Subject: Corrected: Soliciting Comments until December 30, 2016, on the
Experimental Tampa Bay Marine Channel Forecast

Corrected for issuance date/time in header, name of branch, and email
address of Marcus Austin.

The NWS Weather Forecast Office (WFO) Tampa Bay Area is seeking user comments on the Experimental Tampa Bay Marine Channel Forecast through December 30, 2016. The Tampa Bay Marine Channel Forecast was developed as part of WFO Tampa Bay's Weather-Ready Nation Pilot objective. The Marine Channel Forecast uses local NWS digital forecast data for six of the seven weather elements in the product: winds, gusts, waves, weather, rain chance and hazards. For the seventh element, water level relative to mean sea level, Marine Channel Forecast currently populates data from the Extra Tropical Surge and Tide Operational Forecast System (ESTOFS) model produced by the NWS's Ocean Prediction Center (OPC).

Forecasts are produced at 13 points along the Tampa Bay shipping channel. These 13 points were considered by a diverse group of mariners to be critical points of weather information along the channel. The Marine Channel Forecast is displayed on a static Google map with the Tampa Bay shipping channel and the forecast points overlaid. Users may click on any forecast point to view the forecast.

The comment period is being extended to solicit additional comments on new enhancements to the Marine Channel Forecast. This includes alterations to the current layout (new tabs) and the addition of cross section forecasts for the route. The Marine Channel Forecast is currently available at the following web address:

<http://www.srh.noaa.gov/tbw/?n=marinechannelsforecast>

Users are encouraged to provide feedback on this experimental product by using the brief survey and comment form at:

<http://www.nws.noaa.gov/survey/nws-survey.php?code=TBMCF>

or provide comments directly to:

marcus.austin@noaa.gov

At the end of the comment period, if comments are favorable, the Marine Channel Forecast will be evaluated for national availability. At that time, the NWS will then decide whether to transition the product to operational, extend the comment period or discontinue the product.

You may obtain more information on this product online at:
