A line of strong to severe storms tracked eastward across East Central Florida during the late afternoon and evening hours of January 25th 2011. Hazardous Weather Outlooks ahead of the event alerted the public to the possibility of severe weather with advanced lead time for this time period (Tuesday) with the mention of the possibility of long tracked tornadoes and damaging straight line winds in the early morning Hazardous Weather Outlook on Monday. Forecast models continued to indicate the likelihood for severe storms: a strong upper level diffuient jet pattern, strong low level wind fields and increasing Convective Available Potential Energy (CAPE) and instability were forecast over East Central Florida by Tuesday afternoon.

As well as highlighting the upcoming weather threat in Hazardous Weather Outlooks a special Public Information Statement was issued at 6 PM Monday evening highlighting Tornado safety rules and the importance of making sure you have a NOAA Weather Radio set to alert and in good working order.

A Tornado Watch was issued for all of East Central Florida at 210 PM.

A Special Weather Statement was issued at 345 PM which gave advance warning to Lake county that severe storms with destructive winds were forecast to move into Lake county by 5 pm. A Severe Thunderstorm Warning was issued for Lake county, western Orange, western Seminole and northwest Volusia counties at 432 PM through 530 PM.

Numerous Severe Thunderstorm and Tornado Warnings were issued throughout the remainder of the late afternoon and evening as the convective line raced east across the Orlando Metro area toward the Volusia county coast. Transient mesocyclones and rotation were observed with several cells as they moved east to northeast ahead of and along the line. By evening, the main convective line had moved into central areas from Osceola and Brevard counties with discrete convective showers and thunderstorms developing ahead of
the line some with rotation. As the convection moved further south, more unidirectional flow and less activity out ahead of the main convective line slightly reduced the threat for discrete convection to produce tornadoes.

Wind damage was reported in multiple counties across East Central Florida. A NWS Storm Survey team has surveyed damage in the Mascotte-Groveland and Ferndale areas on Wednesday and has identified the damage due to thunderstorm winds.

...TORNADO SAFETY INFORMATION...

WITH THE THREAT OF SEVERE WEATHER APPROACHING LATE TUESDAY INTO TUESDAY NIGHT...THIS IS A REMINDER FROM YOUR NATIONAL WEATHER SERVICE THAT KNOWING WHAT ACTIONS TO TAKE DURING THIS TIME WILL HELP KEEP YOU SAFE AND INFORMED.

JUST A FEW MINUTES CAN MAKE THE DIFFERENCE BETWEEN LIFE AND DEATH!

MAKE SURE YOU HAVE YOUR NOAA WEATHER RADIO IN GOOD WORKING ORDER...WITH FRESH BATTERIES IN CASE OF A POWER FAILURE. HAVING A NOAA WEATHER RADIO ALERT YOU OF AN APPROACHING TORNADO... ESPECIALLY IN THE MIDDLE OF THE NIGHT...HAS SAVED LIVES.

KNOW THE DIFFERENCE BETWEEN A WATCH AND A WARNING!

A TORNADO WATCH MEANS WEATHER CONDITIONS ARE FAVORABLE FOR SEVERE THUNDERSTORMS TO PRODUCE DAMAGING WINDS AND TORNADOES. A WATCH IS
ISSUED FOR SEVERAL COUNTIES AT A TIME AND IS USUALLY IN EFFECT FOR 6 OR MORE HOURS.

A TORNADO WARNING MEANS A TORNADO IS OCCURRING OR ABOUT TO OCCUR. IN OTHER WORDS...A TORNADO HAS BEEN SIGHTED...OR IS STRONGLY INDICATED BY DOPPLER RADAR. A TORNADO WARNING IS USUALLY ISSUED FOR ALL OR PART OF ONE COUNTY...AND ON OCCASION...PART OR ALL OF TWO OR THREE COUNTIES...AND IS USUALLY IN EFFECT FOR A 30 TO 60 MINUTE PERIOD.

KNOW WHAT TO DO WHEN A TORNADO THREATENS YOUR AREA!

WHEN A TORNADO WATCH IS ISSUED...HAVE A PLAN IN ORDER SO THAT YOU CAN QUICKLY MOVE TO A SAFE LOCATION IN THE EVENT THAT A WARNING IS ISSUED. IF YOU RESIDE IN A MANUFACTURED OR MOBILE HOME...OR IN A RECREATIONAL VEHICLE (RV)...THIS WOULD BE THE TIME TO CONSIDER MOVING TO A STURDIER BUILDING.

WHEN A TORNADO WARNING IS ISSUED...STAY INSIDE A STURDY BUILDING AND GO TO AN INTERIOR ROOM WITHOUT WINDOWS. IN A MULTI STORY BUILDING...GO TO THE LOWEST FLOOR. STAY IN A SAFE LOCATION UNTIL THE WARNING HAS EXPIRED AND THE THREAT OF A TORNADO HAS ENDED.

TORNADOES ARE MORE FREQUENT IN EAST CENTRAL FLORIDA THAN MOST PEOPLE REALIZE...AND LARGE...DEADLY LONG TRACK TORNADOES HAVE OCCURRED IN EAST CENTRAL FLORIDA DURING THE DRY SEASON.

THE DEADLIEST TORNADO OUTBREAK IN FLORIDA`S HISTORY OCCURRED THE NIGHT OF FEBRUARY 22 1998 WHEN SEVERAL LARGE TORNADOES SWEPT ACROSS CENTRAL FLORIDA KILLING 42 PEOPLE...DESTROYING 700 STRUCTURES AND CAUSING AN ESTIMATED 100 MILLION DOLLARS DAMAGE. THREE OF THE TORNADOES WERE RATED EF3 INTENSITY WHILE ANOTHER 2 TORNADOES WERE RATED AS EF2. THEN...IN THE EARLY MORNING HOURS OF FEBRUARY 2 2007...A SUPERCELL THUNDERSTORM PRODUCED TWO EF3 TORNADOES OVER NORTHERN LAKE COUNTY...KILLING 21 PEOPLE. THESE TORNADOES OCCURRED LATE AT NIGHT WHEN PEOPLE WERE SLEEPING WHICH LIKELY CONTRIBUTED TO THE LARGE NUMBER OF FATALITIES.

HERE ARE THE NOAA WEATHER RADIO TRANSMITTER FREQUENCIES FOR EAST CENTRAL FLORIDA AND THE COUNTIES THEY SERVE...

SUMTERVILLE (KPS-505)...SERVES LAKE COUNTY ON A FREQUENCY OF 162.500 MEGAHertz.

DAYTONA BEACH (KIH-26)...SERVES VOLUSIA...SEMINOLE...NORTHERN LAKE AND NORTHERN BREvard COUNTIES ON A FREQUENCY OF 163.400 MEGAHertz.

ORLANDO (KIH-63)...SERVES ORANGE...SEMINOLE...VOLUSIA...LAKE AND OSCEOLA COUNTIES ON A FREQUENCY OF 162.475 MEGAHertz.

MELBOURNE (WXJ70)...SERVES BREVARD...OSCEOLA AND NORTHERN INDIAN RIVER COUNTIES ON A FREQUENCY OF 162.550 MEGAHertz.

FORT PIERCE (WWF69)...SERVES INDIAN RIVER...SAINT LUCIE...OKEECHOBEE AND MARTIN COUNTIES ON A FREQUENCY OF 162.425 MEGAHertz.

BELLE GLADE (WXM-58)...SERVES SOUTHERN OKEECHOBEE COUNTY ON A FREQUENCY OF 162.400 MEGAHertz.

WEST PALM BEACH (KEC-50)...SERVES MARTIN COUNTY ON A FREQUENCY OF 162.475 MEGAHertz.
