	05/11/20 21:10 CST		0	Source: ASOS

A thunderstorm moved across Midland County and produced a 58 mph wind gust at the Midland ASOS site.

An upper level disturbance moved over West Texas which provided lift. There was strong heating across the area along with a dryline. This resulted in instability, moisture, and lift along the dryline. There was also wind shear present. These conditions resulted in thunderstorms that produced severe winds, large hail, and flash flooding across portions of the Trans Pecos and Permian Basin.

An upper level disturbance moved over West Texas. There was a dryline present near the West Texas/eastern New Mexico border. Strong heating and instability as well as plentiful moisture were in place across West Texas. These conditions resulted in thunderstorms that produced large hail and a landspout tornado across portions of West Texas.

road at mile marker 158 on I-20. The	cost of damage is a very rough estimate. RADO CITY [32.39, -100.91] 05/15/20 17:05 CST		50K	Thunderstorm Wind (EG 65 kt)

A thunderstorm moved across Mitchell County and produced a measured wind gust of 61 mph three miles south of Colorado City.

An upper level trough moved over the region from the west. A dryline was across West Texas and southeast New Mexico with plentiful moisture east of the dryline. High instability was also in place across the area. These conditions resulted in thunderstorms developing that produced large hail, severe winds, and flash flooding.
