Service Change Notice 24-53
National Weather Service Headquarters Silver Spring MD
230 PM EDT Thu May 16 2024

To:       Subscribers:
- NOAA Weather Wire Service
- Emergency Managers Weather Information Network
- NOAAPort
Other NWS Partners and Employees

From:     Bruce Entwistle, Chief
Aviation and Space Weather Services Branch

Subject:  Operational Implementation of the updated Electric Power Dashboard Web Page on or about May 16, 2024

On or about May 16, 2024 at 1500 UTC the National Weather Service (NWS) Space Weather Prediction Center (SWPC) in Boulder, CO, will implement the operational version of the updated Electric Power Dashboard Web Page, located at:
https://www.swpc.noaa.gov/communities/electric-power-community-dashboard

The operational Electric Power Dashboard will be replaced by the updated Experimental operational Electric Power Dashboard currently hosted at: https://www.swpc.noaa.gov/products/electric-power-community-dashboard-experimental

The operational dashboard will retain its current URL after the replacement and the experimental URL will be retired.

The updated Electric Power Dashboard web page displays NOAA/SWPC’s Geoelectric Field Models. Products from the two geoelectric field models were deployed at SWPC on June 15, 2023. These models provide near real-time maps and gridded data to indicate the induction hazard level for electrical power grids. One model uses a 1D conductivity data set that covers the Continental United States (CONUS) and Canada, and the other uses a 3D empirical conductivity data set that provides more detailed information for the CONUS. Both geoelectric field models are available on their own product page at: https://www.swpc.noaa.gov/products/geoelectric-field-models-1-minute.

Providing access to these products on the Electric Power Dashboard will improve the visibility of the information to the intended user community. In addition, the geoelectric model outputs will be placed in further context with other related products already hosted on the dashboard, potentially improving user interpretation of geomagnetic field conditions.
If you have any questions, please contact:

Dr. Christopher Balch  
Geoelectric Research Scientist  
CIRES/NOAA Space Weather Prediction Center  
Boulder, CO  
Email: christopher.balch@noaa.gov

and

Ms. Amy Macpherson  
Acting National Space Weather Program Manager  
National Weather Service Headquarters  
Kansas City, MO
