Subject: Aviation Winter Weather Dashboard Operational on November 25, 2013

Effective Monday, November 25, 2013, at 1800 Coordinated Universal Time (UTC), the NWS Aviation Weather Center in Kansas City, MO, will implement the Aviation Winter Weather Dashboard (AWWD) as an operational product.

Beginning November 25, 2013, the AWWD will be operationally available 24 hours a day, 7 days a week.

The AWWD depicts a potential winter weather impact to the core 30 airports. The AWWD is updated four times per day. The website display indicates the potential impact to each airport through a matrix of color-coded boxes that depict nominal (green), slight (yellow), moderate (orange), and high (red) impact through 87 forecast hours. The impact information is calculated using the operational Short-Range Ensemble Forecast (SREF) numerical weather prediction system and climatology.

The AWWD was developed to support the Federal Aviation Administration Air Traffic Control System Command Center. AWWD supports long-range strategic winter weather planning by providing guidance on the impact from winter weather at major airports.

The AWWD will only be available at:

http://www.aviationweather.gov/decisionsupport/winterdashboard
The AWWD renders the potential impact to each airport, at 3-hourly forecast intervals, based on certain thresholds of forecast winter weather conditions. The probability of accumulated snowfall/ice pellets, accumulated freezing rain, and visibility are used to determine the particular impact category assigned to each airport. The airports are split into four separate impact groups, based upon the airport’s ability to operate during winter weather conditions, which, in turn, is based on annual snowfall climatology. Each group has a specific probabilistic threshold for snowfall/ice pellets, freezing rain, and visibility that determine the category.
