Subject: Soliciting Comments on the Experimental National Water Resources Outlook Webpage through September 30, 2013

Effective October 1, 2012, and continuing through September 30, 2013, the NWS is seeking user feedback on the Experimental National Water Resources Outlook Webpage.

The Experimental National Water Resources Outlook Webpage provides a single Web page for displaying water resources information from all River Forecast Centers. Water resources information includes expected streamflow conditions for the next 30, 60 and 90 days. A range of flows is provided for each time period. Forecast of the most likely value are color coded according to percentage of normal streamflow. More specific information for individual forecast points is available by drilling down to points. Gridded information, such as soil moisture and snow water equivalent, may also be provided.

The Experimental National Water Resources Outlook Webpage is available at:

http://wateroutlook.nwrfc.noaa.gov

Users are encouraged to provide feedback on this experimental Webpage by using the brief survey form available at:
