<hr/>				
<p>A dry line moved east into central Oklahoma during the afternoon before stalling just east of Interstate 35. Explosive thunderstorm development occurred east of the dry line over central Oklahoma by dinnertime. The thunderstorms almost immediately became severe as they moved toward the east and northeast. Hail larger than baseballs fell over southern sides of the Oklahoma City metropolitan area, with reports of large hail into Lincoln and Payne counties. Some damage was reported with the large hail, especially in the Midwest City area. A brief tornado was reported near southeast Oklahoma City, causing minor damage. Another tornado was reported in Payne county near Glencoe. The thunderstorms moved into eastern Oklahoma by mid-evening, but additional thunderstorms has already begun to develop over north-central Oklahoma. Monetary damages were estimated.</p>

<hr/>				
<p>An upper level storm system approached the southern Texas panhandle during the evening hours of the 6th. A dry line had set up near the Texas and New Mexico border, with widespread thunderstorms developing along it by late afternoon. These thunderstorms continued to develop eastward during the overnight hours, before making it into southwest Oklahoma near midnight. Damaging winds and heavy rainfall were reported with the thunderstorms as they moved east. Another threat came in the form of a heat burst, as some of the thunderstorms in Dewey and Jackson counties dissipated, leaving behind very strong winds.</p>

Storm Data and Unusual Weather Phenomena - May 2008

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<p>The tornado continued to move east-northeast from Canadian county. The tornado continued from the north side of Lake Overholser and crossed NW 39th street, damaging several bleachers next to the baseball field. Damage to trees was also noted at this location, with one tree falling on a gas plant. About 50 residents had to be evacuated due to the gas leak. An apartment complex was sustained some damage near NW 50th and Grove streets. Tree damage continued along the tornadoes path until it finally lifted near NW 60th and Meridian Avenue. One indirect injury was reported with the tornado. A Bethany woman broke her leg while she was running toward her storm shelter. No other injuries were reported. Monetary damages were estimated.</p>

LOGAN COUNTY --- GUTHRIE [35.88, -97.42], NAVINA [35.80, -97.56], MERIDIAN [35.84, -97.25], LANGSTON [35.94, -97.25]

	05/07/08 18:15 CST		0	Flash Flood (due to Heavy Rain)
	05/07/08 20:15 CST		0	Source: Emergency Manager

High water covered numerous streets in Guthrie due to persistent heavy rainfall throughout the day. Other roads were closed around the county due to high water. Byrd creek also overflowed its banks. No damages were reported.

A strong upper level low pressure system moved into southwest Oklahoma, and continued moving east throughout the day. Extremely strong lift ahead of the storm system and abundant moisture allowed for widespread showers and thunderstorms to develop over much of Oklahoma. The better chances for severe convection was located along and south of a stationary boundary that setup near Interstate 44. Severe thunderstorms developed during the afternoon hours south of the boundary, with large hail, flash flooding, and tornadoes reported. Several tornadoes were reported in the Oklahoma City metro area during the evening rush hour, with damage reported from Yukon through the northern portion of the city. Other tornadoes were reported south of the city, with damage also reported in this area. The slow movement of the precipitation quickly added up, with widespread amounts of at least two to four inches of rainfall. Flash flooding became a concern as the afternoon progressed, with several reports around central Oklahoma of roads being closed. The upper level storm system moved east during the evening, with the precipitation moving east as well. Monetary damages

Storm Data and Unusual Weather Phenomena - May 2008

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
ATOKA COUNTY --- 3.0 NE DAISY [34.57, -95.70], 4.5 ENE DAISY [34.56, -95.67]				
	05/10/08 17:05 CST		75K	Tornado (EF2, L: 1.60 mi , W: 100 yd)
	05/10/08 17:10 CST		0	Source: NWS Storm Survey
<p>The tornado continued into Pushmataha county before lifting 2.75 miles WSW of Adel. In Atoka County, three houses were damaged. The roof was removed and some of the exterior walls on one well-built home were collapsed. Numerous trees were uprooted or snapped above the ground. Monetary damage were estimated.</p>				
<p>A powerful storm system strengthened over the central Plains during the day on Saturday, drawing rich gulf moisture north into eastern Oklahoma. A surface low pressure developed with a trailing cold front that moved quickly through western Oklahoma, and a dry line extending to the east of the cold front. Isolated severe thunderstorms developed near Hughes county early in the afternoon, with large hail reported in a few locations. Later in the afternoon, supercells over eastern Oklahoma expanded southwest. One supercell developed over far eastern Atoka county, producing a tornado near Daisy and large hail. Damage was reported with the tornado, but there were no injuries. Monetary damages were estimated.</p>

<p>Large quantities of golf ball size hail covered the ground.</p>				
<p>A dry line set up over the eastern panhandles during the afternoon, with dew point temperatures in the middle to upper 60s east of the boundary. Afternoon heating and lift from an upper level disturbance allowed for thunderstorms to develop east of the dry line. The thunderstorms moved into western and northwestern Oklahoma by the afternoon, mainly north of Interstate 40. Supercell thunderstorms dropped very large hail as they moved northeast toward the Kansas border. Another cluster of thunderstorms moved northeast toward parts of central and northern Oklahoma. Large hail up to golf ball size, damaging winds near 70 mph, and very heavy rainfall were reported with the complex. Damage to trees and power lines was reported as the thunderstorms passed. The thunderstorms finally moved into Kansas during the late night hours. Monetary damages were estimated.</p>

	05/23/08 19:03 CST		0	Tornado (EF3, L: 5.00 mi , W: 1100 yd)
	05/23/08 19:15 CST		0	Source: NWS Storm Survey
<p>A strong tornado, rated EF3 at its peak intensity, struck south-southwest of the Selman area, producing widespread damage along its path. The tornado touched down, doing minor damage to trees and outbuildings. The tornado continued moving northeast and struck a residence. Significant damage consistent with EF2 damage was seen at this location. More significant damage was done to a residence and stocked workshop building as the tornado moved northeast. This was the strongest point of the tornado, rated EF3. A semi-cab and a 20-horse trailer were blown 50 yards from inside of the workshop. They both sustained significant damage. The tornado moved north from this point, doing EF2 damage to a building and workshop. The owners of the home took shelter in their storm shelter during the tornado, but became trapped inside by debris over top of the door. They were freed by local firemen after approximately 45 minutes. The tornado continued north and then northwest as it began to dissipate. Before it dissipated, however, a heavy fiberglass water tank that was filled with water was destroyed and moved some distance away. Two horses were also killed and one was seriously injured by swirling tin and other sharp debris. Monetary damages were estimated.</p>				
HARPER COUNTY --- 8.0 SE SELMAN [36.72, -99.39]				
	05/23/08 19:03 CST		0	Hail (1.50 in)
	05/23/08 19:03 CST		0	Source: Amateur Radio

<hr/>				
The hail was reported near the Woodward and Dewey county line.				
<p>Thunderstorms developed during the afternoon ahead of a dry line that was located near the Texas panhandle and Oklahoma border. The thunderstorms quickly became supercells as they moved toward southwest Kansas. Very large hail was the initial threat, although a significant tornado threat became apparent as they neared the Kansas border. Three tornadoes were reported with the thunderstorms, with two of them doing significant damage. The tornadic thunderstorms moved northeast by nightfall, with other less severe thunderstorms developing farther south. Monetary damages were estimated.</p>

Storm Data and Unusual Weather Phenomena - May 2008

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<p>Per spotter reports and damage survey, this tornado was a large multi-vortex tornado initially moving southeast, doing damage at inconsistent points along the entire width. However, the tornado did at times form a very wide single vortex which did consistent damage across the entire width. At two points in the path, there were several snapped/downed power poles with a width of ~0.5-0.6 miles. However, at one of those points two outbuildings were destroyed and significant tree damage occurred, yet the house on the property sustained no visible damage. Significant damage occurred across the entire width starting at Highway 74 going east possibly signaling a change from multiple vortices to a single vortex. At Highway 74 and Bison Rd., a single wide mobile home that was anchored down was thrown onto Highway 74. The tornado tracked east along Bison Rd, destroying outbuildings and a false roof at one property. A horse trailer at the property was thrown about 300 yards. Significant tree damage and snapped power poles occurred along Bison Rd. Monetary damages were not available.</p>				

GARFIELD COUNTY --- 1.0 E DOUGLAS [36.26, -97.65]				
	05/24/08 15:45 CST		0	Hail (2.75 in)
	05/24/08 15:45 CST		0	Source: Emergency Manager

GARFIELD COUNTY --- 2.0 E DOUGLAS [36.26, -97.63]				
	05/24/08 15:58 CST		0	Hail (1.00 in)

	05/24/08 20:19 CST		0	Hail (1.25 in)
	05/24/08 20:19 CST		0	Source: Trained Spotter
The report was relayed by the Garfield county emergency manager.				
<p>An outflow boundary from overnight thunderstorms was located over parts of northern Oklahoma, roughly from southern Alfalfa county to northern Lincoln county. Convergence along this boundary and afternoon heating allowed thunderstorms to develop during the mid afternoon near and north of the outflow boundary. The most intense thunderstorms developed along the boundary, with less intense thunderstorms just to the north. The supercell thunderstorms that developed along the boundary moved very slowly east. Numerous tornadoes, at least eight in all, were reported with the thunderstorms. Some damage was reported with the tornadoes, although most remained unpopulated areas. The supercells moved east, with other thunderstorms back-building to the west. Large hail eventually became the main threat through the evening hours. Monetary damages were estimated.</p>

<p>During the morning hours of the 26th, a cold front moved into southwest Kansas, with a dry line extending south of the front into the eastern Texas panhandle. An outflow boundary was located from central Kansas, south into north-central and northeastern Oklahoma. Thunderstorms developed over the Texas panhandle during the afternoon east of the dry line and moved east into western Oklahoma. Other thunderstorms developed along and north of the outflow boundary in north-central Oklahoma. Thunderstorms became more widespread by evening, as the cold front continued moving southeast. Large hail from golf ball to even softball size, damaging winds to 70 mph, and flooding rains were reported with the severe thunderstorms. Some wind damage was also reported, but there were no injuries. The thunderstorms persisted well into the overnight hours. The thunderstorms finally moved east during the mid-morning hours of the 17th, but left behind several boundaries that helped with severe thunderstorms later in the afternoon. Monetary damages were estimated.</p>

Several outflow boundaries were located over western and southwest Oklahoma. Strong instability developed near these boundaries by mid to late afternoon, with widespread showers and thunderstorms developing. Several thunderstorms became severe, but moved little through the early evening due to weak upper level winds. Jackson county seemed to take the worst of the thunderstorms, with several rounds of hail and strong winds reported. The slow movement of the thunderstorms and very heavy rain also caused some water problems on area roadways, with several closed for a couple of hours. The thunderstorms finally weakened and moved off to the south by the evening hours. Monetary damages were estimated.

A weak cold front moved into northern Oklahoma during the early morning, and stalled. Thunderstorms developed first over south-central Kansas, and built south along the front through the late afternoon and early evening hours. An isolated, but more significant supercell thunderstorm formed before midnight over parts of central Oklahoma, dropping hail up to baseball size as it moved southeast. Additional thunderstorms developed behind the front and moved southeast through the overnight hours of June 1st, with additional reports of hail and high winds.

TEXAS, Western North

ARCHER COUNTY --- MANKINS [33.78, -98.80]				
	05/07/08 15:09 CST		0	Thunderstorm Wind (MG 50 kt)

	05/07/08 16:00 CST		0	Source: Emergency Manager

An eight to ten foot cottonwood was snapped about half-way up due to strong winds. Monetary damages were estimated.

A strong upper level storm system moved along the Red River in southwest into southern Oklahoma. Widespread showers and thunderstorms developed during the day, with a few becoming severe during the late afternoon hours. High winds and heavy rain were reported. A large tree was damaged in Clay county, but no other damage was reported. Monetary damages were estimated.

ARCHER COUNTY --- SCOTLAND [33.66, -98.47]				
	05/13/08 18:44 CST		0	Hail (1.75 in)
	05/13/08 18:44 CST		0	Source: COOP Observer

Very moist air overspread much of northern Texas as a warm front moved north into Oklahoma. An upper level disturbance moved through southern Kansas during the day, with a cold front moving into western Oklahoma by mid afternoon. Thunderstorms developed and eventually moved into western North Texas. One thunderstorm became severe, producing large hail. No damage was reported.

KNOX COUNTY --- 3.0 W TRUSCOTT [33.75, -99.86]				
	05/24/08 19:30 CST		0	Hail (0.88 in)

	05/24/08 21:47 CST		0	Source: Amateur Radio

Hail from pea to quarter size was reported.

Strong to severe thunderstorms developed during the afternoon and moved east into northern Texas. The thunderstorms congealed into a line as they moved east, with large hail reported in Knox and Wichita counties. No damage was reported.

FOARD COUNTY --- THALIA [33.98, -99.54]				
	05/27/08 18:05 CST		0	Hail (0.88 in)
	05/27/08 18:05 CST		0	Source: Law Enforcement

Thunderstorms developed near and along several boundaries that were left over from previous nights convection. A few of the thunderstorms became severe, although they moved over mainly rural areas of western north Texas. A brief period of nickel-size hail was reported with the storm in Foard county, but no damage was reported.
