No damage was reported.

A large upper trough developed over the western U.S. with upper level winds supportive of severe storms. At the surface, a cold front and dryline surged into western Oklahoma during the late afternoon and evening hours on the 10th. Despite very favorable wind fields and forcing for severe storms, lack of quality moisture kept most storms below severe levels. A couple of storms, however, managed to become severe and produce large hail and damaging wind gusts.
