Acting Director, NWS Office of Observations

Subject: Satellite Broadcast Network to Test GOES-18 Imagery on June 14, 2022

As noted in Service Change Notice (SCN 22-37), for several weeks between August and November, 2022, the NWS Satellite Broadcast Network (SBN) will be transmitting Sectorized Cloud and Moisture Imagery (SCMI) from the GOES-18 satellite’s Advanced Baseline Imager (ABI), in place of GOES-17 ABI imagery.

To ensure readiness for the above, the SBN will transmit GOES-18 ABI imagery, in place of GOES-17 ABI imagery, on June 14, 2022, for a 4-hour test beginning at approximately 1600 Coordinated Universal Time (UTC). (The date has changed from that listed in SCN22-37.)

During this test, GOES-18 ABI imagery will still be at a “Beta” level of maturity: it will have been only minimally validated, and may contain significant errors. Nonetheless, GOES-18 ABI imagery obtained during this test will be advised for operational use, and may be shared without restriction.

During this test, GOES-18 ABI imagery will use the "GRW" channel of SBN (Port 1209, PID 107, the same channel used for GOES-17 (West) ABI imagery) and the same World Meteorological Organization (WMO) headers assigned to GOES-17 (West) imagery:

TIR[AHTW]{01..16} KNES or
TIU[A-Z]{01..16} KNES

as detailed in Service Change Notice SCN18-106.

Although the same WMO headers will be used for GOES-17 and GOES-18 ABI imagery, users can still determine the satellite source from the “satellite_id” attribute within all ABI imagery products.

Details on the GOES-18 Post-Launch Testing and Transition to Operations are available from the GOES-R Program at:

https://www.goes-r.gov/users/transitionToOperations18.html
Scientific details on these data products are available from the GOES-R Program at:

https://www.goes-r.gov/resources/docs.html

A Critical Weather Day or other factors may delay these changes on SBN.
