Storm Data and Unusual Weather Phenomena - March 2008

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<p>An upper level storm system moved from the northern and central Rocky mountains toward the southern plains early on the 2nd. Ahead of this system, a cold front moved toward northern Oklahoma. Moderate moisture increased across much of Oklahoma and temperatures were able to warm into the upper 60s and lower 70s. Several supercell thunderstorms developed along a dry line over western Oklahoma, with a line of thunderstorms also developing along the front. High winds, large hail, and very heavy rainfall accompanied the thunderstorms, with one tornado reported in Blaine county. The line of thunderstorms merged with the other thunderstorms and pushed into eastern and southern Oklahoma. Monetary damages were estimated.</p>

	03/06/08 12:00 CST		0	Winter Weather
	03/06/08 21:00 CST		0	
<hr/>				
<p>A rapidly developing storm system moved over the southern plains, with moderate to heavy snowfall occurring in southern and southeast Oklahoma. Although temperatures began the morning in the middle to upper 30s, temperatures quickly cooled into the lower 30s as moderate to heavy snowfall began. The storm system continued its intensification as it moved into eastern Oklahoma and western Arkansas, with the snowfall intensity also increasing. Snowfall totals of 4 to 8 inches were common over the southeast third of Oklahoma, with locally higher amounts of 10 inches. As expected with the heavy snowfall, traffic on area roadways was significantly slowed, with a few minor accidents. Monetary damages were estimated.</p>

	03/18/08 04:05 CST		0	Thunderstorm Wind (MG 54 kt)
	03/18/08 04:05 CST		0	Source: Mesonet
<p>An area of upper level low pressure entered the southwestern United States, with a powerful jet stream moving toward the southern plains. Thunderstorms developed in two waves, one occurred in the morning hours, with stronger thunderstorms developing in the afternoon. A surface low pressure center was located over the Texas panhandle, with a warm front extending southeast into northern parts of Texas. Warm, moist air was located south of this front. The warm front moved north into Oklahoma during the morning hours, with thunderstorms developing over a large part of western Oklahoma. A few thunderstorms briefly became severe during the morning hours as they moved north. Another more significant round of thunderstorms developed in the afternoon as the surface low moved east and a cold front moved through the state. Large hail and damaging winds were observed. The front moved into southeast Oklahoma by early evening, with heavy rainfall developing behind it.</p>

	03/31/08 00:39 CST		0.45M	Tornado (EF1, L: 3.50 mi , W: 100 yd)
	03/31/08 00:45 CST		0	Source: NWS Storm Survey
From the official National Weather Service damage survey, the tornado appeared to have developed near the intersection of NW 178th Street and Pennsylvania Avenue. The tornado caused most of its damage in the Valencia neighborhood. It was here that many homes sustained roof, window, garage door, and fence damage. One home sustained especially heavy damage, with a large portion of the roof being lost and extensive damage to the inside of the home. The tornado continued northeast and appeared to have dissipated just northeast of the subdivision, where some tree damage was noted. After a gap, additional damage was observed near the intersection of NW 192nd Street and Western Avenue, where several large power transmission poles were blown down, and some fence damage was also observed. While there was not a continuous damage path between the two damage sites, they do appear to be in line with the storm's path. A storm chaser also observed this tornado as far northeast as at least Covell Road between Santa Fe Avenue and Kelley Avenue where it is believed to have dissipated. Monetary damages were estimated.				
<hr/>				
LOGAN COUNTY --- GUTHRIE [35.88, -97.42]				
	03/31/08 01:00 CST		0	Hail (0.75 in)

LOGAN COUNTY --- GUTHRIE [35.88, -97.42]				
	03/31/08 01:45 CST		0.15M	Thunderstorm Wind (EG 61 kt)
	03/31/08 01:45 CST		0	Source: Newspaper
Wind damage - some significant - occurred over parts of Logan county. The metal roof and garage door of the Crosstown Veterinary Services building in Guthrie were destroyed. Three homes were damaged, with one of the homes sustaining significant damage southwest of Guthrie. Several outbuildings were damaged, as well as an empty barn. A mobile home was heavily damaged near the Coyle area. Numerous trees and power lines were downed by the strong winds as well. The time of occurrence and monetary damage estimates were estimated.				
<hr/>				
PAYNE COUNTY --- STILLWATER [36.12, -97.06]				
	03/31/08 02:00 CST		0	Hail (1.00 in)
	03/31/08 02:00 CST		0	Source: Emergency Manager
The hail was reported near McMurtry Road and Country Club on the northwest side of Stillwater. Nickel size hail was reported at 80th and Western Road on the south side of Stillwater, as well as near the intersection of Highways 51 and 51C.

<p>A powerful storm system moved toward the plains during the day on the 30th. A area of low pressure had developed over northwest Oklahoma. A dry line was located south of the low. Severe thunderstorms developed on the dry line in western Oklahoma by late afternoon. The supercell thunderstorms produced hail larger than baseballs in some areas, with thunderstorm wind gusts to 60 mph also reported. These thunderstorms bacame more intense as the moved northeast through the evening into central and northern Oklahoma. These thunderstorms produced very large hail, and eventually a few tornadoes. One brief tornado occurred near Albert, with other tornadoes affecting the northern parts of the Oklahoma metro area. One tornado in Oklahoma City produced fairly widespread damage, with several homes sustaining moderate damage. Wind damage to trees, power lines, and some structures was also reported in parts of Logan county. Monetary damages were estimated.</p>

<p>Another active day for severe weather occurred during the afternoon and early evening hours over Oklahoma on the 31st. A cold front moved from northwest to southeast, entering northwest Oklahoma during the morning hours, and moving into southeast Oklahoma by early to mid evening. Ahead of the cold front, deep Gulf moisture was in place, with afternoon heating warming temperatures into the 70s. Thunderstorms developed along and ahead of the front, with the strongest storms occurring over southern and southeast Oklahoma. The thunderstorms occurred two waves, one occurred during the late morning early afternoon hours, with another wave occurring during the mid to late afternoon hours. The first wave of thunderstorms was mainly a large hail threat, although a brief tornado did occur in Noble county. Very large hail was the main threat with the second threat, with strong winds and heavy rainfall another concern. The tornado in Noble county did some damage to a barn structure. The hail and strong winds also did some damage in the afternoon. Monetary damages estimated.</p>

<p>A cold front moved through southeast through Oklahoma during the day, with the front lying along the southeast third of Oklahoma by late afternoon. Thunderstorms developed over eastern Oklahoma first, and built southwest into parts of southeast Oklahoma. These thunderstorms briefly became severe before pushing out of the area by mid evening.</p>

<p>Cold air moved in behind a cold front that brought strong to severe thunderstorms the previous day over much of Oklahoma. A strong upper level storm system moved near the Red River during the day on the 3rd, with areas of snow developing near and north of the system. The progressiveness of the storm system limited snowfall totals, although brief periods of moderate to occasionally heavy snow accumulated to near five inches in some spots. However, the majority of the snowfall was between one and three inches. Strong north winds also briefly reduced visibilities.</p>

Storm Data and Unusual Weather Phenomena - March 2008

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A cold front swept through Oklahoma during the early morning hours, ushering in much colder air than what had been experienced the day before. North winds increased dramatically behind the front, with sustained speeds of 25 to 35 mph immediately behind the boundary. A few locations gusted over 40 mph, with one location briefly gusting near 60 mph. No damage was reported with the wind gust.

TEXAS, Western North

(TX-Z090) CLAY

03/06/08 10:00 CST	0	Winter Weather
03/06/08 15:00 CST	0	

A rapidly developing storm system moved over the southern plains, with moderate to heavy snowfall occurring over parts of Clay county. Snowfall began to fall at 1100 am and continued into the early parts of the afternoon. Up to three inches was reported over the southern parts of the county. Traffic on area roadways was slowed for a short time, but no accidents were reported. Monetary damages were estimated.

Isolated severe thunderstorms developed over parts of Oklahoma and western north Texas during the afternoon and evening hours of the 2nd. The majority of thunderstorm activity remained north of the Red River in Oklahoma, but a few thunderstorms developed farther south with high winds and hail. The storms pushed off to the north and east by early evening, with no damage reported.
