The National Centers for Environmental Prediction Central Operations (NCO) is soliciting comments on changes to the Point Forecast application at:  
http://forecast.weather.gov

The purpose of these changes is to create a more usable interface with no duplication of service to users while providing a more modern service-oriented data structure.

The proposal to update the Point Forecast application will alter/deprecate a significant number of Uniform Resource Locators (URLs). Although in many cases the functionality is the same, the structure of the new site requires modifications to the URL. Users will be automatically redirected where possible to ease this transition for public customers; however, partners running automated processes to get NWS data from forecast.weather.gov will need to make sure that either their application properly follows these redirects or points directly to the new URL. The following pages and their new equivalent pages are below:
