From: Grant A. Cooper
 Acting Director
 National Center for Environmental Prediction

Subject: Implement Near Sea Surface Temperature to replace
 RTGSST and SSTOI including an update to CDAS SST
 output effective on or about February 11, 2020

Effective on or about February 11, 2020, with the 1200 Coordinated Universal Time (UTC) cycle, the National Centers for Environmental Prediction (NCEP) will implement the Near Sea Surface Temperature (NSST) version 1.0.0. NSST will interpolate the Global Data Assimilation System (GDAS) NSST foundation temperature analysis to generate SST analysis files. These files are currently produced by the Real-Time Global Sea Surface Temperature (RTGSST) and Optimum Interpolation Sea Surface Temperature (SSTOI) analyses.

The structure of the output files (location, name, records) will not change with this upgrade, however the input to NSST is GDAS 1200 UTC surface analysis and 1200 UTC blended sea ice analysis, with surface masks, monthly RTG SST climatology and monthly salinity climatology as ancillary data sets to support the interpolation. The input for the current SST analyses is observations from surface marine platforms and satellite retrievals supplemented by a sea ice concentration analysis.

The below data on NCEP Web Services will be impacted by this change:

The science used to generate files under the following directories will change, but file structure will remain the same:
<https://nomads.ncep.noaa.gov/pub/data/nccf/com/gfs/prod/sst.YYYYYMMDD>
<ftp://ftp.ncep.noaa.gov/pub/data/nccf/com/gfs/prod/sst.YYYYYMMDD>
Where YYYY is year, MM is month, DD is day

The following files will be impacted by the science change and will also no longer include the relative error variance record:
<https://nomads.ncep.noaa.gov/pub/data/nccf/com/cdas/prod/cdas.YYYYYMMDD/cdas.t00z.sstgrb.grib2>
<ftp://ftp.ncep.noaa.gov/pub/data/nccf/com/cdas/prod/cdas.YYYYYMMDD/cdas.t00z.sstgrb.grib2>
Where YYYY is year, MM is month, DD is day and CC is the cycle

The below WMO headers will be impacted; science will change but file structure will remain the same:

HTXA88 KWBC

ETWA88 KWBI

For questions regarding these SST production and dissemination changes, please contact:

Vijay Tallapragada

EMC Modeling and Data Assimilation Branch Chief

Vijay.Tallapragada@noaa.gov

For questions regarding the data flow aspects of these data sets, please contact:

Carissa Klemmer

NCO Implementation and Data Services Branch Chief

ncep.list.pmb-dataflow@noaa.gov
