From: Allison Allen, Chief
 Marine, Tropical and Tsunami Services Branch

Subject: Transition Lake Erie Harmful Algal Bloom Webpage to Operational
Status: Effective May 1, 2019

Effective May 1, 2019, the Weather Forecast Office (WFO) Cleveland, OH, experimental Lake Erie Harmful Algal Bloom (HAB) webpage will transition to operational status. The webpage is routinely updated during the Lake Erie HAB season, generally May through October each year.

Through this webpage, WFO Cleveland serves as a service delivery outlet to assist the NOAA National Ocean Service dissemination of Lake Erie HAB Bulletins to a broader network of users. The webpage provides HAB and hydrometeorological information and serves as a resource for lakeshore communities, recreational users, boaters, beach goers, emergency managers, etc., to access harmful algal bloom conditions and projections on the lake and provide weather and marine forecasts for planning beach and lake activities in a single location. To access the Lake Erie HAB webpage, go to:

<https://www.weather.gov/cle/LakeErieHAB>

Additional information regarding the webpage can be found in the Product Description Document (PDD):

https://nws.weather.gov/products/PDD/PDD_LakeErieHAB_Webpage_Opl.pdf
