 -NOAAPORT
 Other NWS partners, Users and NWS Employees

From: Ben Kyger
 Director, NCEP Central Operations

Subject: Discontinuing Legacy ProbSevere Product from IDP
 Multi-Radar, Multi-Sensor Application Effective
 August 10, 2021

Effective on or about August 10, 2021, the National Centers for Environmental Prediction (NCEP) Central Operations (NCO) will discontinue the ProbSevere version 1 American Standard Code for Information Interchange (ASCII) product from the Multi-Radar, Multi-Sensor (MRMS) Integrated Dissemination Program (IDP). The ProbSevere version 2 JavaScript Object Notation (JSON) product will continue to be available from IDP MRMS and not be impacted by this change.

The IDP MRMS output can be found:

1. On the NCEP Web Services:

<http://mrms.ncep.noaa.gov/data/>

2. On the NCEP Local Data Manager (LDM) by requesting access:

https://www.nssl.noaa.gov/projects/mrms/MRMS_data.php

3. On Satellite Broadcast Network (SBN)/NOAAPort

ProbSevere is an operational short-term forecasting subsystem within the MRMS providing storm-based probabilistic guidance to severe convective hazards.

ProbSevere was implemented into NWS operations as part of the MRMS v12.0 upgrade in October 2020. The initial implementation contained both a legacy ProbSevere v1 ASCII product and an enhanced ProbSevere v2 JSON product. Both products provide probabilities of any type of severe weather. The ProbSevere v2 JSON product also contains probabilistic guidance for specific hazards. The ProbSevere v1 ASCII product is redundant. At this time, all users need to transition to the JSON formatted ProbSevere product:

MRMS_CONVECTPROB_[timestamp].ascii:

ProbSevere v1 product in ASCII format containing the probability of any type of severe weather. To be discontinued:

MRMS_PROBSEVERE_[timestamp].json:

ProbSevere v2 product in JSON format containing the probability of severe hail, probability of severe wind, probability of tornado, and probability of any type of severe weather. Available via SBN (World Meteorological Organization (WMO) code YAUF01), NCEP Local Data Manager (LDM), and web services. Not impacted by this change.

Additional information about ProbSevere can be found at:

https://cimss.ssec.wisc.edu/severe_conv/probsev.html

NCEP encourages users to ensure their decoders are flexible and are able to adequately handle changes in content order, changes in the scaling factor component within the product definition section (PDS) of the GRIdded Binary (GRIB) files, and any volume changes which may be forthcoming. These elements may change with future NCEP application upgrades. NCEP will make every attempt to alert users to these changes prior to any implementations.

NCEP will evaluate all comments to determine whether to proceed with this change. For questions regarding these application changes, please contact:

Tabitha Huntemann
NWS/Office of Science and Technology Integration
Silver Spring, MD
Tabitha.Huntemann@noaa.gov

Ken Howard
OAR/National Severe Storms Laboratory
Norman, OK
Kenneth.Howard@noaa.gov

For questions regarding the operational application, please contact:

Joshua Huber
NCEP/NCO Implementation and Data Services Branch
College Park, MD
