Event Summary

Hurricane Isaias made landfall in the Florida Panhandle on the evening on October 9 as a category 2 hurricane with maximum sustained winds near 105 mph and a central pressure of 971 mb. The storm weakened quickly as it moved north across the Gulf Coast Region. Across northeast Mississippi, locally heavy rain and gusty winds occurred with the remnants of Isaias. However, no significant impacts were noted.

NOTE: It is unlikely that the point-based observations provided in this report sampled the peak values for the event.
