| A significant winter storm occurred across portions of the Mid-Atlantic on the 5th and 6th of December. The wintry weather was caused by a low pressure system that was located over the southeast states, which then moved off the North Carolina coast on the 6th. A swath of light to moderate snowfall occurred across portions of MD, Northern VA, and D.C. Storm total snowfall was between only a trace up to 4 inches in some spots.                                                                                                                                                                                                                                                                                                                                                                 |       |                 |                |               |              |         |                  |       |                    |

| A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of generally light accumulations of snow and ice across the noted winter weather area. Still, even these relatively light accumulations had a significant impact on commerce and travel across the region, especially since severe winter storm conditions occurred nearby. Generally, storm total snowfall ranged between 1 to 4 inches, while ice accumulations were two-tenths of an inch or less. 3 fatalities occurred (indirect) as a result of this storm system in traffic related accidents, all occurring in Maryland. |       |                 |                |               |              |         |                  |       |                    |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |       |                 |  |  |   |   |  |  |                |

| A significant winter storm occurred across portions of the Mid-Atlantic on the 5th and 6th of December. The wintry weather was caused by a low pressure system that was located over the southeast states, which then moved off the North Carolina coast on the 6th. A swath of light to moderate snowfall occurred across portions of MD and Northern VA. Storm total snowfall was between only a trace up to 4 inches in some spots.                                               |       |                 |  |  |   |   |  |  |                |

| A significant winter storm occurred across portions of the Mid-Atlantic on the 5th and 6th of December. The wintry weather was caused by a low pressure system that was located over the southeast states, which then moved off the North Carolina coast on the 6th. A swath of moderate to heavy snowfall occurred across portions of MD and Northern VA. Storm total snowfall was between 4 to 6.5 inches. There were also reports of trees down in a few locations in Northern Virginia due to heavy wet snow accumulations in Stafford and Spotsylvania Counties. |       |                 |                |               |              |         |                  |       |                    |

| A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of generally light accumulations of snow and ice across the noted winter weather area. Still, even these relatively light accumulations had a significant impact on commerce and travel across the region, especially since severe winter storm conditions occurred nearby. Generally, storm total snowfall ranged between 1 to 4 inches, while ice accumulations were two-tenths of an inch or less. 3 fatalities occurred (indirect) as a result of this storm system in traffic related accidents, all occurring in Maryland. |      |                 |                |               |              |         |                  |       |                    |

| A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of moderate to heavy snowfall across a large portion of the area, with some accumulations of ice as well in the Central Shenandoah Valley, where there were some power disruptions. Storm total snowfall ranged between 4 to 9 inches across the heavy snow area. 3 fatalities occurred (indirect) as a result of this storm system in traffic related accidents, all occurring in Maryland.                                                                                                                                     |      |                 |                |               |              |         |                  |       |                    |

| A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of generally light accumulations of snow and ice across the noted winter weather area. Still, even these relatively light accumulations had a significant impact on commerce and travel across the region, especially since severe winter storm conditions occurred nearby. Generally, storm total snowfall ranged between 1 to 4 inches, while ice accumulations were two-tenths of an inch or less. 3 fatalities occurred (indirect) as a result of this storm system in traffic related accidents, all occurring in Maryland. |      |                 |                |               |              |         |                  |       |                    |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 09   | 0300EST-0800EST |                |               | 0            | 0       |                  |       | Heavy Snow         |
| A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of moderate to heavy snowfall across a large portion of the area, with some accumulations of ice as well in the Central Shenandoah Valley, where there were some power disruptions. Storm total snowfall ranged between 4 to 9 inches across the heavy snow area. 3 fatalities occurred (indirect) as a result of this storm system in traffic related accidents, all occurring in Maryland.                                                                                                                                                                                                                                                                                                                                                                                                              |      |                 |                |               |              |         |                  |       |                    |

| A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of generally light accumulations of snow and ice across the noted winter weather area. Still, even these relatively light accumulations had a significant impact on commerce and travel across the region, especially since severe winter storm conditions occurred nearby. Generally, storm total snowfall ranged between 1 to 4 inches, while ice accumulations were two-tenths of an inch or less. 3 fatalities occurred (indirect) as a result of this storm system in traffic related accidents, all occurring in Maryland.                                                                                                                                                                                                                                                                          |      |                 |                |               |              |         |                  |       |                    |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 15   | 1800EST-2230EST |                |               | 0            | 0       |                  |       | Ice Storm          |
| A major winter storm occurred on December 15-16 across portions of the region. A low pressure storm tracked from the Gulf Coast to the Delmarva Peninsula by Friday morning, December 16. With warm air being drawn north into the cold air already in place, significant accumulations of freezing rain occurred across much of the area. Significant power outages occurred, especially in the Central Shenandoah Valley. Heavy snowfall also occurred across the higher elevations mainly along the Allegheny Front, with nearly a foot of storm total snowfall. Ice accumulations in the Shenandoah Valley were up to 1 inch. 5 fatalities occurred as a result of this major winter storm (indirect). All of these fatalities were traffic related. Dominion Power reported more than 40,000 customers without power in portions of the area.                                                                                                                                                                                                                                    |      |                 |                |               |              |         |                  |       |                    |
| <b>Montgomery County</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |      |                 |                |               |              |         |                  |       |                    |

With warm air being drawn north into the cold air already in place, significant accumulations of freezing rain occurred across much of the area. Significant power outages occurred, especially in the Central Shenandoah Valley. Heavy snowfall also occurred across the higher elevations mainly along the Allegheny Front, with nearly a foot of storm total snowfall. Ice accumulations in the Shenandoah Valley were up to 1 inch. 5 fatalities occurred as a result of this major winter storm (indirect). All of these fatalities were traffic related. Dominion Power reported more than 40,000 customers without power in portions of the area. Relatively light accumulations of snow and ice occurred across the western suburbs of Washington, D.C. and Baltimore, due to the intrusion of more warm air, which turned the precipitation over to all rain for a period of time. |      |                 |                |               |              |         |                  |       |                    |

| A major winter storm occurred on December 15-16 across portions of the region. A low pressure storm tracked from the Gulf Coast to the Delmarva Peninsula by Friday morning, December 16. With warm air being drawn north into the cold air already in place, significant accumulations of freezing rain occurred across much of the area. Significant power outages occurred, especially in the Central Shenandoah Valley. Heavy snowfall also occurred across the higher elevations mainly along the Allegheny Front, with nearly a foot of storm total snowfall. Ice accumulations in the Shenandoah Valley were up to 1 inch. 5 fatalities occurred as a result of this major winter storm (indirect). All of these fatalities were traffic related. Dominion Power reported more than 40,000 customers without power in portions of the area. |           |                     |                |               |              |         |                  |       |                    |

| County officials reported several trees down on roadways due to heavy wet snow accumulations.<br>A significant winter storm occurred across portions of the Mid-Atlantic on the 5th and 6th of December. The wintry weather was caused by a low pressure system that was located over the southeast states, which then moved off the North Carolina coast on the 6th. A swath of moderate to heavy snowfall occurred across portions of Southern MD and Northern VA. Storm total snowfall was between 4 to 6.5 inches. There were also reports of trees down in a few locations in Northern Virginia due to heavy wet snow accumulations in Stafford and Spotsylvania Counties. |           |                     |                |               |              |         |                  |       |                    |

| A significant winter storm occurred across portions of the Mid-Atlantic on the 5th and 6th of December. The wintry weather was caused by a low pressure system that was located over the southeast states, which then moved off the North Carolina coast on the 6th. A swath of moderate to heavy snowfall occurred across portions of Southern MD and Northern VA. Storm total snowfall was between only a trace to up to 4 inches in some spots.                                                                                                                                                                                                                              |           |                     |                |               |              |         |                  |       |                    |

| A significant winter storm occurred across portions of the Mid-Atlantic on the 5th and 6th of December. The wintry weather was caused by a low pressure system that was located over the southeast states, which then moved off the North Carolina coast on the 6th. A swath of moderate to heavy snowfall occurred across portions of Southern MD and Northern VA. Storm total snowfall was between 4 to 6.5 inches. There were also reports of trees down in a few locations in Northern Virginia due to heavy wet snow accumulations in Stafford and Spotsylvania Counties.                                                                                                                                                              |       |                 |                |               |              |         |                  |       |                    |

| A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of moderate to heavy snowfall across a portion of the area, with some accumulations of ice as well in the Central Shenandoah Valley, while there were some power disruptions. Storm total snowfall ranged between 4 to 9 inches across the heavy snow area. 3 fatalities occurred (indirect) as a result of this storm system in traffic related accidents, all occurring in Maryland.                                                                          |       |                 |                |               |              |         |                  |       |                    |

| A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of generally light accumulations of snow and ice across the noted winter weather area. Still, even these relatively light accumulations had a significant impact on commerce and travel across the region, especially since severe winter storm conditions occurred nearby. Generally, storm total snowfall ranged between 1 to 4 inches, while ice accumulations were two-tenths of an inch or less. 3 fatalities occurred (indirect) as a result of this storm system in traffic related accidents, all occurring in Maryland. |      |                 |                |               |              |         |                  |       |                    |

| A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of moderate to heavy snowfall across a portion of the area, with some accumulations of ice as well in the Central Shenandoah Valley, where there were some power disruptions. Storm total snowfall ranged between 4 to 9 inches across the heavy snow area, while ice storm accumulations ranged between two-tenths to half an inch of ice. 3 fatalities occurred (indirect) as a result of this storm in traffic related accidents, all occurring in Maryland.                                                                  |      |                 |                |               |              |         |                  |       |                    |

| A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of generally light accumulations of snow and ice across the noted winter weather area. Still, even these relatively light accumulations had a significant impact on commerce and travel across the region, especially since severe winter storm conditions occurred nearby. Generally, storm total snowfall ranged between 1 to 4 inches, while ice accumulations were two-tenths of an inch or less. 3 fatalities occurred (indirect) as a result of this storm system in traffic related accidents, all occurring in Maryland. |      |                 |                |               |              |         |                  |       |                    |

| A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of moderate to heavy snowfall across a portion of the area, with some accumulations of ice as well in the Central Shenandoah Valley, where there were some power disruptions. Storm total snowfall ranged between 4 to 9 inches across the heavy snow area, while ice storm accumulations ranged between two-tenths to half an inch of ice. 3 fatalities occurred (Indirect) as a result of this storm in traffic related accidents, all occurring in Maryland.                                                                 |      |                 |                |               |              |         |                  |       |                    |

| A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of generally light accumulations of snow and ice across the noted winter weather area. Still, even these relatively light accumulations had a significant impact on commerce and travel across the region, especially since severe winter storm conditions occurred nearby. Generally, snow total snowfall ranged between 1 to 4 inches, while ice accumulations were two-tenths of an inch or less. 3 fatalities occurred (indirect) as a result of this storm system in traffic related accidents, all occurring in Maryland. |      |                 |                |               |              |         |                  |       |                    |

| A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of moderate to heavy snowfall across a portion of the area, with some accumulations of ice as well in the Central Shenandoah Valley, where there were some power disruptions. Storm total snowfall ranged between 4 to 9 inches across the heavy snow area, while ice storm accumulations ranged between two-tenths to half an inch of ice. 3 fatalities occurred (indirect) as a result of this storm in traffic related accidents, all occurring in Maryland.                                                                                                                                                                                                                                                                                                                                                       |           |                     |                |               |              |         |                  |       |                    |

| A major winter storm occurred on December 15-16 across portions of the region. A low pressure storm tracked from the Gulf Coast to the Delmarva Peninsula by Friday morning, December 16. With warm air being drawn north into the cold air already in place, significant accumulations of freezing rain occurred across much of the area. Significant power outages occurred, especially in the Central Shenandoah Valley. Heavy snowfall also occurred across the higher elevations mainly along the Allegheny Front, with nearly a foot of storm total snowfall. Ice accumulations in the Shenandoah Valley were up to 1 inch. 5 fatalities occurred as a result of this major winter storm (indirect). All of these fatalities were traffic related. Dominion Virginia Power reported more than 40,000 customers without power in North-Central Virginia.                                                                                                                                                                                                                                     |           |                     |                |               |              |         |                  |       |                    |

| A major winter storm occurred on December 15-16 across portions of the region. A low pressure storm tracked from the Gulf Coast to the Delmarva Peninsula by Friday morning, December 16. With warm air being drawn north into the cold air already in place, significant accumulations of freezing rain occurred across much of the area. Significant power outages occurred, especially in the Central Shenandoah Valley. Heavy snowfall also occurred across the higher elevations mainly along the Allegheny Front, with nearly a foot of storm total snowfall. Ice accumulations in the Shenandoah Valley were up to 1 inch. 5 fatalities occurred as a result of this major winter storm (indirect). All of these fatalities were traffic related. Dominion Virginia Power reported more than 40,000 customers without power in North-Central Virginia. Relatively light accumulations of snow and ice occurred across the western suburbs of Washington, D.C., and Baltimore, due to the intrusion of more warm air, which turned the precipitation over to all rain for a period of time. |           |                     |                |               |              |         |                  |       |                    |

| <p>A major winter storm occurred on December 15-16 across portions of the region. A low pressure storm tracked from the Gulf Coast to the Delmarva Peninsula by Friday morning, December 16. With warm air being drawn north into the cold air already in place, significant accumulations of freezing rain occurred across much of the area. Significant power outages occurred, especially in the Central Shenandoah Valley. Heavy snowfall also occurred across the higher elevations mainly along the Allegheny Front, with nearly a foot of storm total snowfall. Ice accumulations in the Shenandoah Valley were up to 1 inch. 5 fatalities occurred as a result of this major winter storm (indirect). All of these fatalities were traffic related. Dominion Virginia Power reported more than 40,000 customers without power in North-Central Virginia.</p> |      |                     |                |               |              |         |                  |       |                    |

| Trained spotters reported between 6 to 10 inches of storm total snowfall, mainly in the higher elevations of the county. Moist northwest winds originating from the Great Lakes caused considerable snowfall on the 1st and 2nd. The higher snow totals occurred across the higher elevations of Western MD, Eastern WV, and Western VA.                                                                                                                                                                                                                                                                                                                            |       |                 |                |               |              |         |                  |       |                    |

| A significant winter storm occurred across portions of the Mid-Atlantic on the 5th and 6th of December. The wintry weather was caused by a low pressure system that was located over the southeast states, which then moved off the North Carolina coast on the 6th. A swath of light to moderate snowfall occurred across portions of Southern MD, Northern VA, and Eastern WV. Storm total snowfall was between only a trace to up to 4 inches in some spots.                                                                                                                                                                                                     |       |                 |                |               |              |         |                  |       |                    |

| A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of moderate to heavy snowfall across a portion of the area, with some accumulations of ice as well in the central Shenandoah Valley, where there were some power disruptions. Storm total snowfall ranged between 4 to 9 inches across the heavy snow area. 3 fatalities occurred (indirect) as a result of this storm system, in traffic related accidents, all occurring in Maryland. |       |                 |                |               |              |         |                  |       |                    |

| <p>A major winter storm impacted the Mid-Atlantic Region on the 8th and 9th. A coastal low pressure storm developed off the southeast coast, meanwhile a strong upper-level storm moved from the Ohio Valley to the Eastern Great Lakes. All this combined to generate a swath of generally light accumulations of snow and ice across the noted winter weather area. Still, even these relatively light accumulations had a significant impact on commerce and travel across the region, especially since severe winter storm conditions occurred nearby. Generally, storm total snowfall ranged between 1 to 4 inches, while ice accumulations were two-tenths of an inch or less. 3 fatalities occurred (indirect) as a result of this storm in traffic related accidents, all occurring in Maryland.</p> |      |                     |                |               |              |         |                  |       |                    |

| A major winter storm occurred on December 15-16 across portions of the region. A low pressure storm tracked from the Gulf Coast to the Delmarva Peninsula by Friday morning, December 16. With warm air being drawn north into the cold air already in place, significant accumulations of freezing rain occurred across much of the area. Significant power outages occurred, especially in the Central Shenandoah Valley. Heavy snowfall also occurred across the higher elevations mainly along the Allegheny Front, with nearly a foot of storm total snowfall. Ice accumulations in the Shenandoah Valley were up to 1 inch. 5 fatalities occurred as a result of this major winter storm (indirect). All of these fatalities were traffic related. Dominion Power reported more than 40,000 customers without power in portions of the area. |           |                     |                |               |              |         |                  |       |                    |
