### OVERVIEW

Tropical Cyclone Franklin is forecast to pass well east of Eastern NC over the next few days, but long period swell combined with high tides will lead to **an increased risk of coastal impacts into next week**

### TIMING

- **Dangerous Rip Currents** – Now through at least the middle of next week
- **Additional Coastal Hazards** – Highest likelihood Monday and Tuesday, but possibly extending into mid to late-week

### HAZARDS & IMPACTS

- **Dangerous Rip Currents**
- **Additional Coastal Hazards** – Beach erosion and ocean overwash impacts possible across portions of the Outer Banks

### ADDITIONAL INFORMATION

We **LOST** more lives in 2019 from Hurricane Lorenzo, a storm 2,00 miles away, than with Hurricane Dorian. **Take the rip current threat from distant storms SERIOUS!**

The tropics are becoming **VERY ACTIVE**, and this is a good reminder to finish general hurricane season preparations.

---

Rip currents are powerful currents of water moving away from shore. They can sweep even the strongest swimmer away from shore. If at all possible, swim near a lifeguard.
