Subject: Air Quality Prediction Update:
 Effective June 13, 2017

Effective on or about Tuesday, June 13, 2017, beginning with the 1200 Coordinated Universal Time (UTC) run, the National Centers for Environmental Prediction (NCEP) will upgrade the Air Quality Model (AQM) capability over CONUS only. The AQM uses the Community Multi-scale Air Quality (CMAQ) modeling system to provide ozone and fine particulate matter air quality predictions.

This upgrade will do the following:

- Update the chemical transport model to CMAQ V5.0.2
- Update the National Emissions Inventory (NEI) 2011 Point Source Emissions to projections for 2017
- Update U.S. Forest Service BlueSky smoke emissions system to V3.5.1
- Add 24-hour "analysis cycle" to include wildfire emissions when they were observed
- Update the bias correction technique for fine particulate matter (PM2.5) forecast guidance to the Kalman Filter Analog technique (KFAN)
- Update dust-related aerosol species at the CMAQ lateral boundaries to use the NEMS Global Aerosol Capability (NGAC) V2 forecasts

The expected impact of these changes includes:

- Improved raw and bias corrected fine particulate matter (PM2.5) products especially near wild fires
- Improved summertime surface ozone predictions especially in coastal areas

NOTE: These changes will only be applicable to CONUS results. Alaska and Hawaii will continue using CMAQ v4.

Predictions for the updated AQM over the CONUS region will be

made available through a parallel feed at the following location:

<http://para.nomads.ncep.noaa.gov/pub/data/nccf/com/aqm/>

Experimental CMAQ ozone and PM2.5 predictions over CONUS will be available on the EMC air quality web page at:

<http://www.emc.ncep.noaa.gov/mmb/aq/cmaq/web/html>

Experimental CMAQ bias corrected PM2.5 predictions over CONUS will be available on the EMC air quality web page at:

1) The forecast time range header for the ozone daily maximum files will be corrected.

06 UTC data is available on NWS servers with these names:

- ds.mozone01.bin Day 1 will change to "-1-22 forecast hours" from "-2-21 hour"

- ds.mozone08.bin Day 2 will change to "29-52 forecast hours" from "30-49 hour"

12 UTC data is available on the NWS servers with these names:

- ds.mozone01.bin Day 1 will change to "-7-16 hour" from "-8-15 hour"

- ds.mozone08.bin Day 2 will change to "23-46 hour" from "24-47 hour"

06 UTC data is available on the NCEP servers with these names:

- aqm.t06z.max_1hr_o3.227.grib2 Day 1 will change to "-1-22 hour" from "-2-21 hour"

- aqm.t06z.max_8hr_o3.227.grib2 Day 2 will change to "29-52 hour" from "30-49 hour"

12 UTC data is available on the NCEP servers with these names:

hour" from "24-47 hour"

2) All output CONUS files will increase in size as land-water bit mask is included, but variables and extent will remain unchanged.

II. New Products

1) CONUS domain raw and bias corrected PM2.5 prediction files will be sent to the NWS website for the National Digital Guidance Database (NDGD).
