## Storm Data and Unusual Weather Phenomena - August 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<p>At 6:27 AM EDT, a tornado rated EF-0 caused damage near Scotland, MD. The survey found tree damage along a portion of Point Lookout Road between St. Gabriels Manor Way and Fresh Pond Neck Road. First evidence of tornado touchdown was near the intersection of St. Gabriels Manor Way and Route 5/Point Lookout Rd where numerous tree limbs were down.</p> <p>As the tornado moved north-northwest, numerous trees were snapped or downed all along the 12800 block of Point Lookout Rd. An entire row of cedar trees was pushed over behind one residence. A resident who was home when the tornado passed over stated they heard a violent roaring sound, the house visibly shook, and then it was over in a matter of seconds. A row of trees behind the residence was uprooted during this time.</p> <p>The tornado lifted shortly before crossing Fresh Pond Neck Road at Point Lookout Rd and then touched down further north near the intersection of Curleys Rd and Point Lookout Rd knocking down a tree on Curleys Rd. The tornado finally knocked down a tree on a farm just northeast of the aforementioned intersection before lifting at 6:31 AM EDT.</p>				
<hr/>				
<b>ST. MARY'S COUNTY --- 0.3 NNE TALL TIMBERS [38.17, -76.53], 1.2 NNW CHINGVILLE [38.24, -76.56]</b>

	08/04/20 05:41 EST		0	Source: NWS Storm Survey
<p>At 6:32 AM EDT, a tornado rated EF-1 formed soon after the storm moved northwest of Piney Point, MD. Consistent tree damage began along Piney Point Road between Tall Timbers and Valley Lee. An aerial survey was conducted, and a path of snapped and uprooted trees about 75 to 100 yards wide was noted extending to the northwest through the woods and fields of rural St. Marys County. Some roads having multiple trees downed along this path included Blake Creek Road, Richey Road, and Medleys Neck Road. Homes were damaged by falling trees, including one along Medleys Neck Road near the intersection with Scarlet Tanager Way.</p> <p>The tornado crossed Route 5/Point Lookout Road near the intersection with Lightfoot Way. Here there was also significant tree damage. Large trees were uprooted damaging a shed and a home. A mobile home/camper was blown over on its side. The tornado then dissipated at 6:41 AM EDT.</p>				
<hr/>

## Storm Data and Unusual Weather Phenomena - August 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<p>One of four confirmed tornadoes spawned by Tropical Storm Isaias over lower southern Maryland touched down along Point Patience Drive between the Navy Recreation Center Solomons Fishing Pier and Third Cove. The tornado tracked northeastward roughly along Patuxent Drive, uprooting and snapping numerous trees along its path. The trees fell in a convergent manner over a path of nearly one mile long and about 175 yards wide, indicating a tornadic circulation was in contact with the ground. Two recreational vehicles on the Navy facility were smashed by falling trees. Fortunately there were no occupants at the time. Trees fell on numerous recreational facilities on the compound, and damage was noted to outdoor umbrellas at the pool which were rated for hurricane force winds. NWS 88D Doppler Radar, as well as the FAA Terminal Doppler Weather Radars TDCA and TADW all indicated strong rotation over this area.</p> <p>The tornadic damage ended near the north end of the Naval facility, and no damage was noted in the adjacent residential community to the north. Many other scattered trees were knocked down all across Calvert County and lower southern Maryland due to winds associated with Tropical Storm Isaias.</p>				
<hr/>

## Storm Data and Unusual Weather Phenomena - August 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

At 7:33 AM EDT, an EF-1 tornado came onshore at Plum Point near Beach Drive approximately 5 miles east of Huntingtown, MD. The tornado moved west along Shore Drive, uprooting numerous trees and snapping and twisting others. A large tree halfway along Shore Drive fell on a house, causing structural damage. The tornado proceeded to move to the end of Shore Drive and shifted southwest along Ridge Road causing trees to snap about 20 feet up and fall in multiple directions. Some trees that were snapped were a foot and a half in diameter.

The tornado then moved across Plum Point Creek and the grassy wetlands toward Tobacco Road. A swath of trees had their tops broken off east of Tobacco Road and fell mainly in a south to west direction.

The tornado then proceeded up Tobacco Road near Tobacco Lane, and moved northward towards Breezy Point Road. Peak winds in the tornado were estimated to have reached 90 mph here. Over 30 trees were uprooted, and some were broken in half. A house had a tree fall on it along the Tobacco Road area, and windows were blown in on another house. Tobacco Road had over 10 trees fall westward over the road along with multiple power poles. A 75 to 100 yard path of tree damage was observed east of Tobacco Road with trees falling in multiple directions. The area of Tobacco Road from Pinewood Terrace to Tobacco Lane became impassable due to the tree and power line damage, and the Breezy Point area became cut off from the main road.

The tornado moved west after passing Breezy Point Road and caused numerous trees to fall along Route 261/Bayside Road near Bristol Drive. A large tree near the intersection of Route 261 and Bristol Drive fell on a house. The tree damage path was observed up to 50 to 75 feet down the north end of Bristol Drive.

The tornado then crossed MD-261, downing more trees and tearing siding from homes near the intersection of Holbrook Lane and Pleasant Court. One tree fell into a house, knocking out a window. No further tornadic damage was observed beyond this point.

The river gage on Mattawoman Creek near Pomonkey, MD exceeded the 7 foot flood stage during the indicated period. Pomfret Rd. is flooded and closed. The peak level of 8.06 feet occurred at 11:00 PM on the 4th.				
<b>Tropical Storm Isaias moved up the east coast, passing through southern Maryland on the morning of Tuesday, August 4th, 2020, spawning several tornadoes as well as flooding rain and tropical storm force winds.</b>				
Storm total rainfall ranged from 2 to 4 inches near Interstate 95 to as much as 9 inches in Calvert County east of Interstate 95. The heavy rain led to numerous incidents of flooding and flash flooding, especially near and east of Interstate 95.				
The highest sustained wind of 46 knots was reported at Bishops Head and the highest peak gust of 63 knots was also reported at Bishops Head.				
There were three tornadoes associated with Isaias over southern Maryland and there were also numerous reports of downed trees from tropical storm force winds, especially near and east of Interstate 95.

## Storm Data and Unusual Weather Phenomena - August 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	08/08/20 05:21 EST		0	Flood (due to Heavy Rain)
	08/08/20 11:06 EST		0	Source: River/Stream Gage

The river gage on the Western Branch Patuxent River near Upper Marlboro, MD exceeded the 11 foot flood stage during the indicated period. The Water St. bridge in Upper Marlboro was completely covered by water. The peak level of 11.68 feet occurred at 8:00 AM on the 8th.

**A nearly stationary boundary remained overhead while an upper-level disturbance passed through the area. Showers and thunderstorms developed, and storms were slow to move which meant heavy amounts of rain fell in short periods of time, resulting in areas of flash flooding and flooding.**

## Storm Data and Unusual Weather Phenomena - August 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A supercell thunderstorm spawned two tornadoes during the afternoon of Thursday, August 6th. The first tornado touched down along Hatchery Road, near Harriston in Augusta County Virginia. Numerous trees were uprooted and large branches snapped along the tornado's path as it moved to the east-southeast. Trees fell in multiple directions in a generally convergent nature over a path about two and a half miles long. Notably, many trees fell towards the south while the parent storm's motion was toward the east, indicating a rotating vortex in contact with the ground. NWS 88D Doppler Radar showed rotation directly over this area.

There was tree damage noted along Rockfish Road and crop damage along Patterson Mill Road. The tornado then moved across US-340 East Side Highway where at least one tree fell on a vehicle, but no injuries were reported as a result. It then moved into the Jollett Springs Mobile Home Park, where several trees were uprooted, and one snapped. At least one mobile home had damage to its facade when an awning blew off, as shown by a picture taken by local broadcast media.

Sporadic straight-line tree damage was noted north and east of this point, and although KLWX WSR-88D continued to show rotation several thousand feet above ground level, no discernible tornadic damage was noted east of the mobile home park from this tornado.

**ALBEMARLE COUNTY --- 0.8 SW EARLYSVILLE [38.16, -78.49], 0.7 SW EARLYSVILLE [38.16, -78.49]**

08/06/20 15:50 EST	50K	Tornado (EF0, L: 0.16 mi , W: 75 yd)
08/06/20 15:51 EST	0	Source: NWS Storm Survey

The second of two tornadoes spawned by a supercell thunderstorm on the afternoon of August 6th occurred over Broadus Wood Elementary School on VA-663 Buck Mountain Road in Earlysville, Virginia. It was on the ground only briefly, uprooting several trees, and snapping two, in a convergent manner over a brief path on and adjacent to the elementary school grounds. While there was fencing damage on the school grounds, no damage was noted to the school building.

This tornado was embedded in a larger area of intense straight-line winds that produced numerous instances of downed trees across Free Union, Earlysville and Hollymead just northwest of Albemarle County Airport. NWS 88D Doppler Radar showed persistent rotation in this area, but the only evidence of tornadic damage on the ground was over this brief path.

## Storm Data and Unusual Weather Phenomena - August 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<b>LOUDOUN COUNTY --- 0.8 NE HAMILTON [39.14, -77.64]</b>				
	08/06/20 20:40 EST		10K	Thunderstorm Wind (EG 55 kt)
	08/06/20 20:40 EST		0	Source: Emergency Manager
Numerous trees were blown down between Leesburg and Purcellville.				
<p><b>A slow-moving warm front sparked multiple rounds of isolated severe thunderstorms across the Middle Atlantic on Thursday, August 6th, 2020. The first moved through the greater DC metro area during the early morning hours. The second was a supercell that moved across the southern Shenandoah River Valley and central Virginia Piedmont, causing significant damage and unusually large hail for so late in the season. A final (third) round of thunderstorms affected northern Virginia with isolated wind damage during the mid to late evening hours.</b></p>

There were reports of Rockslides due to heavy rainfall near Wintergreen.

Plenty of moisture from the Gulf of Mexico combined with a boundary to trigger showers and thunderstorms. A light flow aloft that was nearly unidirectional caused some showers and thunderstorms to train over the same areas, which led to instances of flooding and flash flooding.

## Storm Data and Unusual Weather Phenomena - August 2020

Old Office Rd. closed due to flooding at Mine Run between Burr Hill Rd. and Zoar Rd.

**An onshore flow on the cool side of a stationary boundary allowed for plenty of moisture from the Atlantic Ocean to move into central Virginia. Warm and moist air overran the cooler air off the Atlantic, resulting in numerous showers and even a couple thunderstorms. Rain was locally heavy at times due to the copious amounts of moisture in place, and this led to several instances of flooding across central Virginia.**

### WEST VIRGINIA, East

<b>MORGAN COUNTY --- 0.7 W GREAT CACAPON [39.62, -78.29]</b>	08/01/20 19:06 EST		3K	Thunderstorm Wind (EG 50 kt)
