SUBJECT: Use of Mixed Case Letters in Area Forecast Discussion, Regional Weather Summary and Local Public Information Statement Products at Select Weather Forecast Offices: Effective on or About October 4, 2011

Effective on or about Tuesday, October 4, 2011, select NWS Weather Forecast Offices (WFOs) will begin issuing Area Forecast Discussion (AFD), Regional Weather Summary (RWS) and local Public Information Statement (PNS) products using upper and lowercase alphabetic letters and an expanded punctuation and character set (Table 1). This change is based on requests from many NWS partners and users. The NWS first began seeking comments regarding mixed case text products in May 2010:

https://www.weather.gov/media/notification/pdfs/pns10mixed_case.pdf

As part of a risk-reduction effort using a national, non-operational product, NWS has been issuing National PNS products using mixed case letters and the expanded punctuation/character set since August 2010:

NWS partners and users of these WFO text products are encouraged to comment regarding this next step in the risk reduction effort. User feedback will help the NWS better plan the eventual transition of all NWS text products to mixed case and
the expanded character set. Please provide comments by September 19, 2011, at:

Use of mixed case letters in text products will make them easier to read and allow users to click on internet links directly rather than converting them to lowercase or mixed case. Additional punctuation and other characters that are part of the international reference Alphabet no. 5 will also be included as appropriate. The ampersand and less than symbols cannot be used in this message because of RSS restrictions and are in parens.

Table 1: Allowed Mixed Case Character Set

"space" ! " # $ % (ampersand symbol) ` ( ) * , - . / 0 1 2 3 4 5 6 7 8 9 : ; < = (greater than symbol) @ A B C D E F G H I J K L M N O P Q R S T U V W X Y Z [ \ ] ^ _ ` a b c d e f g h i j k l m n o p q r s t u v w x y z { | } ~

If this next phase of our risk reduction effort is implemented, partners and users will have the opportunity to further identify and correct any anomalous behavior of their systems and their
customer’s systems that may be caused by mixed case and the expanded punctuation/character set in these WFO text products.

These products will continue to be issued using mixed case letters until each participating WFO transitions from AWIPS I to AWIPS II. Mixed case letters and the expanded punctuation/character set for text products may not be supported in the initial AWIPS II software build. The NWS is working to minimize the impact of this transition on NWS users and will issue additional notices and statements as updated user information is available. Partners and users should be aware these products may revert back to using all uppercase letters at the end of this phase of the risk reduction effort.
