Editor's Notes

The National Weather Service in Spokane would like to wish you a happy, safe and snowy holiday season! We appreciate all your reports, comments, and efforts, which in turn helps us serve you

We will be making a change to the newsletter distribution in Spring 2009. Since each newsletter issue is available online, we are going limit mailing paper copies. If you still want a paper copy mailed to you, please contact us and we will keep you on the mailing list.

For any questions or comments on the newsletter, you can reach Robin or Kerry at (509) 244-0110 extension 223 or email nws.spokane@ noaa.gov.

The main purpose of this publication is to keep our readers informed about our services and programs, and to recognize those who help us with our mission, including weather spotters, co-op observers, media, and emergency management.

All articles are written by the NWS staff. A special thanks to Ron Miller, Kerry Jones, Ellie Kelch, and Robert Bonner for their help with the included articles.

Staff News

Hydro-meteorological Technician, Verne Ballard will officially leave federal service when he retires on Jan 2, 2009. Verne has worked in the Spokane office since October 1995. Before moving to Spokane, he started with the National Weather Service at the Los Angeles office and worked there for almost twelve years.

The National Weather Service was not his only career. Verne retired from the U.S. Navy after 20 years of service. While in the Navy, he was stationed in Hawaii, Guam, southern California, Whidbey Island, and northern Illinois. He sailed to exotic Pacific islands and was one of the elite group of "typhoon trackers" of the western Pacific, where he rode planes through the heart of immense storms to take weather measurements.

Verne looks forward to leaving shift work and wants to spend more time fishing and gardening. He and his family plan to stay in Spokane. He will also help his wife start a bookkeeping home business. Good Luck Verne! ☼

Fall 2008 in Review

of the Inland Northwest, making it one of the best times briefly reached flood stage. of year in this area. Generally, temperatures were on the mild side with lots of sunshine.

the morning of the 1st were in the 30s and lower 40s in ally brought little in the way of precipitation. Between the northeast Washington and the northern Panhandle, including fronts, the weather was mild without much fog. As the 31° at Priest Lake and 28° at the Turnbull National Wildlife Thanksgiving holiday weekend approached, that pleasant Refuge near Cheney. Daytime temperatures gradually weather pattern changed. A cold front on Tuesday the 25th warmed back into the 70s and lower 80s. By the middle of brought just enough moisture to allow the Columbia Basin the month, the mercury had risen to the upper 80s and lower to sock in with fog and stratus. After a mostly gray Thanks-90s for a warm 5-day stretch. Lewiston recorded a high of giving, a weak Pacific weather system brought a couple of 96° on the 19th. A number of locations in southeast Wash- inches of snow on Friday the 28th to many locations north ington and the southern Panhandle set daily high tempera- and east of Spokane. But temperatures continued to warm ture records. But as is typical for these warm spells in au- and the fog and drizzle melted the snow as the month ended tumn, they usually precede a sharp cool-down. High temper- on a rather drippy note. atures on the 20th were markedly cooler, with most locations in the 60s and lower 70s, about 20° cooler than the previous Overall, the Fall of 2008 was mild and dry in the Inland day. The cold front responsible for this cool-down came up Northwest. Cold weather was hard to come by and many from Oregon and brought quite a bit of rain to the area, locations still hadn't seen any snowfall by early December. mainly over the Panhandle and extreme eastern Washington. In fact, Missoula, MT did not have any measurable snowfall 0.58". Temperatures remained on the cool side before warm- the past 54 years. 🜣 Ronald Miller ing to about 10° above normal by the end of the month.

This new warm spell lasted into early **October**. The 1st was the warmest day with widespread readings in the 80s and a few 90s. Colville, LaCrosse, and Lewiston all tied or set daily high temperature records. But that was the last of summer warmth as light rain moved in and temperatures gradually dropped each day. After reaching the 80s on the 1s most locations struggled to make it into the 50s on the 9th. Lewiston set record lows of 28° and 29° on the 11th and 12th. Nearby Pomeroy dropped all the way to 19° on the 12th. The remainder of the month featured some gorgeous fall weather. Chilly mornings gave way to sunny afternoons in the 50s and 60s. Rainfall was rather infrequent which resulted in a precipitation deficit for most sites in October.

November started off on a mission to make up for the relatively dry October. The first 12 days of November had rain (or snow) for most locations. Spokane had its first measurable snow of the season on the 6th, but it melted almost as quickly as it fell. Plain, WA picked up 2" while Boyds (northwest of Colville) and Malott (south of Omak) both received 1.5" of snow. This cold weather pattern was quickly replaced by a warm wet one as a "Pineapple Express" developed. Heavy rain fell in the Cascades and the Idaho Panhandle. Pullman received 1.57" of rain on the 12th. This not only set a record for the day, but it was also the 2nd wettest day ever for Pullman in November. Plain picked up an impressive 4.12" of rain in 24 hours. This was the wettest November day ever in Plain, breaking the old record of

eautiful autumn weather was experienced by residents 3.78" which was set only 2 years earlier. The Stehekin River

But this event also spelled the end of the wet weather for the remainder of the month. Weak Pacific fronts continued to September got off to a chilly start. Low temperatures on move through the Northwest every few days but they gener-

Lewiston picked up 0.67" of rain while Kellogg received in October or November, which has happened only twice in

November Frost and Fog in Deep Creek Canyon - Spokane #184

Long Range Outlook

he National Weather Service Climate Prediction Center I forecasts that the winter and spring for the Inland Northwest has equal chances of below normal, normal, and above normal weather conditions, including temperature and precipitation.

Remember your Winter Spotter Checklist

Snow:

2"+ valleys and 4"+ mountains

Strong Winds:

30 mph+ or damage

Reduced Visibility:

under a mile due to rain, dust, fog, snow, etc.

Any Flooding

Hail: pea size or larger

Heavy Rain:

Showery: 1/2" + in 1 hr Steady Rain: 1"+ in 12 hrs or 1.5"+ in 24 hrs

Any mixed precipitation

Travel Problems or **Any Damage:** due to severe or hazardous weather.

Go Green

The National Weather Service Spokane is promoting a *Go Green* campaign. Besides increasing our recycling efforts, we would also like to reduce the amount of unnecessary waste and cost.

One way is to limit the amount of printed and mailed newsletters. If you didn't already know, our newsletters are available on our web site http://www.weather.gov/spokane. We have been posting them on the Top News of our web page for years. You can find all past issues online as well.

So starting with the spring issue in March, we will STOP sending paper copies unless **you request a mailed newsletter**. We will be happy to send you a paper copy if you can not access an electronic copy. If you still would like a paper copy mailed to you, let us know by phone or email at nws.spokane@noaa.go. A Robin Fox & Kerry Jones

Online NWR Broadcasts

S treaming audio is available for many of the National Weather Radio (NWR) transmitters across the country, including the Spokane area. These streams are hosted by private companies, universities, media companies, and others, which are independent of the National Weather Service. This service allows you to listen to NWR through the internet on your computer.

Please remember, that you should NOT rely on the Internet audio to receive tone-alerted or EAS information on weather watches and warnings. Instead, you should have a dedicated NOAA Weather Radio receiver which will alert you 24 hours a day to hazards in your area. Go to http://www.nws.noaa.gov/nwr/streamaudio.htm for a list of the streaming audio sites. \$\times Robin Fox

Are You Prepared?

Before you start traveling...

- Pack your winter survival kit in your vehicle.
- Check the latest forecast, NWS or other source.
- Check the road conditions by dialing 511 on your phone, http://www.wsdot.wa.gov/traffic/ or http://511.idaho.gov/
- Let someone know where you are going.
