From: George McKillop
 Acting Chief, Hydrologic Services, Eastern Region Headquarters

Subject: Change to the Web page address for the NWS Hydrologic Short-term
 Meteorological Model-Based Ensemble Forecasting System
 Effective January 20, 2016

Effective January 20, 2016, (backup date January 26, 2016), the NWS is changing the Web address for the short-term Meteorological Model-based Ensemble Forecasting System (MMEFS) from:

<http://www.erh.noaa.gov/mmefs/index.php>

to:

<http://www.weather.gov/erh/mmefs>

The MMEFS uses temperatures and precipitation output from the National Centers for Environmental Prediction (NCEP) global ensemble forecasts, the short-range ensemble forecasts and the North American ensemble forecasts. The individual members are processed with the Community Hydrologic Prediction System at the individual River Forecast Centers to generate a set of possible river forecast outcomes. The MMEFS graphics have been updated based on social science analysis performed by the Nurture Nature Center, which was funded by a NOAA Grant:
