FROM: Mark B. Miller
 Director, Surface and Upper Air Division
 Office of Observations

SUBJECT: Transition of Manual Radiosonde Observations to Automated
 Radiosonde Observations at King Salmon, Alaska, on or
 after May 17, 2019

Effective on or after May 17, 2019, radiosonde observations (RAOB) from King Salmon, AK, WMO# 70326, Station ID PAKN, will be transitioned from the manually launched Lockheed Martin 1680 MHz LMS6 radiosonde to the Vaisala 403 MHz RS41-SGPA radiosonde using the Vaisala Autosonde as the launch vehicle.

During the transition period of up to 30 days, dual radiosonde flights may be performed until the Vaisala Autosonde System is declared operational for the regularly scheduled observations of 00Z and 12Z.

Messages from the Vaisala Autosonde currently do not contain the following components: RADAT, High Res BUFR, NCEI archive format. A software update will be implemented in 2019 that will produce these data.

For additional information on the message requirements, see WMO 306 Manual on Codes (International Codes):

- Volume I.1 Part A - Alphanumeric Codes
- Volume I.2 Part B - Binary Codes
- Volume II Regional Codes and National Coding Practices (WMO Region IV)

NWS will send a follow up Service Change Notice when the software update is implemented and the Autosonde RAOB products contain these components.

If you have questions or feedback, please contact:
