Subject: Amended: Soliciting Comments on Experimental Storm
Prediction Center (SPC) Probabilistic Day 3-8 Fire
Weather Outlooks through September 29, 2015

Amended to extend comment period through September 29, 2015

The NWS is continuing to collect comments through September 29, 2015, regarding six Fire Weather Outlook graphics for the Conterminous United States (CONUS). These graphics are posted on the SPC Web site on an experimental basis.

These graphics were previously available for comment:

http://www.nws.noaa.gov/os/notification/pns11prob_spc_fire.txt

Feedback from the previous experimental period indicated that the combined 3-8 day forecast graphic was difficult to interpret. As an improvement, the SPC is now providing six individual daily web graphics (Day 3, 4, 5, 6, 7 and 8) of the two Probabilistic Fire Weather Outlooks:

- 1) Probability of Dry Thunderstorms Fire Weather Outlook
- 2) Probability of Strong Winds, Low RH, and Warm Temperatures Fire Weather Outlook

These graphics are available on the SPC's Day 3-8 Fire Weather Forecast web page:

http://www.spc.noaa.gov/products/exper/fire_wx/

Feedback and comments concerning these experimental graphics are welcome through September 29, 2015, via a link on the web page or online at:

<http://www.nws.noaa.gov/survey/nws-survey.php?code=spc38firewx>

More details regarding these elements are available in a Product Description Document (PDD) at:

<https://products.weather.gov/viewExperimental.php?selrow=434>
