

Storm Data and Unusual Weather Phenomena - May 2010

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
OKLAHOMA, Western, Central and Southeast				
GARFIELD COUNTY --- ENID [36.40, -97.88]				
	05/09/10 16:15 CST		0	Hail (0.88 in)
	05/09/10 16:15 CST		0	Source: Emergency Manager
The hail was reported on the west side of Enid.				
GRADY COUNTY --- VERDEN [35.08, -98.09]				
	05/09/10 16:47 CST		0	Hail (1.00 in)
	05/09/10 16:47 CST		0	Source: Emergency Manager
KAY COUNTY --- KILDARE [36.81, -97.05]				
	05/09/10 17:20 CST		0	Hail (1.00 in)
	05/09/10 17:20 CST		0	Source: Public
Thunderstorms developed in the afternoon over parts of central and northern Oklahoma, with the strongest storms briefly producing some quarter sized hail. No damage was reported with the hail.				
WOODS COUNTY --- ALVA [36.80, -98.67]				
	05/10/10 13:45 CST		0	Hail (1.50 in)
	05/10/10 13:45 CST		0	Source: Public
The hail was reported on the northwest side of town.				
ALFALFA COUNTY --- LAMBERT [36.68, -98.42]				
	05/10/10 14:03 CST		0	Hail (1.75 in)
	05/10/10 14:03 CST		0	Source: Trained Spotter
ALFALFA COUNTY --- CHEROKEE [36.75, -98.35]				
	05/10/10 14:10 CST		0	Hail (4.25 in)
	05/10/10 14:10 CST		0	Source: Storm Chaser
The hail broke numerous winds at several businesses. The report was relayed by NWS Tulsa.				
GRANT COUNTY --- 6.4 S MANCHESTER [36.90, -98.06]				
	05/10/10 14:25 CST		0	Hail (1.75 in)
	05/10/10 14:35 CST		0	Source: Trained Spotter
GRANT COUNTY --- WAKITA [36.88, -97.92]				
	05/10/10 14:30 CST		0	Hail (2.75 in)
	05/10/10 14:45 CST		0	Source: Public
GRANT COUNTY --- 8.5 N NASH [36.79, -98.06]				
	05/10/10 14:33 CST		0	Tornado (EF0, L: 0.50 mi , W: 20 yd)
	05/10/10 14:33 CST		0	Source: Storm Chaser
Tornado #A1. A brief tornado was observed southwest of SH-132 and SH-11 by several storm chasers. No known damage occurred.				
GRANT COUNTY --- 7.9 SW WAKITA [36.81, -98.03], 10.6 NNE DEER CREEK [36.96, -97.46]				
	05/10/10 14:38 CST		0	Tornado (EF3, L: 33.00 mi , W: 1500 yd)
	05/10/10 15:19 CST	1	0	Source: NWS Storm Survey

This is the Grant County portion of tornado #A2. This tornado developed as a multiple-vortex tornado along State Highway 11 southwest of Wakita. The tornado initially moved east and southeast continuing to affect State Highway 11 before beginning an east-northeast movement across Grant County. The tornado was a large and occasionally multiple-vortex tornado as it moved northwest and north of Medford and was embedded within a larger scale circulation that was strong enough to produce damage along a wide area around the tornado path. The tornado caused significant structural damage about 5 miles northwest of Medford and 5 miles east of Renfrow, and many areas of tree and power pole damage. This tornado moved into Kay County.

Storm Data and Unusual Weather Phenomena - May 2010

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
Tornado #A5. Another tornado developed and moved a few minutes ahead of tornado #A2 and a couple of miles to the south. The tornado caused significant tree damage along the entire path. Just west of Interstate 35, a house suffered significant roof damage, although it was somewhat protected by a number of large trees just west of the house. Two semi trucks was blown over as this tornado crossed Interstate 35 two miles south of the Kansas state line.				

KAY COUNTY --- 7.7 WNW BRAMAN [36.96, -97.46], 5.6 N BRAMAN [37.00, -97.34]

05/10/10 15:19 CST	0	Tornado (EF3, L: 7.00 mi , W: 1500 yd)
05/10/10 15:30 CST	1	Source: NWS Storm Survey

This is the Kay County portion of tornado #A2. The tornado crossed into Kay County from Grant County and continued to produce significant damage. One home was destroyed and another significantly damaged between the Grant County line and U.S. Highway 177. After the tornado crossed US-177, an anchored mobile home was destroyed and blown to the east, and a tri-level home was destroyed with the top floor blown about 50 yards northeast into some trees, and the ground floor pivoted and was displaced to the northwest exposing the basement where one minor injury occurred. The tornado continued to produce significant tree damage as it moved east-northeast, and blew semi trucks over along Interstate 35 at the Kansas state line. This tornado crossed into Sumner County Kansas. See documentation from the NWS Wichita KS for additional information.

KAY COUNTY --- 6.2 N NARDIN [36.90, -97.45], 6.0 W BRAMAN [36.90, -97.44]

05/10/10 15:21 CST	0	Tornado (EF0, L: 0.75 mi , W: 50 yd)
05/10/10 15:22 CST	0	Source: NWS Storm Survey

Tornado #A6. An anticyclonic tornado snapped a power pole and damaged trees as it moved east-northeast.

KAY COUNTY --- 7.4 WNW BRAMAN [36.94, -97.46], 6.6 WNW BRAMAN [36.95, -97.44]

05/10/10 15:22 CST	0	Tornado (EF1, L: 1.00 mi , W: 500 yd)
05/10/10 15:23 CST	0	Source: NWS Storm Survey

Kay County portion of tornado #A4. This tornado moved into Kay County from Grant County and continued to produce tree damage before dissipating about one mile inside Kay County.

NOBLE COUNTY --- 8.0 E BILLINGS [36.53, -97.30]

05/10/10 15:30 CST	0	Hail (2.75 in)
05/10/10 15:30 CST	0	Source: Trained Spotter

GRADY COUNTY --- 1.0 N MINCO [35.32, -97.94]

05/10/10 15:39 CST	0	Hail (1.50 in)
05/10/10 15:39 CST	0	Source: Trained Spotter

GRADY COUNTY --- MINCO [35.31, -97.94]

05/10/10 15:39 CST	0	Hail (1.75 in)
05/10/10 15:40 CST	0	Source: Trained Spotter

CANADIAN COUNTY --- 3.0 ESE UNION CITY [35.37, -97.89]

05/10/10 15:40 CST	0	Hail (1.00 in)
05/10/10 15:40 CST	0	Source: Trained Spotter

CANADIAN COUNTY --- 3.8 NNE UNION CITY [35.44, -97.91], 6.2 ESE EL RENO [35.48, -97.86]

05/10/10 15:46 CST	0	Tornado (EF0, L: 4.00 mi , W: 40 yd)
05/10/10 15:52 CST	0	Source: Broadcast Media

Tornado #C1. A tornado was observed and photographed by broadcast media and numerous citizens southwest of Yukon. No damage was reported and the path was estimated.

CANADIAN COUNTY --- 5.7 N PIEDMONT [35.72, -97.75]

05/10/10 15:46 CST	0	Tornado (EF0, L: 0.20 mi , W: 30 yd)
05/10/10 15:46 CST	0	Source: NWS Storm Survey

Canadian County portion of tornado #H1. An outbuilding was significantly damaged just south of the Kingfisher County line and east of Piedmont Road. The storm then moved into Kingfisher County.

KINGFISHER COUNTY --- 6.2 SW CASHION [35.73, -97.74], 0.4 SE CASHION [35.80, -97.67]

Storm Data and Unusual Weather Phenomena - May 2010

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	05/10/10 15:46 CST		0	Tornado (EF0, L: 6.20 mi , W: 30 yd)
	05/10/10 15:54 CST		0	Source: NWS Storm Survey

Kingfisher County portion of Tornado #H1. This tornado moved into Kingfisher County from Canadian County and moved northeast damaging outbuildings, trees and power lines across the southeastern portion of Kingfisher County. The tornado moved into Logan County just southeast of Cashion.

NOBLE COUNTY --- 1.4 NNE RED ROCK [36.48, -97.17], 1.8 NNE RED ROCK [36.48, -97.16]				
	05/10/10 15:53 CST		0	Tornado (EF0, L: 0.50 mi , W: 20 yd)
	05/10/10 15:54 CST		0	Source: Storm Chaser

Tornado #B1. Storm chasers reported a brief tornado north-northeast of Red Rock. No damage was reported and the location is estimated.

LOGAN COUNTY --- 6.1 W NAVINA [35.80, -97.67]				
	05/10/10 15:54 CST		0	Tornado (EF0, L: 0.50 mi , W: 30 yd)

	05/10/10 16:20 CST		0	Tornado (EF3, L: 13.00 mi , W: 2000 yd)
	05/10/10 16:35 CST	20	0	Source: NWS Storm Survey
This tornado is labeled I1. This long-tracked and devastating tornado developed west of I-35, northwest of Max Westheimer airport. Widespread tree, power line/pole damage was reported from near I-35 to the east side of Stanley Draper Lake. Several homes also sustained damage, mainly with mostly roofs receiving significant damage, and some siding was ripped off. Several fences were also knocked down as the tornado moved northeast. From the east side of Lake Stanley Draper, near Hiwassee Road and SE 89th Street, to just south of Harrah, the damage path became more severe and focused. The tree damage became more severe, breaking at various heights of the tree or being uprooted. Walls of homes collapsed, and debris from the homes scattered in all directions. Several 2x4's punctured roofs and ceilings over numerous structures. A few mobile homes in this area were also completely destroyed. Where the tornado crossed I-40, a gas station and drive-in restaurant sustained up to EF3 damage. The most severe damage, one of the two EF4 tornadoes of the day, occurred in the Deerfield West Subdivision. A well-built residence here was completely destroyed, with most exterior and interior walls collapsing. The tornado finally lifted 2 miles south of Harrah. In addition to the incredible damage, one person lost their life while trying to flee the tornado.				
PAYNE COUNTY --- 10.9 SSW LAKE CARL BLACKWELL DAM [35.99, -97.23]				
	05/10/10 16:20 CST		0	Hail (1.75 in)
	05/10/10 16:35 CST		0	Source: Emergency Manager
The hail was reported near 116th Street and Coyle Road.				
STEPHENS COUNTY --- 2.8 NE BRAY [34.66, -97.78], 5.2 ENE BRAY [34.68, -97.74]				
	05/10/10 16:20 CST		0	Tornado (EF1, L: 2.50 mi , W: 700 yd)
	05/10/10 16:22 CST		0	Source: NWS Storm Survey
The anticyclonic tornado moved from northeast Stephens County into southeast Grady County. Damage was reported to fences, trees, and around 20 power poles, and several structures were damaged. Minor damage to mobile homes was also reported. Monetary damages were estimated. This tornado is labeled #G1.				

Storm Data and Unusual Weather Phenomena - May 2010

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
CLEVELAND COUNTY --- 2.0 SSE MOORE [35.31, -97.48], 3.0 ENE MOORE [35.35, -97.44]				
	05/10/10 16:22 CST		0	Tornado (EF1, L: 3.75 mi , W: 250 yd)
	05/10/10 16:27 CST		0	Source: NWS Storm Survey
Tornado #12. Power poles and a house were damaged near and just east of Broadway Street and Eastern Avenue in the southern portion of Moore. As the tornado moved northeast, most of the roof was removed from a mobile home and trees were damaged west of Sunnyslane Road north of NE 12th Street, and shingle damage occurred on a house just east of Sunnyslane Road.

Storm Data and Unusual Weather Phenomena - May 2010

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<p>This tornado is labeled #J1, and moved into Pottawatomie County near state highway 9. The tornado a few hundred yards east of the National Weather Center in Norman, Oklahoma. The damage intensity increased gradually along the path with significant damage beginning as the tornado approached Lake Thunderbird. This tornado crossed Lake Thunderbird, severely damaging two campgrounds and the marina where about 300 boats were docked. The most severe damage occurred from the Little Axe School to the Cleveland/Pottawatomie county line. Trees were stripped of some bark and branches. Large objects were thrown considerable distances, including some concrete pillars. The metal bleachers near the school were tossed or rolled several hundred yards. Some appliances were also lofted as a dryer was found about 50 feet up in a tree. Considerable structural damage also occurred, as some foundation homes were mostly destroyed. In addition to the damage, one person lost their life as a result of the tornado.</p>

<p>Tornado #J2. This anticyclonic tornado developed in the southern portion of Norman south of State Highway 9 near Chautauqua Avenue and to the southwest of tornado #J1. The tornado moved east-northeast causing roof, tree and fence damage to neighborhoods along Cedar Lane, especially after crossing U.S. Highway 77. The tornado continued to produce tree damage as it moved east and east-northeast. It crossed State Highway 9 to the east of SE 48th Avenue and moved into a neighborhood to the northwest of SE 60th Avenue and Highway 9 a few minutes after tornado #J1 had caused damage in this same neighborhood. The tornado dissipated near SE 60th Avenue.</p>

<p>This tornado is a continuation of the tornado that began in Cleveland County, labeled #I1. This long-tracked and devastating tornado developed west of I-35, northwest of Max Westheimer airport. Widespread tree, power line/pole damage was reported from near I-35 to the east side of Stanley Draper Lake. Several homes also sustained damage, mainly with mostly roofs receiving significant damage, and some siding was ripped off. Several fences were also knocked down as the tornado moved northeast. From the east side of Lake Stanley Draper, near Hiwassee Road and SE 89th Street, to just south of Harrah, the damage path became more severe and focused. The tree damage became more severe, breaking at various heights of the tree or being uprooted. Walls of homes collapsed, and debris from the homes scattered in all directions. Several 2x4's punctured roofs and ceilings over numerous structures. A few mobile homes in this area were also completely destroyed. Where the tornado crossed I-40, a gas station and drive-in restaurant sustained up to EF3 damage. The most severe damage, one of the two EF4 tornadoes of the day, occurred in the Deerfield West Subdivision. A well-built residence here was completely destroyed, with most exterior and interior walls collapsing. The tornado finally lifted 2 miles south of Harrah. In addition to the incredible damage, two people lost their lives as a result of the tornado.</p>

This tornado is labeled #L1. The tornado developed near the junction of Walker and Ingram Roads, causing major damage to home and damaging several trees. The tornado crossed to the east side of the lake, downing high tension power lines and another residence. The tornado grew to its widest near Highway 102. Another home, a mobile home, and barn were severely damaged just east of the highway. Metal poles that were embedded in concrete at the barn were ripped out of the ground with the concrete still attached. A 80,000 pound box car was rolled about 300 yards. A few trees that were damaged were debarked. The tornado lifted south of Interstate 40.

This tornado lasted for at least 30 miles and continued into Seminole and Okfuskee counties, with significant damage along almost its entire path. At times, the tornado damage path widened up to a mile. The most significant damage was located north and northeast of Earlsboro near the Pottawatomie/Seminole county border. Here a two story home was destroyed except for a few interior walls. A pick-up truck was also lofted approximately a quarter of a mile, and a semi-trailer was lofted or rolled approximately 200 yards. Farther east along its path, seven high tension towers were downed. Significant tree damage was reported along the entire track of the tornado, some of them debarked and stripped off all their branches. This tornado is labeled #J4.				
This tornado moved into Seminole County.				
JEFFERSON COUNTY --- 5.3 WSW GRADY [33.98, -97.75]				
	05/10/10 17:00 CST		0	Hail (2.00 in)

BRYAN COUNTY --- 2.0 SW COLBERT [33.84, -96.52]	05/10/10 20:11 CST	0		Thunderstorm Wind (EG 52 kt)
	05/10/10 20:11 CST	0		Source: Emergency Manager

No damage was reported with the wind gust.

A significant outbreak of severe thunderstorms and tornadoes affected a large part of northern, central, and southern Oklahoma. Tornadoes were most numerous across central and southern Oklahoma, with significant damage occurring over many areas. Severe thunderstorms erupted by mid afternoon across northern and western Oklahoma. Given the potent combination of ingredients in place, storms began to produce tornadoes quickly after initiation. Storm motions of 50 to 60 mph were common.

During the mid afternoon hours, severe weather was confined to northern Oklahoma. It was there a long track supercell storm produced tornadoes near the Kansas border - including one rated EF3 - from near Wakita to north of Braman.

The capping inversion that had delayed thunderstorm development into central Oklahoma weakened, allowing for explosive supercell development along the dry line along and west of the Interstate 35 corridor. Rapid development and intensification was common with the late afternoon storms, with storms becoming tornadic within a very short time after initiation. This round of storms would directly impact a large part of the Oklahoma City metro area at rush hour, and posed a significant threat to the area. The first tornado in this area occurred in Canadian County.

During the next several hours, tornadoes were clustered around the metro area, and at times there were multiple significant damaging tornadoes occurring simultaneously. Several of the tornadoes had long tracks. Damage from the tornadoes was substantial, with numerous structures, vehicles, trees and power poles/lines significantly damaged or destroyed. One of the more intense tornadoes moved across Lake Thunderbird east of Norman destroying numerous boats.

More storms developed across southwest and south central Oklahoma, and also quickly became tornadic.

By 9 pm, 35 tornadoes had been reported. While the loss of three lives was tragic, the casualties could have been much higher given the storm's fast motions, their intensity, the time of day and the areas impacted.

While exact monetary damage figures were not available, it is estimated that losses were in excess of \$595 million. At least 450 sustained injuries, most of them minor. Unfortunately three people lost their lives.

Note: The large number of injuries and tornadoes made it difficult to associate injuries with specific tornadoes. Injury numbers were included when we had confidence in the numbers.

Note: The complex nature of storm evolutions and interactions made the job of classifying tornadoes difficult. This represents our best scientific assessment based on ground and aerial surveys, data from multiple radars, photographic and video evidence and anecdotal information.

WOODWARD COUNTY --- 4.0 SE WOODWARD [36.39, -99.34]				
	05/11/10 20:10 CST		0	Hail (2.00 in)
	05/11/10 20:10 CST		0	Source: Trained Spotter
A cold front stalled from around I-44 during the late night/early morning hours of the 11th, but began to lift back toward the northwest as an upper trough moved toward the central/southern Plains. Rich gulf moisture overspread the area near and south of the warm front, and the atmosphere was very unstable. A strong cap was in place over the region, but a mid level disturbance moved over Oklahoma, weakening the cap and providing sufficient convergence along the retreating warm for Thunderstorms developed over western and northwest Oklahoma and quickly became severe producing large hail. Hail reached baseball-size in Woodward county. A brief tornado was reported north of Sharon. No damage was reported with the hail or tornado.				
WOODWARD COUNTY --- 6.0 N MOORELAND [36.53, -99.21]

Thunderstorms developed by mid afternoon in northwest Oklahoma near a warm front. A long-lived supercell became organized over Major County and moved southeast, leaving a swath of large damaging hail in its wake.

Baseball size hail was reported west of Fairview, with softball size hail west of Okeene. As the storm moved southeast, the coverage of hail increased, with numerous reports of golfball size - and a few baseball size - hail from near Kingfisher to northwest Oklahoma City. The storm continued southeast through Oklahoma City, causing extensive damage.

Damage was widespread and significant in and around the Oklahoma City metro area. Numerous vehicles were heavily damaged or even totaled by the large amounts of damaging hail. Numerous buildings suffered roof, window and structural damage, and trees and

vegetation were shredded by the large hail. Hail drifts reached several feet deep over some areas, and a few locations reported hail still on the ground more than 12 hours later.

As the storm continued southeast, it continued to produce hail near golf ball size through parts of Seminole, Hughes, and Atoka counties.

While exact damage figures were not available, estimates place the monetary losses in excess of \$500 million.

At least golf ball-size hail near 164th Street and Meridian Avenue. Photo courtesy of Ty Judd.

ELLIS COUNTY --- 16.9 S ARNETT [35.90, -99.76]

Storm Data and Unusual Weather Phenomena - May 2010

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A large storm system moved through the southern and central Plains during the morning and afternoon of the 19th. Thunderstorms, some of them severe, had developed over the Texas panhandle and moved east into northwest and north central Oklahoma during the early morning hours. Additional development, aided by the low-level jet, occurred into parts of central Oklahoma, north of a warm front that was slowly moving north to near Interstate 40.

By mid afternoon, the well-defined front was located from parts of west-central into central Oklahoma, just north of the Oklahoma City metro area. Two thunderstorms developed near and along the front, one over Roger Mills and Dewey counties, and the other over northern Blaine county. The storms quickly became tornadic, with the first tornado of the day occurring north of Leedey in Dewey county. Another tornado, and probably the most photographed one of the day, occurred just north of Hennessey. Tornadoes, most of them brief in duration, and large hail continued across western and central Kingfisher county, and across northern Logan, southeast Garfield, and Payne counties. Another thunderstorm developed further east along the dry line later in the afternoon, and the storm eventually produced a tornado west of Prague in Lincoln county.

Finally, two supercell thunderstorms developed further south along the dry line that moved into central Oklahoma. Although both showed significant rotation on radar, only the supercell that moved from Stephens through Murray counties produced tornadoes. Two tornadoes were reported, one just southeast of Wynnewood and another north of Sulphur.

Additional severe thunderstorms developed across southern Oklahoma, but the main impacts had shifted from tornadoes to large hail and very heavy rainfall. By the time it was all said and done, five main supercells had occurred over parts of western and central Oklahoma, producing at least nine tornadoes. Widespread significant damage did not occur due to the location/short duration of the tornadoes, and only three minor injuries were reported.

ELLIS COUNTY --- 1.0 SW GAGE [36.31, -99.77]

ROGER MILLS COUNTY --- 0.6 W CHEYENNE [35.61, -99.68], 5.6 WNW DEMPSEY [35.54, -99.91], 1.0 N SWEETWATER [35.44, -99.91], 2.0 NW BERLIN [35.47, -99.66]	05/25/10 04:00 CST		0	Flash Flood (due to Heavy Rain)
	05/25/10 06:00 CST		0	Source: Emergency Manager
<hr/>				
Two county roads were closed between Cheyenne and Sweetwater due to very heavy rainfall. Widespread rainfall totals mostly ranged from three to four inches, with isolated totals near five inches.				
Thunderstorms developed along the dry line in the Texas panhandle and eventually made their way into western and northwest Oklahoma. Severe wind gusts and large hail were reported at several locations. A brief tornado was reported near Tangier in Woodward county. No damage was reported. Heavy rain over Roger Mills county resulted in the closing of a few county roads.

Storm Data and Unusual Weather Phenomena - May 2010

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
CLAY COUNTY --- HENRIETTA [33.82, -98.19]				
	05/13/10 01:40 CST		0	Thunderstorm Wind (EG 61 kt)
	05/13/10 01:40 CST		0	Source: Emergency Manager

Minor roof and siding damage was reported to several buildings on the west side of town, with several tree limbs downed as well. A metal garage door was also blown in at an auto parts store. Monetary damages were not available.

A line of thunderstorms developed along a cold front that swept through the region during the early morning hours of the 13th. Storms also developed ahead of a dry line in the eastern Texas panhandle. Very strong winds and marginally severe hail accompanied the line of thunderstorms. The winds produced damage, especially over Wichita and Clay counties.

KNOX COUNTY --- MUNDAY [33.45, -99.63]				
	05/13/10 19:34 CST		0	Hail (1.00 in)
	05/13/10 19:34 CST		0	Source: Law Enforcement

The hail was reported on the northwest side of town.

CLAY COUNTY --- VASHTI [33.56, -98.04]				
	05/13/10 23:50 CST		0	Hail (1.75 in)
	05/13/10 23:50 CST		0	Source: Emergency Manager

Thunderstorms developed along and north of stalled front, and a few storms briefly reached severe levels and produced some large hail.
