Subject: Text format for Fire Weather Planning Forecast
 in NWS Western Region will become Operational
 on February 26, 2013

Effective Tuesday, February 26, 2013, at 1800 Coordinated Universal Time (UTC), the alternate text format of the Fire Weather Planning Forecast (FWF) will become operational in the NWS Western Region. This product format has been in experimental status. Based on favorable public comments, it is being made operational.

This change will improve fire weather services to primary partners and users in Western Region by reducing the time needed by NWS forecasters to edit the FWF. The FWF text format uses left-justified asterisks to begin each line of text. The asterisks help maintain proper word wrapping and indentations in a text editor, significantly reducing the amount of time needed to edit the product before dissemination. The rest of the FWF product is left unchanged as are all other fire weather products and services.

An example of the text format FWF is online at:

http://www.wrh.noaa.gov/total_forecast/getprod.php?wfo=sew&pil=wf&sid=sew
