Subject: Third Quarter 2011 Dates for Termination of Automated Radiotheodolite Tracking (ART) and Radio Direction Finding Radiosondes (RDF) with Installation of Radiosonde Replacement Systems (RRS)

From April 25 through May 15, 2011, three Upper Air (UA) sites are scheduled to receive RRS Upgrades. Specific dates are as follows:

<table>
<thead>
<tr>
<th>STATION NAME</th>
<th>WMO #</th>
<th>STN ID</th>
<th>OUTAGE DATES</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHUUK</td>
<td>91334</td>
<td>PTKK</td>
<td>April 25, 2011</td>
</tr>
<tr>
<td>POHNPEI</td>
<td>91348</td>
<td>PTPN</td>
<td>May 5, 2011</td>
</tr>
<tr>
<td>MAJURO</td>
<td>91376</td>
<td>PMKJ</td>
<td>May 16, 2011</td>
</tr>
</tbody>
</table>

These UA sites may be out of service for as long as 10 days. When the NWS UA observations resume, the RRS will be gathering meteorological data from Global Positioning System (GPS) radiosondes.

The NWS describes the RRS release point location with the National Geodetic Survey (NGS) Online Positioning User Service (OPUS) solution. This is a datum combination that relies on North American Datum of 1983 (NAD83) for latitude and longitude, whereas the release point elevation is based on North American Vertical Datum 1988 (NAVD88) with the GEOID03 model. By contrast the GPS radiosonde flight information of latitude and longitude and altitude will rely on the world geodetic system of 1984 (WGS84) standard.
Parts of the UA coded messages will be significantly longer with RRS conversion. NWS has coordinated with its partners on the longer length of these messages.

The format of the messages will be the same World Meteorological Organization (WMO) format for coded UA messages used with the MicroArt legacy system. The number of levels in the coded messages will be two to three times greater for the TTBB and TTDD. As a result, two categories of Advanced Weather Interactive Processing System (AWIPS) text products will increase in size: SGL and ABV. The number of levels in the TTAA, TTCC, PPBB and PPDD parts will be relatively unchanged. These changes reflect updated coding practices and higher resolution level selection criteria. The maximum size limits of the parts of the coded messages are as follows:

- TTAA: 15 Levels
- TTCC: 10 Levels
- TTBB: 135 Levels
- TTDD: 40 Levels
- PPBB: 40 Levels
- PPDD: 40 Levels

In addition, the 31313 message indicator associated with various parts of the message will be included with each part of the thermodynamic message parts.

For additional information on the message requirements, see WMO 306 Manual on Codes (International Codes): Volume I.1 Part A - Alphanumeric Codes and Volume II Regional Codes and National Coding Practices. Users can find information on the levels selection criteria used in NWS coding software online at:
