (Hall County) and Childress 7NW (Childress County), 2.0 inches at Matador (Motley County) and Roaring Springs (Motley County), 1.8 inches at Childress (Childress County), 1.0 inch at Turkey (Hall County), Paducah (Cottle County), 10S Paducah (Cottle County), Dumont (King County), and Kirkland (Childress County).

(TX-Z025) HALL
