SUBJECT: National Tsunami Warning Center Routine Communications 
Tests for the West Coast and Alaska Coast to Take Place on 
January 14, 2021 

The NWS National Tsunami Warning Center (NTWC) and coastal NWS 
Weather Forecast Offices (WFO) will perform routine monthly 
tsunami communication tests to ensure end-to-end readiness of 
NWS dissemination software and hardware on Thursday, January 14, 
2021, for Alaska and West Coast states.

The intended recipients of these communication tests include: 
designated national focal points, state/territorial warning 
points, coastal WFOs, U.S. Coast Guard, and critical military 
dissemination points.

Each test message will be clearly identified as such, and will 
be consistent with the product changes implemented by Service 
Change Notice 18-94: Changes to Valid Time Event Codes (VTEC) 
and Event Tracking Numbers (ETN) for Domestic Tsunami Test 
Products Effective April 1, 2019. 
https://www.weather.gov/media/notification/pdfs/scn18-
94vtec_tsunami.pdf 

VTEC codes for the test messages will start with the /T fixed 
identifier (versus /O for operational messages). To provide 
additional assurance that a test message is not inadvertently 
distributed as an actual Warning/Advisory/Watch product, Event 
Tracking Numbers (ETN) for the test messages will begin with 
9 as the leading digit of the four character code.

The text products affected by routine monthly tsunami
communication testing are the national tsunami products issued under the following AWIPS Product Identifiers (PIL) and World Meteorological Organization (WMO) Identifiers (ID):

<table>
