Damage was observed in high-resolution satellite imagery from a large tornado that occurred in areas of the southern Arbuckle Mountains inaccessible to ground survey teams. The large tornado developed on the southern slopes of the Arbuckle Mountains and was observed by many storm spotters and storm chasers as it moved northeast into the Arbuckles. The satellite imagery indicated a clear path of tree damage that moved intermittently northeast and east-northeast with the most significant and widest area of tree damage along a tree line along Cool Creek where numerous large trees were toppled along a 600 yard wide path. The tornado crossed into Murray County south-southwest of Dougherty.

The Madill tornado initially developed near State Highway 99C and west of Breezy Hill Road. The tornado moved east-northeast along and just north of Highway 99C and then crossed US-377 and moved through the southern portion of the city of Madill. The tornado turned east-southeast and dissipated about 2 miles southeast of the center of Madill. EF2 damage was noted to houses and industrial buildings in the south part of Madill and to power poles along the path.				
Heavy damage occurred at J and I Manufacturing just southwest of Madill and the Oklahoma Steel and Wire on the southeast side of Madill. One person was ejected from his car and killed near the intersection of Highway 377 and Highway 99C when his car was hit by the tornado. And a truck driver from Mississippi who was making a delivery at Oklahoma Steel and Wire was outside of his truck, struck by falling debris and killed at the plant. One person was airlifted to a hospital in Plano Texas in critical condition, and an unknown number of people suffered minor injuries that did not require transport.
