Corrected to identify WFO Honolulu as HFO.

Effective immediately and continuing through January 6, 2017, the National Weather Service (NWS) is seeking user feedback on proposed changes to the HLS issued by WFO HFO during the 2017 hurricane season.

WFO HFO proposes to issue the HLS product in the same format as those issued for the Atlantic hurricane basin during the 2015 and 2016 hurricane seasons on an operational basis.

The following changes to the HLS were operationally implemented in 2015 for the Atlantic Hurricane basin:

The HLS is a non-segmented product – No Universal Geographical Code (UGC).

No Valid Time Event Codes (VTEC).

Succinct meteorological discussion, impact and preparedness product for land areas only. Product is intended for emergency managers, public and media.

Additional information on UGC and VTEC can be found in NWS Instruction (NWSI) 10-1701 and NWSI 10-1703 respectively. These directives are available online at:
An example of the HLS format proposed to be issued by WFO HFO beginning in the 2017 hurricane season can be found at:

http://www.nws.noaa.gov/os/pns/HLSHFO_fullTest-1.txt

If this change becomes operational, the HLS will no longer be the disseminating mechanism for land-based tropical cyclone watches and warnings for WFO HFO. Feedback is currently being solicited on implementing the Hurricane Local Watch/Warning product (TCV) (operational at WFOs in the Atlantic Hurricane basin) as the new mechanism for issuing tropical watches/warnings at WFO HFO in 2017 at this survey:

These proposed changes are already operational at NWS Atlantic basin WFOs. For further details, please see Service Change Notice 14-66:

https://www.weather.gov/media/notification/pdfs/scn14-66hls_aab.pdf

Feedback on the new HLS format will be accepted via electronic survey at the following link:

If you have any questions on the proposed changes, please contact:
