5:48 AM EDT

- **Storm Total Rainfall: 2 to 4 inches;** locally higher amounts possible.
- **Rainfall Rates:** 0.5 to 1 "/hr.
- **Impacts:** Localized/Scattered flash flooding of urban areas, roads, and along small streams and creeks is likely. Flooding along larger streams and rivers and is unlikely at this time due to dry antecedent conditions.

- This afternoon through Tuesday evening. The heaviest rainfall is expected from this evening through midday Tuesday.
- Areas north and west of NYC and southern CT are expected to receive the heaviest rainfall.

- **Flood Watch:** In effect starting this afternoon through Tuesday afternoon.

- There is moderate confidence in heavy rain showers and a few embedded thunderstorms developing, but it is uncertain how widespread the threat for flash flooding will be.
- Lower confidence in rainfall amounts over NE NJ, NYC, and Long Island with uncertainty in the exact position of frontal boundary.

- By 6AM Tuesday unless significant forecast changes occur.

Excessive Rainfall/Flash Flood Outlook

Understanding WPC Excessive Rainfall Risk Categories

No Area/Label	MARGINAL (MRGL)	SLIGHT (SLGT)	MODERATE (MDT)	HIGH (HIGH)
Flash floods are generally not expected.	Isolated flash floods possible	Scattered flash floods possible	Numerous flash floods likely	Widespread flash floods expected
	Localized and primarily affecting places that can experience rapid runoff with heavy rainfall.	Mainly localized. Most vulnerable are urban areas, roads, small streams and washes. Isolated significant flash floods possible.	Numerous flash flooding events with significant events possible. Many streams may flood, potentially affecting larger rivers.	Severe, widespread flash flooding. Areas that don't normally experience flash flooding, could. Lives and property in greater danger.
