Subject: Soliciting Comments on Experimental Hurricane Threats and Impacts Web Interface through November 30, 2015

Effective August 17, 2015 and continuing through November 30, 2015, the NWS is seeking user feedback on an experimental Hurricane Threats and Impacts Web Interface (HTI-Web).

The experimental HTI-Web is an internet-based decision-support service designed to help users quickly interface with local hazard information whenever tropical storm or hurricane watches and/or warnings are in effect along the United States East and Gulf coasts, including Puerto Rico. Local threat assessments and corresponding potential impacts information about tropical storm or hurricane wind, storm surge, flooding rain, and tornadoes are provided by coastal Weather Forecast Offices (WFOs).

The webpage is based upon official tropical storm and hurricane forecast and warning products provided by WFOs and NWS’ National Centers.

Updates will be provided at least every six hours, and will cease when watches and/or warnings are no longer in effect.

Further information on HTI-Web can be found in the Product Description Document located at:

The following experimental HTI-Web will be accessible beginning
Monday, August 17, 2015:

http://preview.weather.gov/hti

Please provide feedback on the interactive web page at:

For questions regarding this notice, please contact:

Michael Dion
