There were no instances of river flooding in the MAF Hydrologic Service Area during the month of February.

The month of February saw a decent amount of rainfall at KMAF ending with 0.82 inches. This is 0.24 inches above the climate average for the month. On February 10, KMAF recorded a trace. Then on the 23rd and 24th, KMAF got a slow and steady rainfall over the two days with 0.29 and 0.47 recorded on each day respectively. Similarly, KODO received 0.82 inches and KCNM received 0.30 for the month. While this was beneficial, it was not quite enough to pull the area out of drought conditions. Moving south however, far less amounts were received for the month with locations such as KFST and KMRF receiving only 0.01 and 0.02 respectively and K6R6 down in Terrell County with no reported rainfall for the month.

Reservoir levels across the Hydrologic Services Area are averaging 57.71% of conservation capacity. Champion Creek is lowest at 14% and Lake Colorado City is highest at 89%. The flood threat continues to remain low.
