

HUMPEENES

The air that surrounds our planet weights 5,000,000,000,000,000 (5 quadrillion) tons! That's 13,700,000,000 (13 billion, 700 million) Empire State Buildings!

Air is moving all the timeóswirling, blowing, sinking, rising. In summer and early fall, great masses of air move over the warm oceans. The oceans get hot, pick up lots of water and start swirling, blowing, sinking and rising.

A hurricane is born. If the hurricane moves toward the shore, powerful winds, high tides and flooding could wipe out cities, towns and farms.

Long before a hurricane hits land, the National Weather Service knows about it. Satellites have taken pictures of the storm and computers have calculated where it is going.

Hurricane Hunter airplanes fly into the storm and report more exact measurements. As it comes closer to land, special weather radars track the hurricane.

Radio, television and more than 800 NOAA Weather Radio stations warn people about the hurricane. It may reach land. Get ready!

When weather forecasters decide the storm might reach land within 2 days, they issue a Hurricane Watch.

A Watch tells people who live or work near the coast that the hurricane over the ocean might reach land. The National Weather Service will tell you what is happening. Listen to the radio or television.

Hurricane Warning

When the National Weather Service puts out a **Warning**, it means a hurricane is likely to reach land near you with winds more than 73 miles an hour! That's hard enough to blow down trees and other big objects that could hit you or your home. Ouch!

A Warning also means dangerous high water and very rough seas are expected. You definitely need to get off your boat and get to safety.

Get out when you are told.

When the hurricane hits, the sea may rise as high as 25 feet above normal high tide! That is taller than six kids standing on each other's shoulders!

This extreme high tide is called the storm surge.

The surge sinks boats, knocks down piers and floods houses. Most people who die during a hurricane drown because of inland flooding, not wind.

If you live near the shore, plan to go inland where it's safer.

In a big hurricane, the speed of the winds may be more than 150 miles an hour! Trees and houses are blown down. Windows in buildings are blown out. It rains hard. There may be flooding hundreds of miles from the coast as heavy rain falls. Watch out for flying debris.

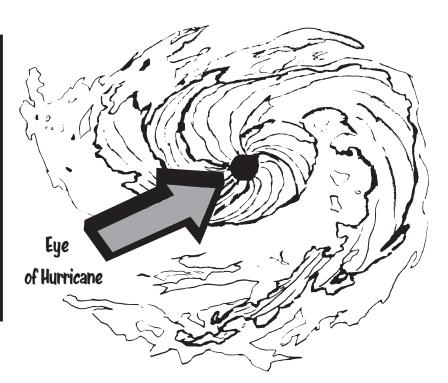

Before the Storm Comes... Put boards or storm shutters over windows. Do NOT tape the windows. Taping just leaves gunk on your windows, it doesn't protect them. Pick up all the small things laying around your yard, like toys, tools and flower pots and bring them inside. The wind could pick them up and send them slamming into windows, cars or you! If you're not close to shore, you may plan to stay in your home to ride out the storm. Clean drains and prepare for flooding.

When the Hurricane Comes . . .

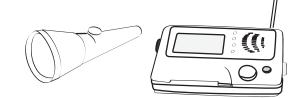

Stay indoors. Trees could fall on you. You could be blown over. Flying boards, limbs or garbage could crash into you. A live electric wire could fall on you. Intense rain may cause flooding. Often heavy rain and flooding are more dangerous than wind.

Beware of the eye of the hurricane. A hurricane is a big doughnut of wind with a calm section at the middle. That calm section is called the eye of the hurricane.

- The whole hurricane could be 300 miles across. The calm center may last from a few minutes to an hour or more.
- The sun may come out and you might think the storm is over. But it isn't. As the hurricane moves, winds will blow just as hard, but from the opposite direction.

Get a flashlight and a radio that run on batteries in case you lose electricity.

Hurricanes and

Tropical Storms can kill. Don't be caught by one!

Save and clean six 2-liter soda bottles or a large water container (as shown) for each family member. When a storm warning is announced, fill up the bottles.

Water pipes may break. Also, water from faucets may not be safe to drink for a while. Get out of its way.
Go inland. Do it
immediately!

If you ever see a big, black cloud with a funnel shaped cloud beneath it, watch out. It could be a tornado.

A tornado looks like a funnel with the fat part at the top. Inside winds may swirl up to 300 miles an hour.

If it goes through a town, the tornado could flatten homes and buildings, throw cars and trucks through the air and shatter mobile homes into splinters.

It could just hit your home and leave your neighbor's home alone or could destroy an entire town.

Sometimes you don't see the funnel first. It may be raining too hard. Or the tornado may come at night. Listen for the tornado's roarólike the sound of 1,000 trains!

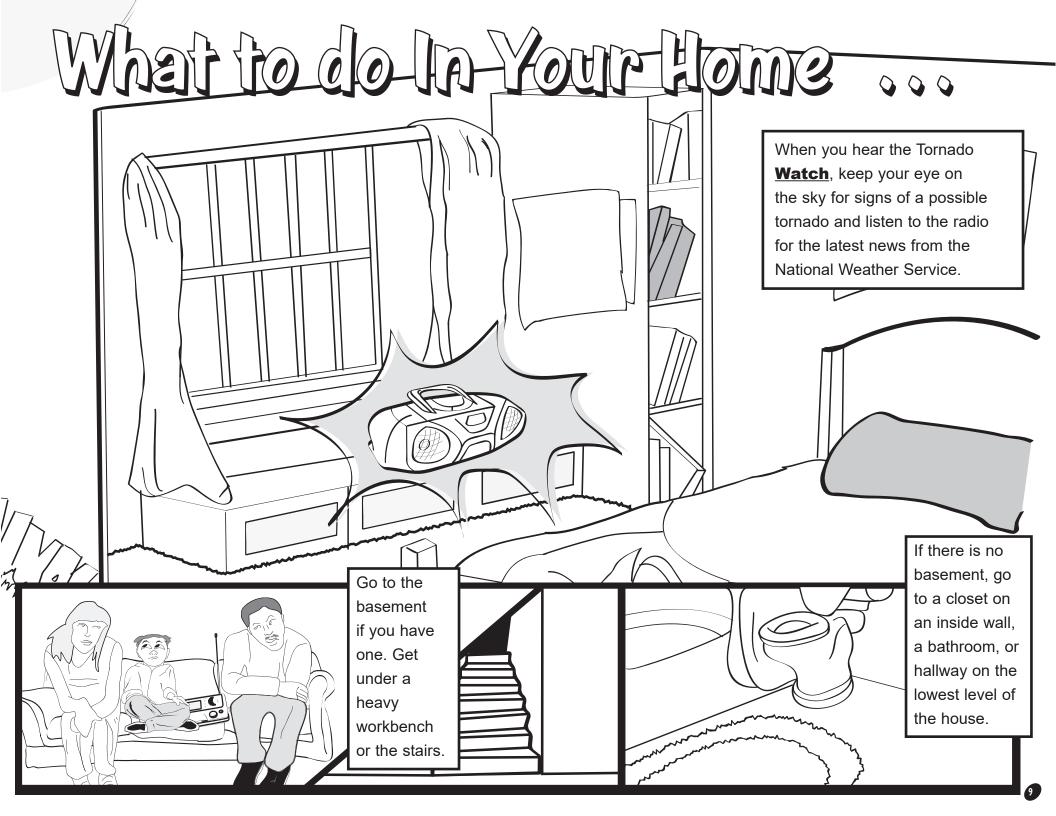

Tornado Watch

The National Weather Service forecasts that a tornado may develop later. The sky may be blue at the time you hear the Watch. Don't be fooled. Listen to the radio for the latest news and get to safety.

Tornado Warning

When someone has seen a tornado the NWS issues a **warning**, It may be moving toward you! Dark clouds swirl in the sky. There may be thunder, lightning, heavy rain or hail. When you see large hail, you may be close to a tornado. You should already be inside. Power may go off. If you are outside, go inside immediately.

man

In a Store, Office or other Building . . .

- Go to the lowest level and stay away from windows and doors.
- · Protect your head.

Outside or in a Car . . .

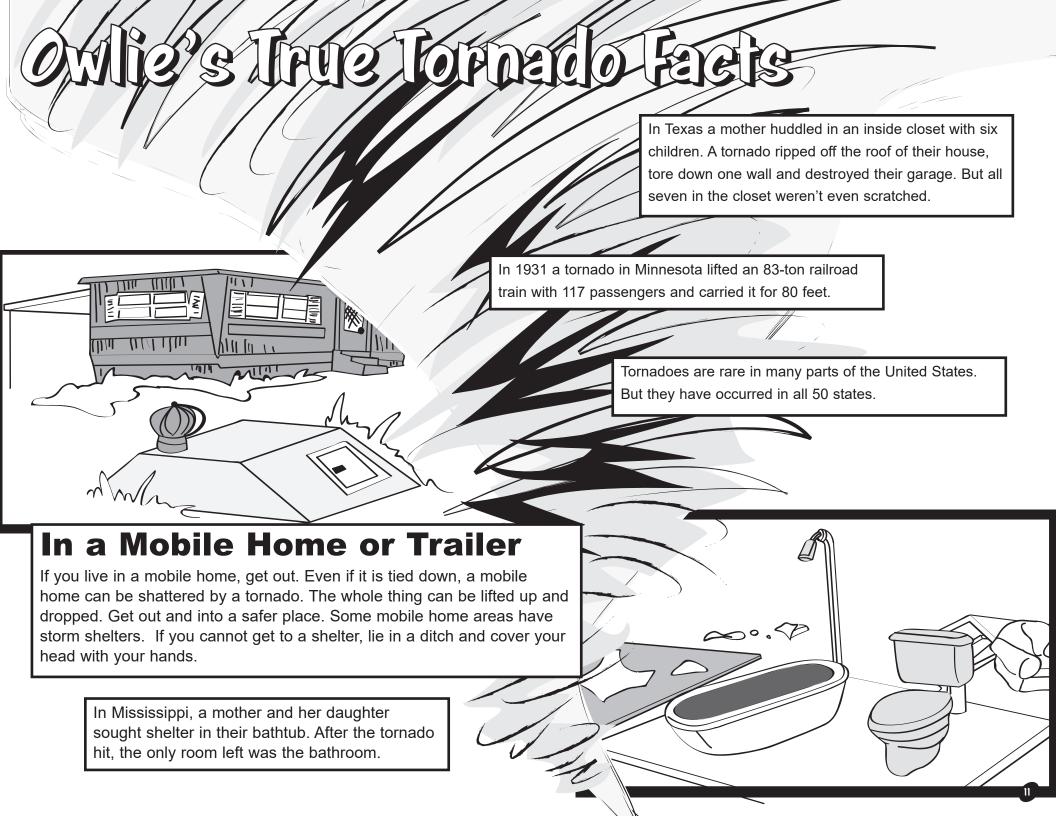

- Get out of a car and inside a house or building.
- Don't try to outrun a tornado in a car.
 Tornadoes can pick up a car and throw it through the air.
- If you're caught outside, crouch low in a ditch. Or crouch near a strong building.
- Cover your head with your hands.

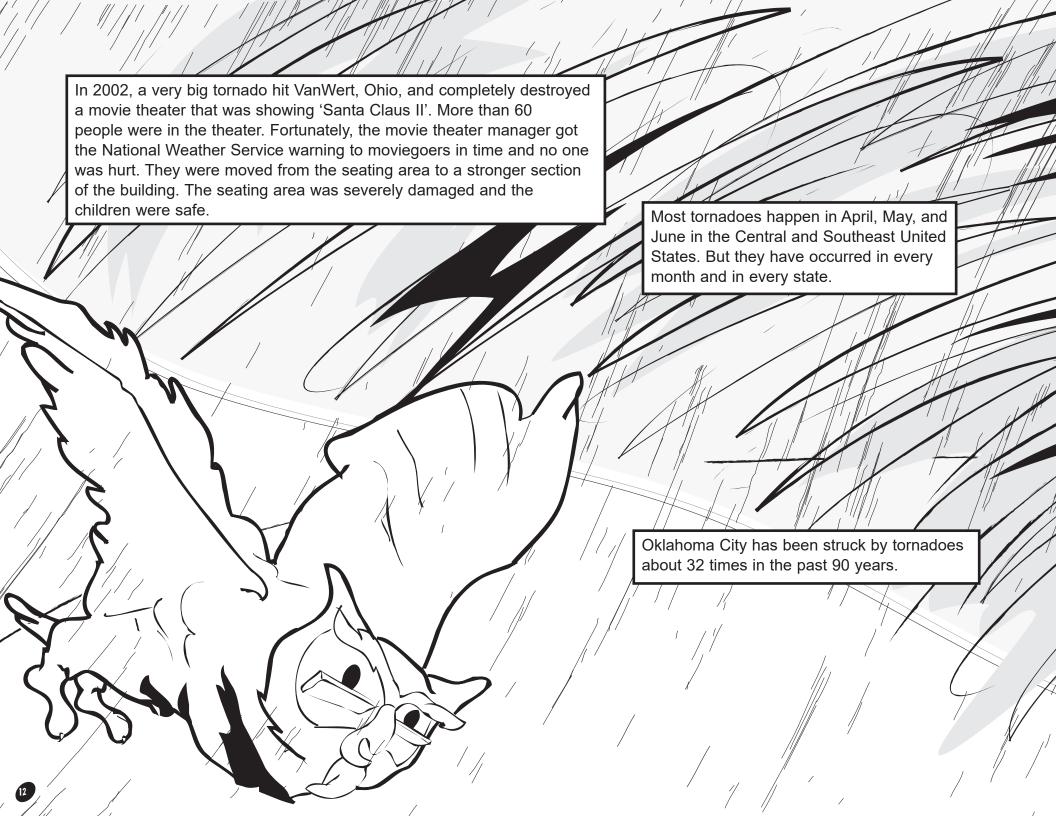

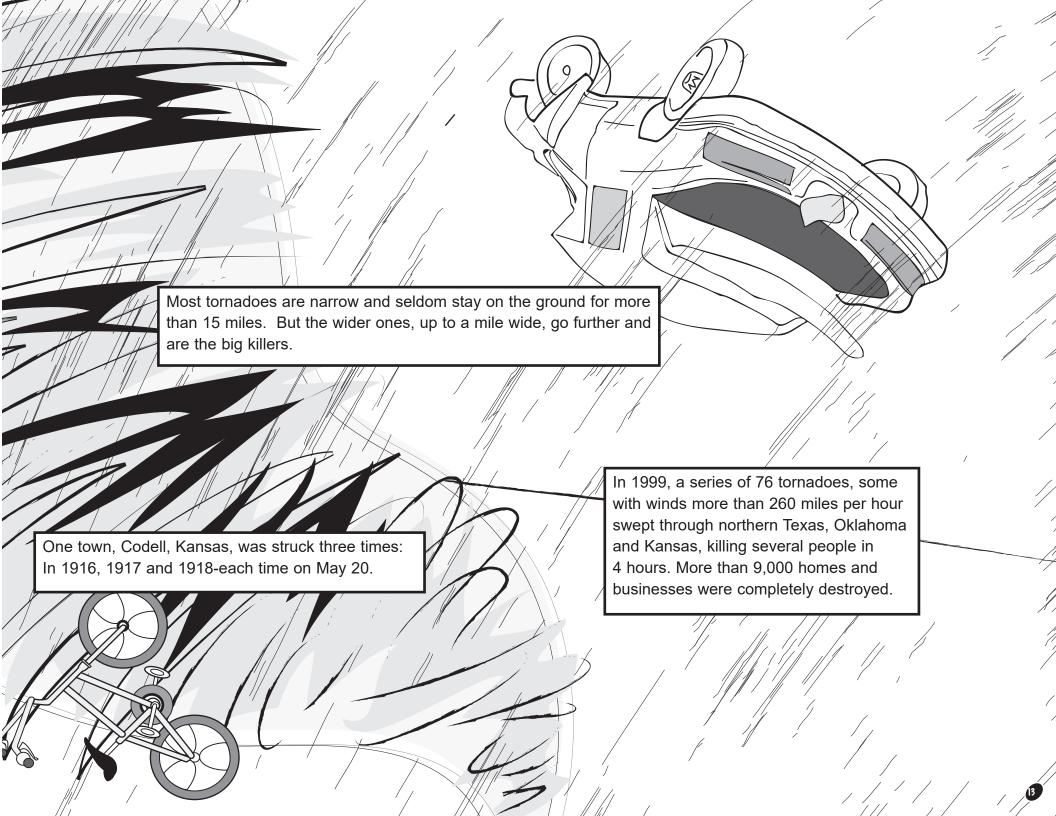

- Go to an inside hall on the lowest floor.
- Crouch near the wall. Bend over and put your hands on the back of your head.
- Keep away from glass windows and stay out of big rooms like the gym, cafeteria, or auditorium.
- Listen to NOAA Weather Radio or a battery powered radio for warnings.

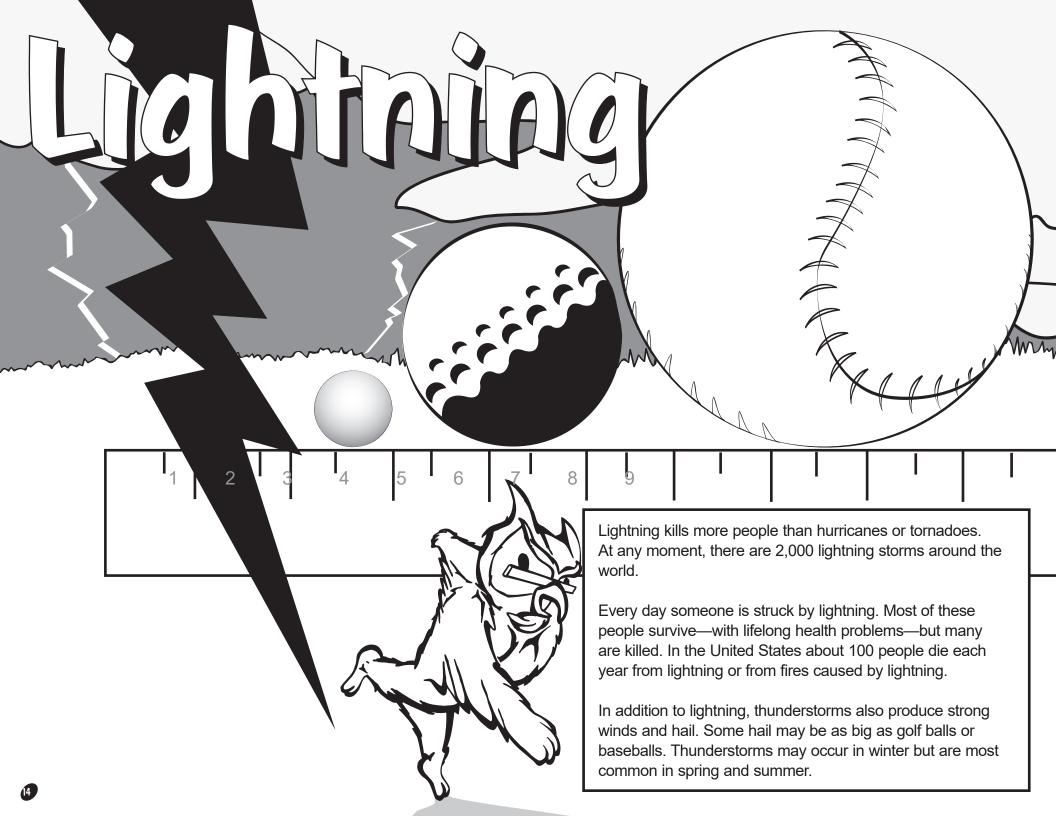

And remember, when there's a tornado there can be a lot of lightning. Stay away from anything metal—faucets, radiators, metal sinks and tubs.

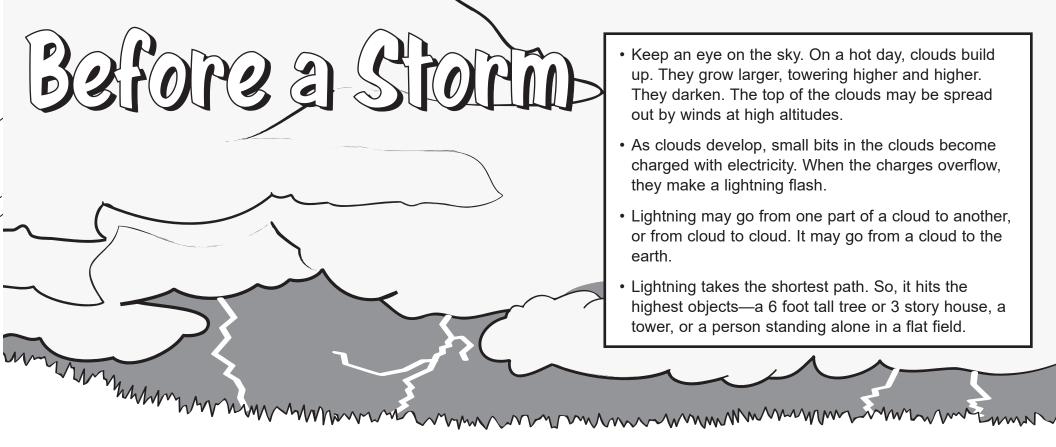

Tornadoes are scary. They pack a lot of energy, enough to blow down a whole town! But you can live through a tornado. Be smart. Know what to do, and do it.

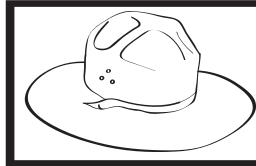

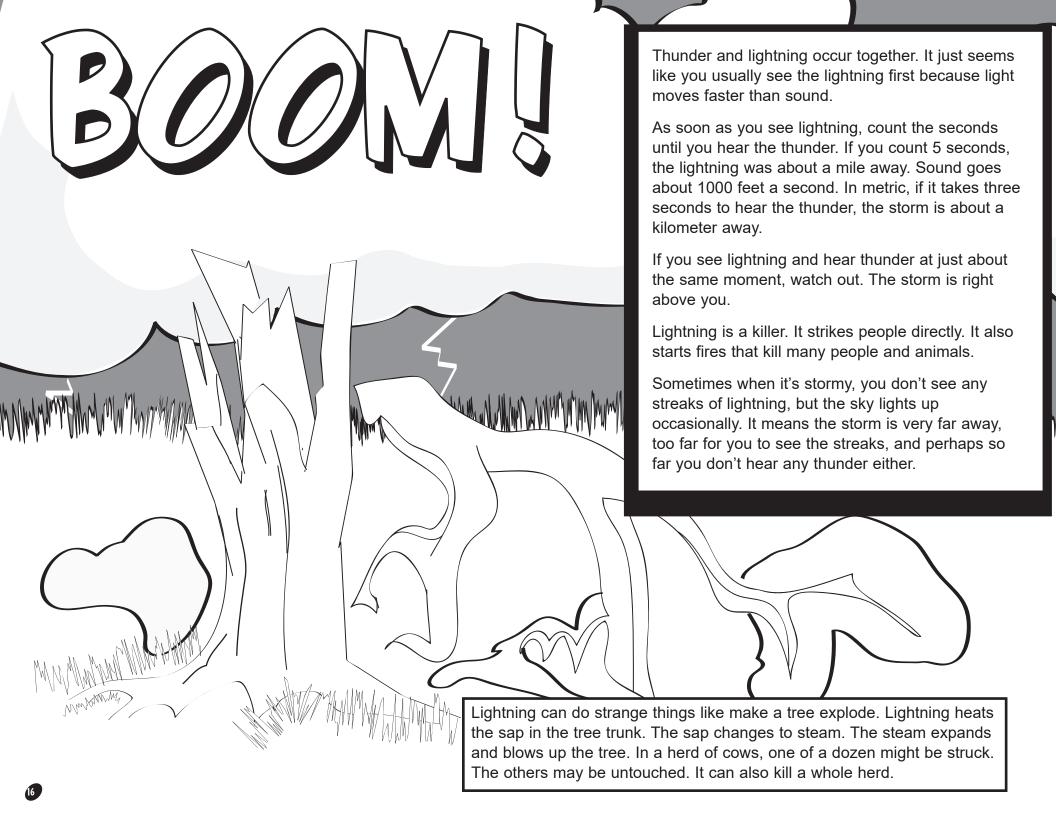

Lightning may hit the same place or person several times.

Ray Sullivan, a retired National Park Ranger, was hit 7 times by lightning. He has been knocked down, picked up and thrown into the air. He has lost his shoes and a toenail, and he can't hear as well, but at least he's still alive.

Now he lives in a mobile home with lightning rods on each end and lightning rods on trees around his home. Hopefully, lightning will follow the rods and leave Ray alone.

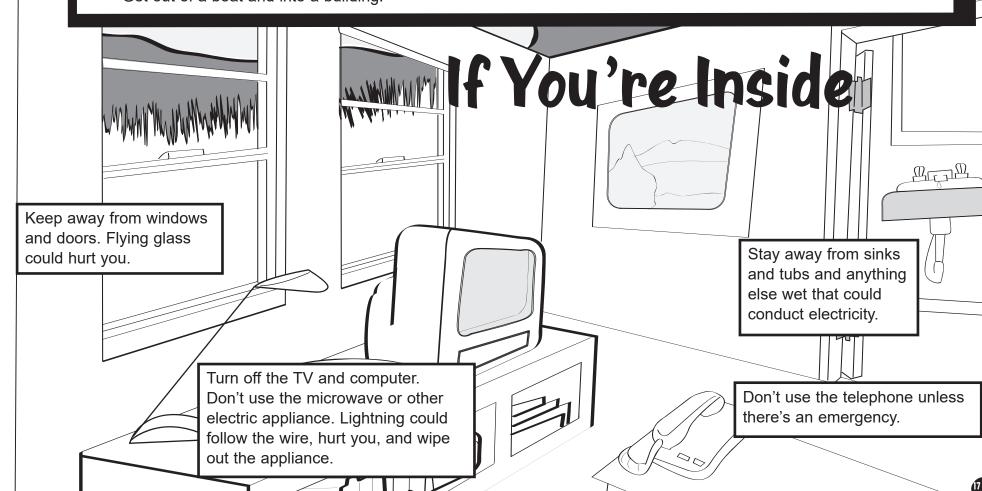

- · Get into your home or a large building.
- Get inside a hard-topped car.
- If you are in a field, crouch on your knees and bend over. Don't lie down because wet ground can carry electricity.
- If you are in water, get out. Get away from the beach.

If You are Outside

- If outside, stay in the open, not under a tree or in a picnic shelter or shed. It's better to get wet than fried!
- Lightning hits the tallest object.
- Move away from anything made of metal like a framed backpack. Metal draws electricity.
- Get to the lowest point possible if you are on a hill or mountain.
- Get out of a boat and into a building.

Floods and Flash Floods

Flash floods are fast moving water that can sweep you or your car away in seconds.

Floods are too much water on normally dry land. Rivers can flood after heavy rain has fallen over a long period of time. River flooding can last weeks or longer. River floods usually occur slowly enough to allow people and property to move to safety.

Flooding can occur anytime of the year. Some floods are seasonal, when winter or spring rains combine with melting snows and fill rivers with too much water too quickly. Other floods are associated with land-falling hurricanes and tropical storms in the summer and fall.

Whenever it rains heavily, there may be flash floods. Flash floods occur in mountain streams, canyons or dry washes. They also happen on low spots in cities and suburbs.

Flash floods can occur even though it's not raining where you are. It may be raining hard upstream, so hard, water cannot sink into the ground. Water rushes down to the stream which fills up past its banks and overflows.

A flash flood may come at you like a high wave of water. To save yourself and your parents, you need a plan.

Move to higher ground—leave everything and run. A flash flood can pick up cars, campers, vans, recreational vehicles and roll them downstream. It can tumble huge boulders, uproot trees and carry them, wash out roads and tumble bridges like matchsticks.

Stay (

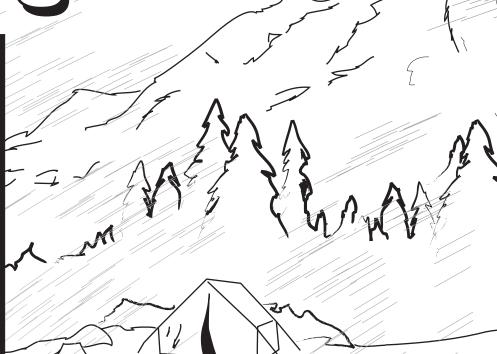

Calm

Campers

- If the weather forecast is for heavy rain, stay home.
- If you already have set up camp, stay alert. Listen to local stations on your battery powered radio.
- Watch for signs of rain—not only where you areóbut upstream.
- Plan ahead. Pick high ground for your camp. Also know how to get to even higher ground in an emergency. Check your escape route to make sure it's passable.
- Remember, seconds count. Flash floods move with lightning speed!

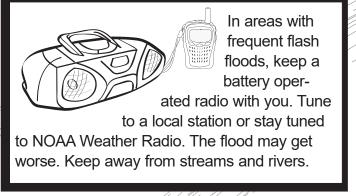

When You Are Outside

- Keep out of storm drains, irrigation ditches, dry washes or other waterways. When it rains, the water can rush through too fast for you to escape.
- There will probably be heavy lightning. Go to higher ground, but stay off hilltops.
- Don't get under lone trees. Follow lightning safety guidelines.

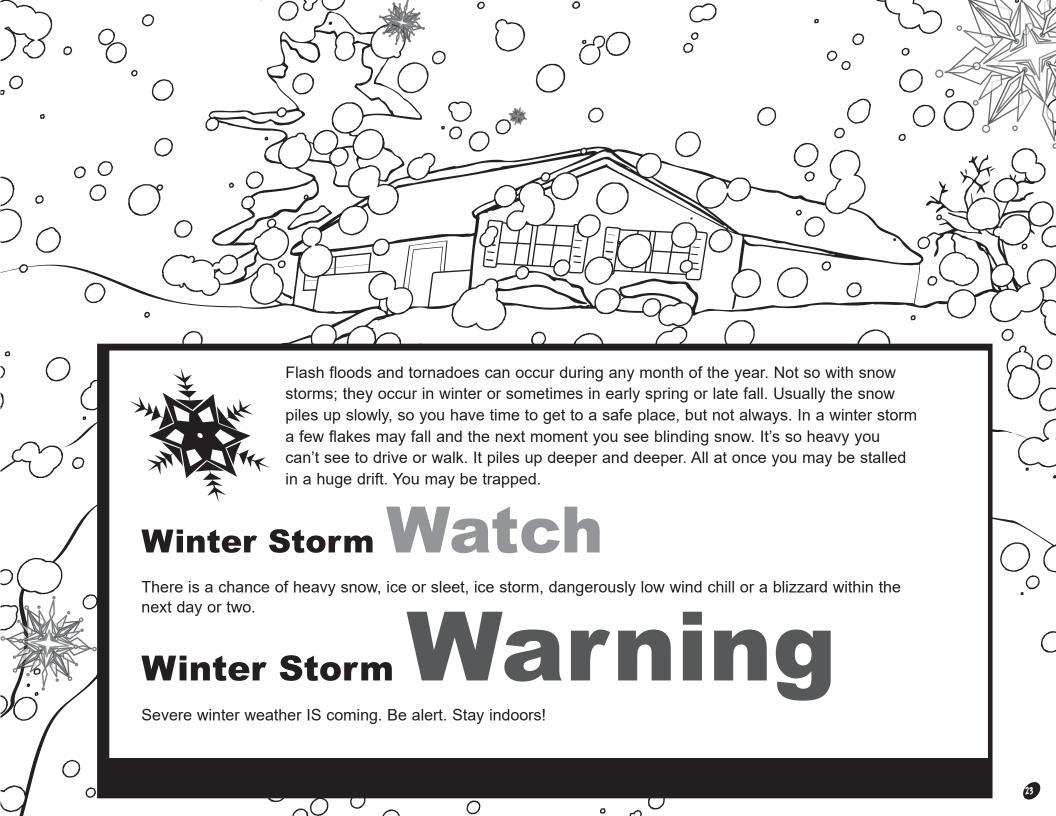

- Watch for flooding on bridges and low points in the road.
- Stay off bridges or roads under water. All of a sudden the bridge or the road could be washed out. They may not even be there under the water.
- If you are in a car, truck or other vehicle and become washed away by water, get out and swim to higher ground if you can.
- If you're riding in a car at night, be specially careful. If you drive into deep water, get out of your car. Climb to higher ground.
- If you're driving through canyon country along a stream and hear a Flash Flood Warning, leave your car and climb to higher ground. Don't try to outrun the flash flood.

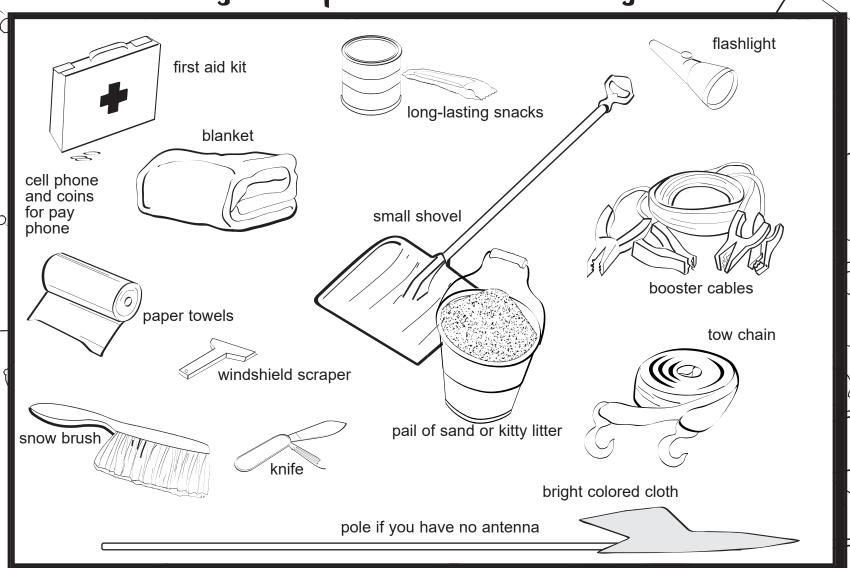

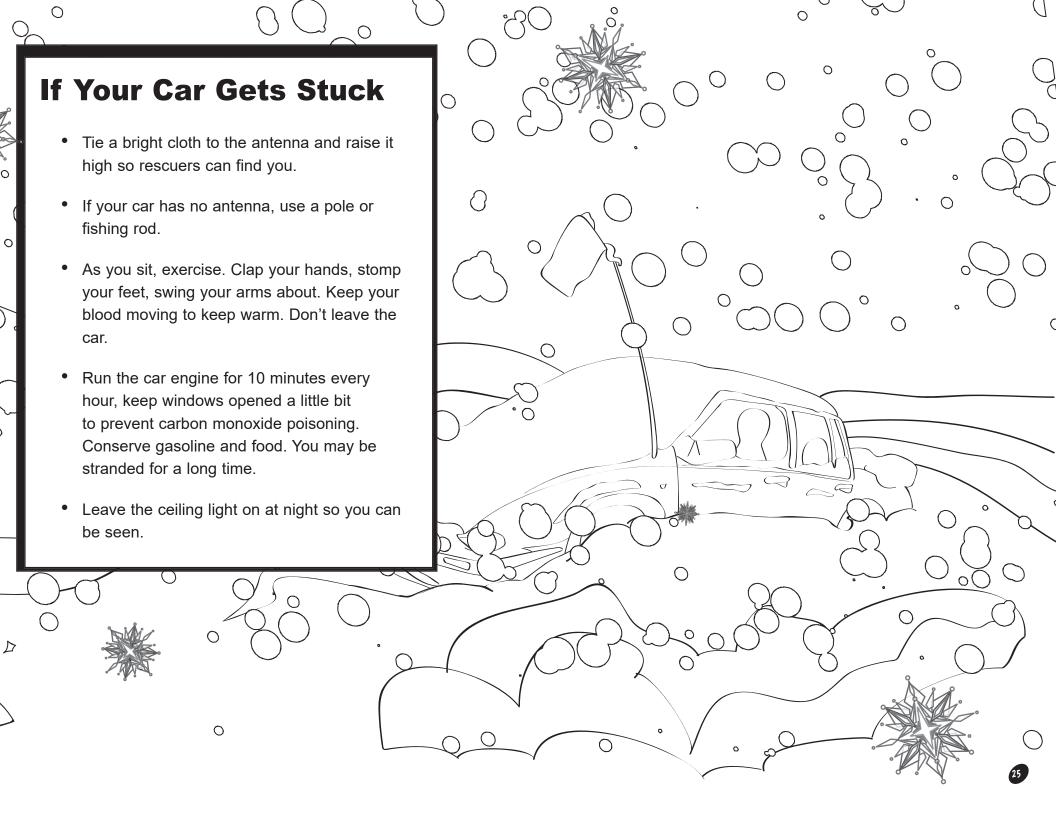

Car Safety Kits

Tell your parents to put these things in the trunk if you live somewhere that gets deep snow even occasionally:

00

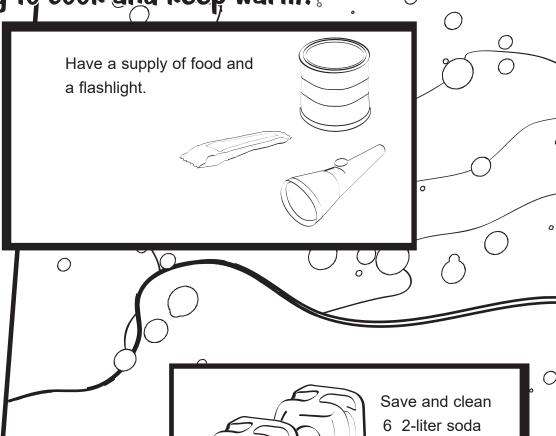

What To Do If Your ratificans

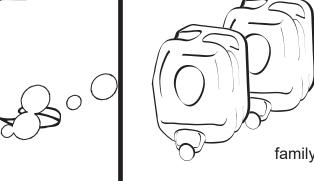

Electricity may go off. Have a way to cook and keep warm.

The furnace may not work.

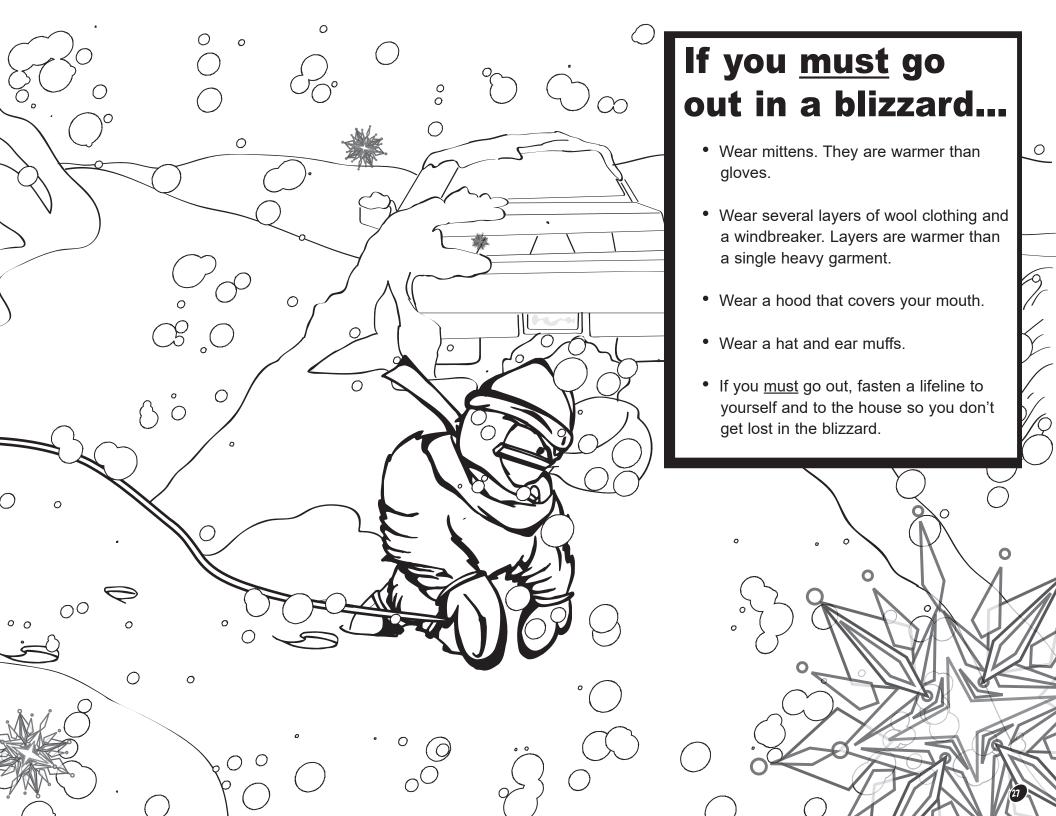

Find your battery operated radio and spare batteries.

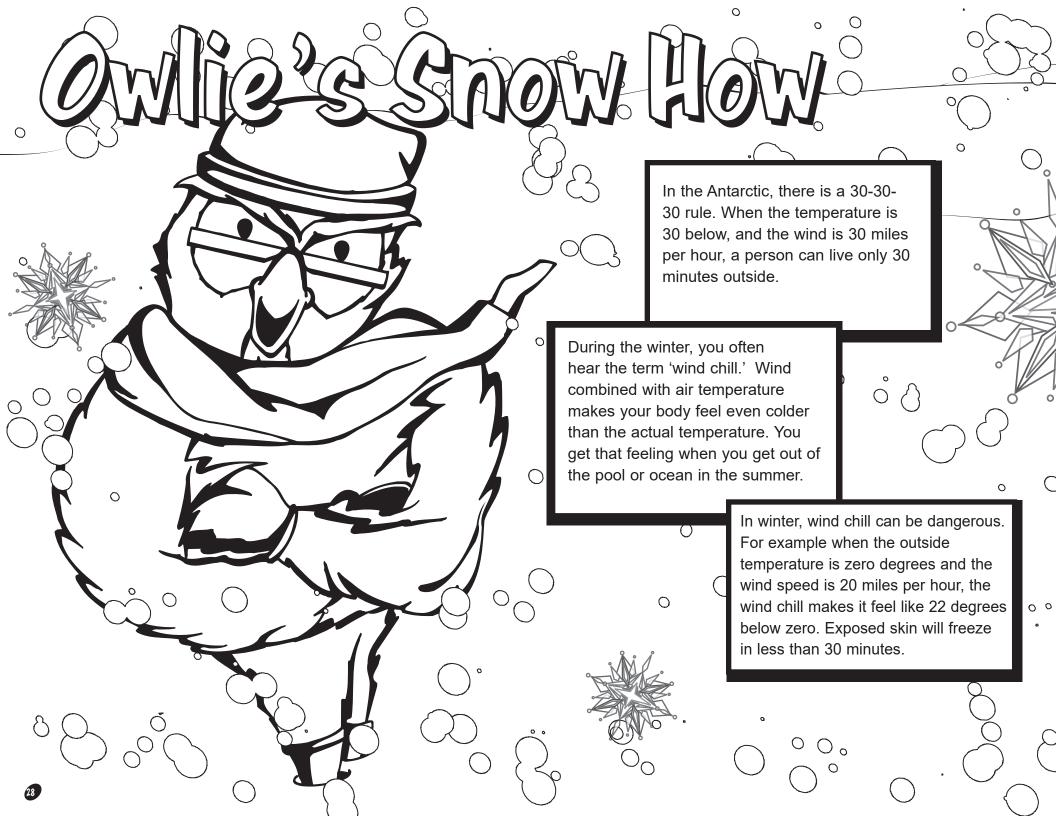

Save and clean
6 2-liter soda
bottles or a
large water
container (as
shown) for each
family member.

0 0 0 • The lowest temperature in the United States was -79.8°F (-62.1C) at Prospect Creek Camp in the Endicott Mountains of northern Alaska on January 23, 1971. • Aside from Alaska, the coldest temperature was -69.7°F (56.5C) in Rogers Pass, Montana, on January 20, 1954. • One storm from February 13-19, 1959, dumped 189 inches of snow at Mt. Shasta Ski Bowl, California. • The greatest snowfall in 24 hours in the United States was at Silver Lake, Colorado, on April 14-15, 1921, 75.8 inches. • The most snow in the U.S. in one month--390 inches (32.5 feet) fell at Tamarack, California, in January 1911. • In the winter of 1971-72, 93.5 feet (1,122 inches) of snow fell at the Rainier Paradise Ranger Station in the state of Washington. In the United States, temperatures 212 are given in Fahrenheit degrees. The Celsius temperatures (also called 194 centigrade) are used in most other countries. Lightning Quiz

Fill in the blank with the correct words. Use these words:

	ctricity explo	de shortest thunder	
1.	About 100 peop and the fires it o		ear from lightning
2.	Don't use a emergency.	unle	ess there is an
3.		and lightning oc	cur together.
4.	Lightning can m the sap in the tr		by heating
5.	Lightning hits th	e ok	ojects.
6.	Lightning takes	the	path.
7.	When lightning	forms, clouds be	ecome charged with
8.	If you are outsic under a	le when there is	lightning, don't go
9.	When lightning	strikes, it can sta _ that kills people	
10.	If you are in from the beach.		et out. Stay away

Circle T (true) or F (false) for each sentence below.

- F 1. When there is lightning, crouch under a tree.
- T F 2. When there is lightning, stay away from anything made of metal.
- T F 3. Stay by the window and watch for streaks of lightning.
- T F 4. In a storm, you usually see the lightning before you hear the thunder.
- Γ F 5. When the sky lights up, but you can't see the streaks of lightning, it means the storm is over.
- T F 6. When there is lightning, go to the highest spot on a hill and get out your umbrella for protection from the storm.
- T F 7. Every day someone is struck by lightning.
- T F 8. Lightning never strikes twice in the same place.
- T F 9. If there is lightning, call all your friends to make sure they are safe.
- T F 10. Lightning storms may occur in the winter but are most common in spring and summer.

Answers on page 43

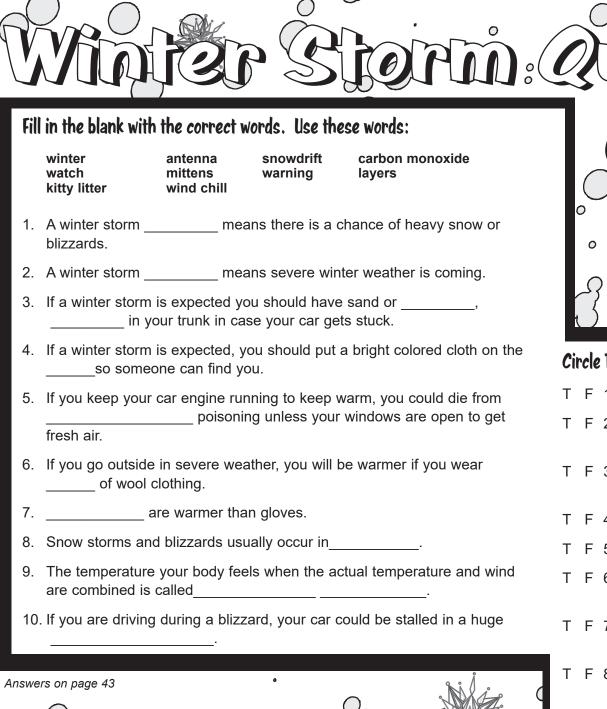

1. _____

2.

3.

4

5. _____

Make a list of supplies you should keep in your car to prepare for winter storms or blizzards.

Circle T (true) or F (false) for each sentence below.

- T F 1. During a winter storm you can be stuck in a snowdrift.
- T F 2. If your car is stuck in the snow, roll up all the windows and keep the engine running until you run out of gas.
- T F 3. If you are trapped in a car, move your hands and feet as much as possible to keep warm
- T F 4. An umbrella should be a part of your winter storm safety kit.
- T F 5. Snow storms can occur anytime of the year.
- T F 6. If your car is stuck in the snow, leave your ceiling light on at night so you can be seen.
- T F 7. Booster cables and a snow brush should be part of your winter storm car safety kit.
- T F 8. Wind chill is the combined effect of temperature and wind felt by your body.
- T F 9. Wear gloves. They are warmer than mittens.
- T F10. If your car is stuck in a snowdrift, stand on the roof wearing brightly colored mittens and wave your arms.

000

Tornedo Quiz

On the lines to the left, tell what you should do if a tornado is coming.

Circle T (true) or F (false) for each sentence below.

- T F 1. A tornado looks like a funnel with the fat part at the top.
- T F 2. You will always notice a funnel before a tornado strikes.
- T F 3. A tornado destroys everything in its path.
- T F 4. A tornado may hit your home and leave your neighborís home alone.
- T F 5. A tornado can throw cars and trucks into the air.
- T F 6. There will seldom be lightning during a tornado.
- T F 7. Go into a large room such as the school cafeteria if there is a tornado warning.
- T F 8. The sky may be blue at the time you hear a tornado watch.
- T F 9. When a tornado is coming, get out of a car and go inside a house.
- T F 10. When you hear a tornado warning, get in the car and drive as fast as you can in the opposite direction.

Fill in the blank with the correct word. Use these words:

funnel radio ditch train windows bathroom watch sky warning hail mobile home tornado black clouds basement top 1. A can flatten homes and buildings. 2. A tornado looks like a _____ with the fat part at the _____. 3. Before a tornado, you will probably see , . . . 4. A tornado is issued by the National Weather Service when a tornado may develop later. 5. A tornado is issued by the National Weather Service when a tornado has actually been seen. 6. A tornado can sound like the roar of a . . 7. If you are outside when you see a tornado, go to a low spot or a 8. The best place to be if there is a tornado is in a . . 9. There may be thunder, lighting, rain or along with the tornado. 10. If you don't have a basement, the next best place to be is in a or other small room in the center of the house. 11. Stay away from _____ during a tornado. 12. If you live in a ______, get out. It can be shattered by a

13. When you hear a Tornado Watch, keep your eyes on the

tornado.

FEST FOOD QUIZ

Fill in the blank with the correct word. Use these words:

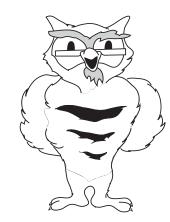

streams flash flood ground

roads

bridges

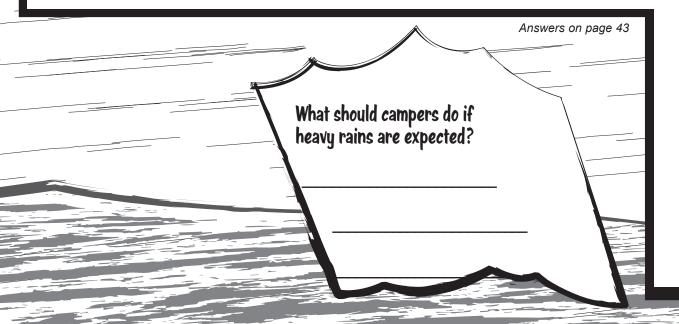

car

- 1. A flash flood can wash out _____ and bridges.
- 2. A ____ may come to you as a high wave of water.
- 3. If it is raining hard, water cannot sink into the
- 4. Flash floods most often occur in mountain
- 5. If you are driving in deep water, get out of your _ and climb to higher ground.
- 6. If you are driving in heavy rain, watch for flooding at and low points in the road.

Circle T (true) or F (false) for each sentence below.

- T F 1. When you hear a flash flood warning it means there will be a flood within 24 hours.
- T F 2. Flash floods usually occur along beaches.
- T F 3. If you are camping and a flash flood occurs, run to higher ground.
- T F 4. Along with flash floods, there is often heavy lightning.
- T F 5. Drive as fast as possible through a flooded road to avoid being washed downstream.
- T F 6. Never try to outrun a flash flood.
- T F 7. If you are camping and you hear a flash flood warning, pack up your tent and bring all your camping gear so it will not be damaged by the flood.
- T F 8. A flash flood can wash out roads and bridges and uproot trees.
- T F 9. The National Weather Service will always warn you if a flash flood is expected.
- T F 10. Whenever it rains heavily, there may be flash floods.

Answers	on page 43			

Circle T (true) or F (false) for each sentence below.

- Γ F 1. High wind is called a storm surge.
- T F 2. NOAA Weather Radio stations warn people about hurricanes.
- Γ F 3. Hurricanes usually appear suddenly and surprise everyone.
- T F 4. When a hurricane is expected to reach land in 2 days forecasters issue a Hurricane Warning.
- T F 5. Hurricane Hunter airplanes fly into a storm to get information about the hurricane.
- T F 6. Hurricane winds can reach 350 mph.
- Γ F 7. Hurricanes cause rain, high tides and flooding.
- T F 8. During a hurricane, stay under a tree.
- T F 9. Put duct tape on your windows if a hurricane is coming.
- T F 10. It is a good idea to have a flash light, radio and extra batteries if a hurricane is expected.

Weiher Hereics

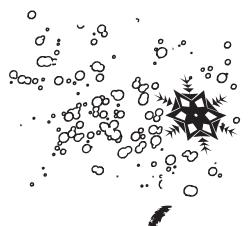

Fill in Each Space With the Most Correct Weather Hazard

Hurricane, tornado, lightning, flash flood, or winter storm

1.	The path of a	is sometimes	narrow, b	out very	destructive.

- 2. Usually before a _____ hits you see a funnel extending from a dark cloud formation.
- 3. Usually high towering clouds develop before a ______ storm.
- 4. A severe _____ can occur as late as April, which happened in 1982.
- 5. A _____ usually occurs in valleys where there are narrow stream beds.
- 6. A ______ is an extensive storm that usually develops in August or September.
- 7. In a _____ the most dangerous hazard may be flooding.
- 8. When a approaches, go to the basement or to an inside closet or hall.
- 9. When a _____ approaches, get away from the seashore, go to a safe inland location.
- 10. Don't try to outrun a _____ in your car.

You can profect yourself against weather hazards. Things to do or get, are listed below.

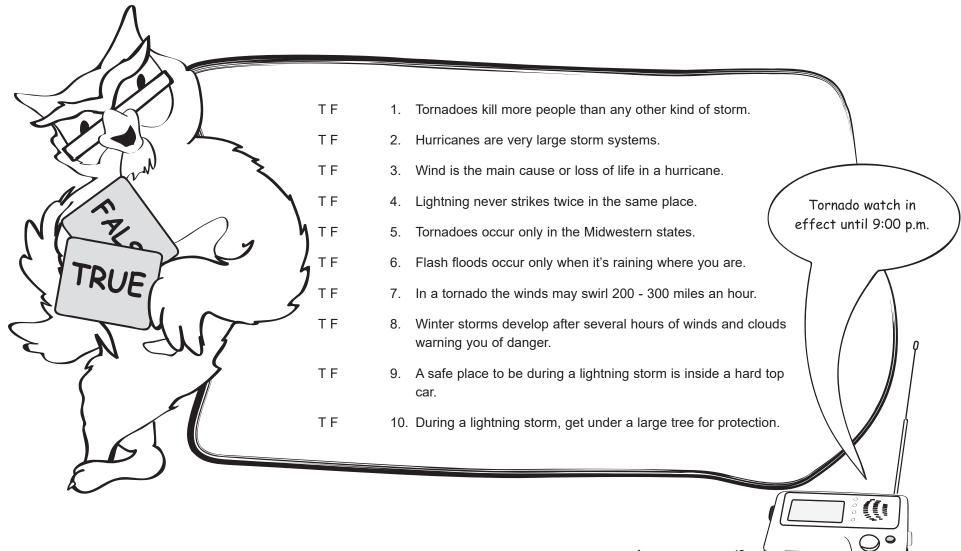

After each, write in the weather hazard or hazards, that apply.

- 1. Go to the lowest level _____
- 2. Put boards over windows _____
- 3. Stay away from windows _____
- 4. Stay in your car _____
- 5. Get out of your car _____
- 6. Stay away from metal
- 7. Stay indoors _____
- 8. Have fresh water _____
- Have a NOAA Weather Radio
 or battery powered radio ______
- 10. Cover your head with your hands _____

Check Yourself About Weather and Weather Warnings

Try these true or false questions. Ten right - you're a weather wizard; eight right - you're okay; six or less right take another look at the booklet. It may save your life.

Fill in each space with one of the answers below. Then fill in the crossword puzzle on the next page to check your answers.

Flectricity eve floods forecasts funnel hail hurricane lightning radio shortest snowstorms summer

	surge, thunder, tornado, warning, weather, or wind chill.
