Parametric information for the generation of Flash Flood Guidance products is maintained using the program PRODGEN Setup Menu.

A sub-menu for each of the items on the main menu provides an interactive capability to Add, Change, Delete or List parameter associated with the selected type.

The Add and Change option allow parameters to be read from a file

Parameters can be written to a file using the List function and then read using the Add or Change function for file input.

An example of the Setup Menu is:

```
                        SETUP MENU

               P - Products          (PROD)

               T - Text              (TEXT)

               G - Groups of Products  (GRPP)

               U - User Controls

               R - gRoups Menu (main menu)

               S - Single Products Menu

      Select (<return>-exit):
```

The purpose and description of each item on the Product Generation Setup Menu follows.

Selections Products, Texts, Groups of Products and User Controls are described in the following sections.

R - Groups Menu

This selection returns to the generation menu and displays the Groups of Products Identifiers (the first menu in PRODGEN) for generation of all products defined in a selected group.

S - Single Products Menu

This selection displays all the Product Identifiers for generation of a selected product.
