From:     Craig Hodan  
          Chief, NWS Dissemination Systems Branch

Subject: Update: NOAA Weather Wire Service NWS Enterprise Architecture  
Solution (NWWS-2) Begins April 1, 2015

The NOAA Weather Wire Service (NWWS-2) begins operation today. Satellite connectivity is by Satellite Broadcast Network (SBN)/NOAAPort Channel 201 using a NOVRA S300 or similar satellite receiver. Internet Open Interface (OI) is provided by the NWS Internet Dissemination System (NIDS).

For NWWS-2, both product streams (Satellite and OI) are required for high product availability. NWS has developed an End User Client (EUC) software application that provides three product stream ingest capabilities:

- Satellite Only
- Open Interface Only, and
- Both Satellite and Open Interface (High Availability)

Users must submit a signed disclaimer to the Program Manager before release of the EUC. For more information on the disclaimer, go to:

<http://www.nws.noaa.gov/nwws/configuration.html>

The legacy CSC service will end June 30, 2015. NWWS users must use NWWS-2 compatible hardware configurations and client software by that date to continue receiving NWWS alerts and warnings.

For more information, please contact:

Greg Zwicker  
NWWS Program Manager  
Office of Operational Systems  
Silver Spring, MD
