Technical Implementation Notice 16-22
National Weather Service Headquarters Washington DC
1020 AM EDT Mon Sep 26 2016

To: Subscribers:
-NOAA Weather Wire Service
-Emergency Managers Weather Information Network
-NOAAPORT
Other NWS Partners and NWS Employees

From: Tim McClung
Portfolio Manager
Office of Science and Technology Integration

Subject: Amended: The Nearshore Wave Prediction System (NWPS)
data will be provided over the Satellite Broadcast
Network (SBN) and NOAAPORT on or about October 25,
2016, for Western, Pacific and Alaska Region WFOs

Amended to reflect GRIB2 file packing modifications and update
parallel data availability

Effective on or about Tuesday, October 25, 2016, additional NWPS
data will be added to the SBN and NOAAPORT. The NWPS is run
2-4 times per day, on-demand, depending on the coastal Weather
Forecast Office (WFO). On or about October 25, 2016, data for
13 additional coastal WFO domains (Western, Pacific and Alaska
Regions) will be available. This addition will append the data
from the 23 Eastern and Southern Region WFOs implemented in
February 2016, bringing the total to 36 coastal WFO domains.
The 3-hourly grids will be disseminated in GRIB2 format. Grid
resolutions will be dependent upon individual coastal WFO.
This upgrade also features minor modifications to the GRIB2
file encoding and to the output directory structure of all
36 domains.

The parameters associated with the messages at these resolutions
are:

Q - Wind Speed
R - Wind Direction
Z - Current speed
Z - Current direction
Z - Water level
C - Wave Height
D - Water Depth
J - Peak Frequency/Period
K - Peak Direction
Z - Wave Length
O - Wave height of swell waves

O - Partitioned swell wave height
Y - Partitioned swell peak period
P - Partitioned swell mean direction

Data volume will vary depending on coastal WFO. The average total data volume is approximately 65 MB per cycle, 2 times per day, for each of the remaining 13 coastal WFO domains.

CG grids are described as follows:

CG0 grid: partition output on overall computational domain (low- resolution) for a given WFO

CG1 grid: integral output on overall computational grid for a given WFO

CG2 grid: integral output on first nested grid where applicable

CG3 grid: integral output on second nested grid where applicable

CG4 grid: integral output on third nested grid where applicable

CG5 grid: integral output on fourth nested grid where applicable

Each WFO may produce up to 5 grids. Not all WFOs are producing all 5 grids for their County Warning Area (CWA).

CG0 grid messages are approximately 8 MB per WFO. The total volume (13 coastal WFOs) is 104 MB per cycle, 2 times per day.

CG1 grid messages are approximately 29 MB per WFO. The total volume is 377 MB per cycle, 2 times per day.

CG2 grid messages are approximately 7 MB per WFO. The total volume is 91 MB per cycle, 2 times per day.

CG3 grid messages are approximately 7 MB per WFO. The total volume is 91 MB per cycle, 2 times per day.

CG4 grid messages are approximately 7 MB per WFO. The total volume is 91 MB per cycle, 2 times per day.

CG5 grid messages are 7 MB per WFO. The total volume is 91 MB per cycle, 2 times per day.

The total volume (13 coastal WFOs) for all resolution files is approximately 845 MB per cycle, 2 times per day.

The following summarizes the generic WMO Headers for the NWPS data: T1T2A1A2iiCCCC, where:

T1 = E

T2 specifies the parameters (stated above)

A1 = A for CG0 grid; B for CG1 grid; C for CG2 grid; D for CG3 grid; E for CG4 grid, and F for CG5 grid

A2 specifies forecast hours: A=00, B=03, C=06, D=09, E=12, F=15, G=18, H=21, I=24 and 27, J=30 and 33, K=36 and 39, L=42 and 45, M=48 and 51, X=54 and 57, N=60 and 63, Y=66 and 69, O=72, 75, 78 and 81, P=84, 87, 90 and 93, Q=96, 99, 102

ii = 88 (specifies surface)

CCCC corresponds to K, appended by the 3-letter AWIPS code for the generating the 13 coastal WFO domains:

SEW - Seattle, Washington
PQR - Portland, Oregon
MFR - Medford, Oregon
EKA - Eureka, California
MTR - Monterey, California
LOX - Los Angeles, California
SGX - San Diego, California
HFO - Honolulu, Hawaii
GUM - Tiyan, Guam
AJK - Juneau, Alaska
AER - Anchorage, Alaska
ALU - Anchorage (Aleutian Islands), Alaska
AFG - Fairbanks, Alaska

OUTPUT DATA:

In addition to NOAAPORT, data will be available through the NCEP ftp/http services:

<http://nomads.ncep.noaa.gov>
<ftp://ftp.ncep.noaa.gov>

On Implementation Day the data for the new domains will be available at:

</pub/data/nccf/com/nwps/prod>

The modified file format is the following:

For each of the 2-character regional codes (sr, er, wr, pr, ar) the GRIB2 files are listed under date (YYYYMMDD), 3-character WFO code (listed above, in lower case), run cycle (CC) and model domain (CG = CG1, CG2, CG3, CG4, CG5; or CG0). The run cycle always corresponds to the analysis time of the run (HH). All output variables pertaining to the run domain are stored in a single GRIB2 file. Note that since the runs are on demand, not all CC cycles will be produced during a given YYYYMMDD.

REGION.YYYYMMDD/WFO/CC/CG/WFO_nwps_CG_YYYYMMDD_HH00.grib2

REGION.YYYYMMDD/WFO/CC/CG0/WFO_nwps_CG0_Trkng_YYYYMMDD_HH00.grib
2

GRIB2 ENCODING CHANGES:

The encoding of exception values has been changed from various codes (-9.0, -99.0, -999.0) to a consistent value of 9.999e+20, covering the full domain, which is interpreted as "NO DATA" values by the AWIPS2 Grib2Decoder. For the CG0 GRIB2 files, this results in a switch from the use of "NO BIT-MAP" to "with BIT-MAP 0" in the encoding (see GRIB2 - Section 6). Furthermore, the decimal precision at which the CG0 GRIB2 files are packed have been increased.

The NWPS website is located at:
