-NOAA Weather Wire Service  
-Emergency Managers Weather Information Network  
-NOAAPORT  
Other NWS Partners, Users and Employees

From: Timothy McClung  
Science Plans Branch Chief  
Office of Science and Technology

Subject: Amended Hurricane Weather and Research Forecast  
(HWRP) Model Changes: Effective July 23, 2013

Amended to reschedule the effective date from July 16, 2013, to  
Tuesday July 23, 2013

Effective on or about Tuesday, July 23, 2013, beginning with the  
1200 Coordinated Universal Time (UTC) run, the National Centers  
for Environmental Prediction (NCEP) will upgrade the HWRP  
Princeton Ocean Model (POM) coupled system.

The FY2013 HWRP model will be implemented on NCEP's new Weather  
and Climate Operational Supercomputing System (WCOSS), scheduled  
to become the operational machine on or about July 23, 2013. A  
separate TIN will be issued announcing the operational switch to  
the WCOSS system. In the event that switch date is changed, this  
TIN will be modified to reflect that change in implementation  
date.

Forecasts from the upgraded FY2013 HWRP model will be made  
available through a parallel feed from WCOSS starting around June  
15, 2013. The HWRP GRIB products from WCOSS are disseminated via  
the NCEP Parallel FTP server:

<ftp://ftpt.ncep.noaa.gov/com/hur/prod/>

and the products will be displayed through NCEP's parallel Model  
Analysis and Guidance (MAG) website:

<http://magpara.ncep.noaa.gov/>

The 2012 version of operational HWRP model will continue  
providing forecasts through NCEP Central Computing System (CCS)  
until the WCOSS machine goes live on or about July 23, 2013. The  
HWRP GRIB products are not available on NOAAPORT or AWIPS but

they are disseminated via the NCEP production FTP server:

<ftp://ftp.ncep.noaa.gov/pub/data/nccf/com/hur/prod/>

The scientific enhancements include the following:

- Implement HWRF GSI V3.7 one-way hybrid EnKF-3DVAR data assimilation with GDAS forecasts as first guess and 80-member GFS EnKF forecasts for ensemble covariances, assimilation of all conventional data and provision to assimilate real-time inner-core TDR/FL/SFMR/Dropsonde recon datasets
- Improve storm size correction in the vortex initialization, modified filter domain and use GFS vortex when the storm is weaker than 16 m/s
- Upgrade the nest movement algorithm using 9 parameters based on NCEP tracker
- Redesign nest-parent interpolations for improved treatment of nest boundaries
- Increase frequency of physics calls from 180 sec. to 30 sec. and increase size of the third domain from 5-deg x 5.5-deg to 6-deg x 6.5-deg
- Modify GFS PBL to include variable critical Richardson number
- Fix bug for GFDL radiation
- Remove flux truncation from HWRF to POM
- Improve HWRF Unified Post Processor to reduce domain discontinuities in the simulated satellite imagery products

The model has been extensively tested with a combination of all the upgrades listed above for a 3-year sample of cases. The results showed impressive and remarkable results. For Atlantic basin track, the HWRF is improved by ~5-15% and now appears competitive with the GFS. For intensity, the model reduces errors by ~15%, has demonstrated skill greater than that of the NHC official forecast and greater than that of the statistical models. Similar improvements are noted for the Eastern North Pacific basin as well.

There are no changes to existing products or their contents. There will be an increase of roughly 1GB in product size due to expanded size of the third domain. The grid is not changing, but additional points will now have non-missing values.

More details about the HWRF-POM are available at:

<http://www.emc.ncep.noaa.gov/HWRF/index.html>

NCEP encourages users to ensure their decoders are flexible and are able to adequately handle changes in content order, changes in the scaling factor component within the product definition section (PDS) of the GRIB files, and any volume changes which may be forthcoming. These elements may change with future NCEP model implementations. NCEP will make every attempt to alert users to these changes prior to any implementations.

For questions regarding these model changes, please contact:

Dr. Vijay Tallapragada
